

## Practical Books for the Practising Physician

### J.A.M.A. Clinical Abstracts of Diagnosis and Treatment 1957

Published with the approval of the  
Board of Trustees, American Medical Association  
Selected by I. Phillips Frohman, M.D.

IN RESPONSE to the popular appeal of last year's "J.A.M.A. Abstracts," the 1957 volume has been published to furnish the busy physician with a practical and usable key to the latest work being done, worldwide, in diagnosis and treatment. This year the volume is again organized into sections by systems and organs of the body. For example, the advances contributed by surgery, radiology, physiology and internal medicine to the management of peptic ulcer are all to be found in one section, thereby providing a convenient and handy reference—thoroughly indexed—covering all aspects of medicine. (Just published, 572 pp., 39s.)

### Blood and Bone Marrow Patterns

#### A Color Atlas

G. Douglas Talbott, M.D., Edgar R. Hunsicker, B.S., and Jonah Li, M.D.

EMPHASIZING blood and bone marrow patterns, rather than cell morphology alone, this unusual atlas consists of skilfully taken photomicrographs especially arranged for easy reference. A new type of colour process used in the printing allows for much more faithful reproduction of colour, and much sharper retention of fine detail, thereby providing a picture that is far closer to what is really seen under the microscope than has previously been possible. (64 pp., 145 photomicrographs, 84s.)

The esters in Transvasin, a new preparation developed by Hamol S.A., our Swiss associates, readily pass the skin barrier in therapeutic quantities and enable an effective concentration of the drugs to be built up where they are needed.\* Transvasin

not only induces vasodilation of the skin with a superficial erythema, but also brings about a deep hyperaemia of the underlying tissues. It is non-irritant, and can be safely used on delicate skins. It is now being widely prescribed with successful clinical results. Since a very small quantity is sufficient for each application, the cost of treatment is extremely low.

## everything under control?

To the manifold problems of weight reduction, REVICAPS REDucing VItamin CAPSules offer a complete and well-reasoned answer. Their methylcellulose content furnishes essential bulk and their d-amphetamine sulphate suppresses appetite and elevates the mood. The result is a more contented, more co-operative patient who is far more likely to follow a reducing diet. REVICAPS also provide adequate amounts of vitamins and minerals to furnish those factors often lacking in a restricted diet. Yes—for the overweight patient on REVICAPS, it can truly be said that 'everything is under control'!

## In nervous tension and anxiety neuroses

TO RESTORE tone and tranquillity in the emotionally disturbed and overwrought patient is one of the most valuable functions of 'Mepavlon', the tranquillising drug made by I.C.I. 'Mepavlon' is distinguished by its ability to promote equanimity and to relax muscle spasm. It has proved highly effective in the treatment of anxiety neuroses, states

of tension and stress and a variety of neurological disorders.

Safety in use is a further characteristic: 'Mepavlon' has no action on the autonomic nervous system, its toxicity is low, and side effects following its use are rare.

'Mepavlon' is available in tablets of 400 mg., in packings of 30 and 250.

*WHEN A SKIN LOTION IS PREFERRED*

Prednisolone, when applied to skin lesions, exerts anti-inflammatory, anti-allergic and anti-pruritic actions similar to hydrocortisone—but concentrations only one-fifth to one-half that of the parent steroid are required. 'Hydeltracin' Topical Lotion contains 0.5 per cent of prednisolone together with 0.5 per cent of neomycin sulphate. The inclusion of neomycin ensures effective attack on most pathogenic organisms commonly found in skin lesions, and is necessary when prednisolone is used locally in the presence of infection. 'Hydeltracin' is indicated in skin lesions characterised by inflammation, with or without infection, such as: seborrhoeic dermatitis, contact dermatitis, adult eczema, infantile eczema, pruritus with lichenification, otitis externa, intertrigo.

## Urinary Tract Infections

### Urolucosil for acute infections

Active Principle: Sulphamethizole

Urolucosil is a highly soluble sulphonamide which is rapidly excreted, largely unchanged, in the urine. It is extremely effective at low dosage levels and free from side effects. Twenty-five tablets, taken over 4-7 days, usually suffice to control an acute infection.

Mandelamine is bactericidal and bacteriostatic for a wide range of pathogens, particularly those organisms most often responsible for urinary tract infections. It is non-toxic, virtually free from side effects and eminently safe for prolonged administration.

Mandelamine does not give rise to resistant strains.

### Mandelamine for chronic infections

Active Principle: Methenamine Mandelate

### Pyridium effective oral analgesic for urogenital pain

Active Principle: Phenylazo-alpha-aminopyridine Hydrochloride

Pyridium has a marked analgesic action specifically on the urogenital mucosa. It provides rapid and prolonged relief from pain and symptoms such as dysuria, frequency and strangury. Pyridium is ideal for use in conjunction with Urolucosil, Mandelamine, antibiotics and sulphonamides.

# Pattern for Today

Today, the preference is for oral rather than parenteral treatment—provided it is as effective. Penicillin-V has precisely this advantage, giving clinical results consistently comparable with injectable penicillin. It achieves this end because, unlike penicillin-G, it is remarkably stable in gastric secretion. Penicillin-V gives higher blood levels than other oral penicillins and is more potent, dose for dose. When penicillin is indicated, let Penicillin-V-Lilly be the choice.

*Average Dose:* 125mg. (200,000 units) four times daily, increased in severe infections.

PHENYLMERCURIC DINAPHTHYLMETHANE DISULPHONATE

For the treatment of fungal infections of the skin, including athlete's foot and ringworm, Penotrane has been shown in clinical practice to produce most rapid results and maximum relief. In tinea pedis particularly, the incidence of relapses which is one of the most troublesome factors, is greatly reduced (*Practitioner*, 1956, 176, 670). Penotrane solution should first be applied to the affected areas, then followed, after the solution has dried, by a liberal use of the dusting powder, especially between the toes. If continued application of the solution causes the tissues to become brittle and scaly, it should be replaced by the emollient Penotrane jelly.
