is the main problem ...

Brand's Essence is a first-class protein of animal origin, in a form and strength that will not overtax a weakened system. Being partly hydrolized, it is capable of easy ingestion, digestion and absorption. It is extremely palatable, and may be taken either as a jelly or as a liquid. It helps to support convalescence and assists in restoring a positive nitrogen balance.

The major indications for the administration of Brand's Essence are loss of appetite during fatigue, acute infections, and dysphagia or digestive disturbances due to organic or bacterial lesions of the mouth, oesophagus and alimentary tract, and after surgical procedures.

The addition of Brand's Essence to low residue and weightreducing diets is especially appreciated by the patient.

Achromycin*

in Infections Involving the Liver and the Biliary Tract

ACHROMYCIN tetracycline provides an unsurpassed range of protection against the pathogens most commonly encountered in infections of the liver and biliary system. Since it is promptly distributed throughout the body tissues and fluids after oral administration, and is concentrated in the bile, it offers the additional advantages of convenience, rapid action, and relatively low dosage. It can be used with great effectiveness in infections of the gallbladder and bile ducts caused by such organisms as *E. coli*, *Strep. faecalis*, *A. aerogenes* and staphylococci. Used pre- and postoperatively, Achromycin can prove an invaluable adjunct to biliary tract surgery. Leptospirosis (Weil's disease), peritonitis due to perforated gallbladder, and traumatic rupture of the liver are conditions in which Achromycin may provide impressive benefit.

ACHROMYCIN has been effective in hepatitis—amoebic, suppurative, and viral (especially when given early in the course of the disease). Liver abscesses caused by staphylococci, amoebae, *E. coli*, *Bacteroides funduliformis*, and actinomyces may show response to Achromycin therapy.

ACHROMYCIN has been used in countless clinical cases and reported in an evergrowing number of published works from authoritative worldwide sources. The literature now abounds with testimony to its value in medical and surgical practice.

ACHROMYCIN tetracycline is available in a large variety of convenient dosage forms: Capsules, Ear Solution, Intramuscular, Intravenous, Ointment (3%), Ophthalmic Ointment (1%), Ophthalmic Powder Sterilized, Oral Suspension, Liquid Pediatric Drops, Soluble Tablets, Spersoids* Dispersible Powder, Syrup, Tablets, Troches.

crystalline penicillin V, free acid

'Distaquaine' V, containing crystalline penicillin V (free acid form), is unaffected by the gastric acidity and for this reason alone is to be preferred to other penicillins for oral administration. Furthermore, it is efficiently absorbed and offers a reliable alternative to parenteral penicillin therapy. Three preparations are available.

"No—there's a big difference, Mr. Baxter...

... as you will remember, in protamine zinc insulin, the action of the insulin is modified by the presence of a foreign protein, protamine. In contrast, I.Z.S. contains no protein or peptide material other than the insulin itself. That is its great advantage over other insulins. You see, gentlemen, the action of I.Z.S. persists for the required period by appropriate adjustment of the particle size of the insulin zinc compound. It is because the effect of I.Z.S. is entirely independent of any modifying protein, that allergic reactions following its use are virtually unknown. Any other questions?"

Milk-alkali drip therapy without a tube

NULACIN

The most effective control of gastric acidity is milk-alkali drip therapy; the most convenient way of obtaining milk-alkali drip therapy is by sucking Nulacin tablets.

Thus, Nulacin is of great value in the treatment of peptic ulcer in the ambulatory patient, and in the prevention of ulcer relapse.

Nulacin tablets are prepared from whole milk combined with dextrins and maltose, and incorporate Magnesium trisilicate 3.5 grs; Magnesium oxide 2.0 grs; Calcium carbonate 2.0 grs; Magnesium carbonate 0.5 grs; Ol. menth. pip. q.s. Their shape, size and consistency are such that, when

they are allowed to dissolve slowly in the mouth, control of gastric acidity can be achieved. Up to three tablets an hour may be required to give continuous neutralization of the gastric contents.

Nulacin tablets are not advertised to the public, have no B.P. equivalent, and may be prescribed on E.C.10. The dispensing pack of 25 tablets is free of Purchase Tax. (Price to Pharmacists is 2/-.) Also available in tubes of 12.

Nulacin is available throughout the British Commonwealth, in the U.S.A. and in many other countries. It is known as Nulactin in Canada and Sweden.

... one of the many uses for short-acting NEMBUTAL REGIDE

In the pharmaceutical field, where rapid obsolescence is the rule rather than the exception, a product that continues to grow in popularity after nearly 25 years of use must possess distinct advantages. Consider these:—.

- Short-acting NEMBUTAL can produce any desired degree of cerebral depression from mild sedation to deep hypnosis.
- The dosage required is small—only about half that of many other barbiturates.
- Hence, there's less drug to be inactivated, shorter duration of effect, wider margin of safety and little tendency towards morning-after hangover.
- In equal oral doses, no other barbiturate combines quicker, briefer, more profound effect.

Sound enough reasons for your prescription to call for short-acting NEMBUTAL.

PRO-BANTHINE* FOR ANTI-CHOLINERGIC ACTION

A Combined Neuro-Effector and Ganglion Inhibitor

Pro-Banthīne* consistently controls gastro-intestinal hypermotility and spasm and the attendant symptoms.

Pro-Banthīne is an improved anti-cholinergic compound. Its unique pharmacological properties are a decided advance in the control of the most common symptoms of smooth muscle spasm in all segments of the gastro-intestinal tract.

By controlling excess motility of the gastrointestinal tract, Pro-Banthine has found wide use¹ in the treatment of peptic ulcer, functional

diarrhoeas, and regional enteritis and ulcerative colitis. It is also valuable in the treatment of pylorospasm and spasm of the sphincter of Oddi.

It was found² that Pro-Banthīne orally was an "inhibitor of spontaneous and histamine-stimulated gastric secretion" which "resulted in marked and prolonged inhibition of the motility of the stomach, jejunum and colon . . ."

Therapy with Pro-Banthīne is remarkably free from reactions associated with para-sympathetic inhibition. Dryness of the mouth and blurred vision are less severe with Pro-Banthīne than with certain other potent anti-cholinergic agents.

In the above series², "Side effects were entirely absent in single doses of 30 or 40 mg. . . ."

Pro-Banthīne Bromide (2'-diisopropylaminoethyl xanthene-9-carboxylate methobromide) brand of propantheline bromide, is available in sugar-coated tablets of 15 mg.
