

first line of defence . . .

...against the rigours of winter

In a very real sense, the body's first line of defence is furnished by the cilia of the nose. Any damage to the mucosal cells may interfere with ciliary action and so open the way to infection. How important it is, during these months of "peak infection" risks, to choose with care the nasal drops so many patients need. Research has shown conclusively that ARGOTONE contains no substances which can harm the nasal mucosa. Presenting silver vitellin in company with ephedrine hydrochloride, ARGOTONE is quick to reduce the swollen mucous membranes and to restore permeability to the nasal sinuses—yet there is no risk that ciliary action will be inhibited.

ARGOTONE is available in a convenient plastic atomizer. Ensures swift penetration of ARGOTONE throughout the nasopharynx.

Antibiotics

In this symposium leading authorities in Great Britain and the United States review the present status of the antibiotics now available to the practitioner, with the exception of penicillin, to which a special symposium was devoted in the January, 1955, issue of *The Practitioner*. Throughout the symposium the emphasis is upon the practical aspects of the subject, and particular attention is devoted to the indications for, and contraindications to, the use of these powerful additions to our therapeutic armamentarium.

INFLUENZA treatment with **Hypon**

when its standing room only . . .

Influenzal states are unwanted companions of winter which persist in greater or lesser degree each season. Recourse to a suitable medicament becomes of paramount importance for the early abatement of symptoms.

The rapid therapeutic effect of Hypon tablets is now accepted, being of extreme value in relieving pain and reducing temperature during influenza epidemics, when time is a factor of importance to both patient and General Practitioner.

HYPON tablets possess a powerful analgesic-antipyretic action.

HYPON tablets contain Caffein to counteract mental and post-influenzal depression.

HYPON tablets also provide sufficient phenolphthalein to maintain normal peristalsis.

Indications: *Influenza, Tonsillitis, Rheumatic conditions, Spastic Dysmenorrhæa, Neuralgia.*

Formula: *Acid Acetylsalicyl. 40.22%. Phenacet. 48.00%. Caffein. 2.00%. Codein. Phosph. 0.99%. Phenolphthal. 1.04%. Excip. 7.75%. Each tablet 8 grains.*

A new
cough specific

BECANTYL

(Sodium 2:6 ditertiarybutylnaphthalene monosulphonate)

Suppresses cough with no undesirable side effects

Sodium 2:6 ditertiarybutylnaphthalene monosulphonate (Becantyl), a product of original research, is a new agent that is specific in suppressing cough. It is unrelated to morphine and guaiacol.

BECANTYL does not cause constipation, anorexia, drowsiness or any other undesirable side-effects; being devoid of side-effects, **BECANTYL** may be prescribed for children and the aged.

Clinical experience supports the value of **BECANTYL** in suppressing all types of cough, **BECANTYL** may be prescribed whenever the treatment of cough is indicated.

BECANTYL is presented in 4 fluid ounce, 40 fluid ounce, and 80 fluid ounce bottles.

REACHING HIGH LEVELS— FAST

In this jet-age speed is no less important in oral penicillin therapy than it is in aviation. The most rapid and decisive results by mouth can be achieved if the penicillin is speedily absorbed, gives a high initial destructive level, and is followed by a sustained inhibitory level at the infected focus. This is accomplished with *soluble* potassium penicillin, the form which is absorbed from the alimentary tract with great efficiency. Such is the type of penicillin presented in Crystapen Liquid and Tablets—preparations that are soluble, swift and pleasant to take.

SODIUM

(MERCAPTOMERIN SODIUM)

THE NEW MERCURIAL DIURETIC FOR SUBCUTANEOUS INJECTION

'Thiomerin' differs from other mercurial diuretics in that the mercury is in combination with an organic group plus another compound—sodium thioglycollate, which has a marked detoxicating action on the mercury. The volume of urine excreted is mainly determined by the size and frequency of the injections. Intravenous injections merely speed up the process by a few hours but have no effect on the final weight loss. 'Thiomerin' diuresis induced by subcutaneous injection (0.5 to 2 cc) is

gentle, slower in onset but equal in output to that of any other mercurial, however administered. The patient benefits, both from a painless injection and because less frequent bladder emptying, especially at night, permits much-needed rest and imposes less strain.

'Thiomerin' is indicated in
Cardiac Oedema (*peripheral or pulmonary*)
Nephritic Oedema Ascites of Liver Disease
Carefully selected cases of Subacute and Chronic Nephritis.
PACKING—'Thiomerin' is supplied in vials of 1.4 G., to which the addition of 10 cc. Water for Injection, B.P. will provide a solution containing the equivalent of 40 mg. Mercury per cc.

SENOKOT—the first standardised preparation of senna containing the total active constituents of the pod—is not a laxative in the usual sense. It restores large bowel sensitivity and reflex evacuation—without mucosal irritation. In the treatment of chronic constipation the dose required to give a comfortable formed motion is administered regularly, and as natural rhythm is established dosage is gradually reduced and finally discontinued.

Drip therapy without a tube

NULACIN

In the past, the successful treatment of many cases of peptic ulceration demanded hospital conditions. Now, by means of Nulacin Tablets, it is possible to control gastric hyperacidity without any inconvenience to the patient. By using Nulacin Tablets as directed, an ambulant patient can obtain all the advantages of intragastric milk-alkali drip therapy.

INDICATIONS

NULACIN tablets are indicated whenever neutralization of the gastric contents is required: in active and quiescent peptic ulcer, gastritis, gastric hyperacidity.

Beginning half-an-hour after food, a NULACIN tablet should be placed in the mouth and allowed to dissolve slowly. During the stage of ulcer activity, up to three tablets an hour may be required. For follow-up treatment, the suggested dosage is one or two tablets between meals.

In 'Pentoxylon' the tranquillizing, bradycardic influence of 'Rauwiloid' brand alkaloid hydrochlorides of *Rauwolfia serpentina* is allied to the prolonged vasodilating effect of pentaerythritol tetranitrate. This new combined therapy represents an important advance in the long term treatment of angina pectoris.

Although some patients will still occasionally require glyceryl trinitrate, in many others 'Pentoxylon' will provide complete relief from anginal attacks. It will also bring: "*gratifying reduction of anxiety and relief of apprehension . . .*"

North-West Med. (1955) 54: 34

Dose: 1 tablet four times a day, before meals, increased later if necessary.

'Pentoxylon' is available in tablets, each containing 1 mg. of 'Rauwiloid' and 10 mg. of pentaerythritol tetranitrate, available in bottles of 25, 100 and 500.
