

Consultation in Verse

The surgeon liked his Guinness,
The physician liked it too,
They consulted one another
And prescribed themselves a few.
The surgeon took his colleague home
(As any good friend would)
For he had a dozen Guinness
Like every doctor should
They admitted as they quaffed the lot
Their prescribing did them good.
And would it do the same for you?
Buy Guinness and it could!

How do **YOU** tackle flat foot?

... do you prescribe an external wedge on the shoes?

BUT the wedges soon wear away; and very often the child is made to feel self-conscious because his shoes look different from other children's.

Surely it's more logical to have a wedge *built-in* between the inner and outer sole — invisible, and completely unaffected by wear or repair of the shoe. That is how Start-rite INNERAZE shoes are made; why they are the only practical solution to this problem.

Two weapons against Athlete's Foot and other fungal dermatoses

The combined use of Mycil Ointment and Powder has proved to be highly effective in both prophylaxis and treatment of fungal dermatoses.

Mycil Ointment is formulated to ensure penetration of the active constituent, chlorphenesin, to the site of the infection.

Mycil Powder, used alone, prevents reinfection. Because of its adsorptive properties it is useful in combating the effects of excessive perspiration.

Both preparations are non-mercurial and odourless and may be used over long periods, if necessary, without adverse effects.

The esters of NICOTINIC, SALICYLIC and p-AMINO BENZOIC acids bring relief to cases of arthritis and rheumatism

IN CASES OF soft-tissue rheumatism, and arthritic disorders, many doctors are tending more and more to regard Transvasin as an indispensable adjuvant to treatment.

For Transvasin is composed of the esters of nicotinic, salicylic and p-aminobenzoic acids. These esters readily pass the skin barrier in therapeutic quantities, and so enable an effective concentration of drugs to be built up where they are needed.*

Transvasin not only induces vasodilation of the skin with a superficial erythema, but also brings about a deep hyperaemia of the underlying tissues. It is non-irritant and can be safely used on delicate skins.

It is now being widely prescribed, with successful clinical results. Since a very small quantity is sufficient for each application, the cost of treatment is extremely low.

Armamentarium against tuberculosis

Wherever P.A.S. is indicated **THERAPAS** (calcium 4-benzamido-salicylate) may be used. It is better tolerated by the patient and has a slightly sweet, not unpleasant taste. **THERAPAS** is as effective as P.A.S. in delaying the emergence of streptomycin resistance. Its value in the treatment of genito-urinary tuberculosis is well established.

THERAZID is a convenient combination of 'Therapas' and 'Pycazide'. For domiciliary treatment in particular **THERAZID** is the drug of choice. Patients complaining of gastro-intestinal upset and monotony of dosage of P.A.S. and isoniazid therapy will be happier and more co-operative on **THERAZID**. Available as powder or cachets.

PYCAZIDE is the Smith & Nephew name for isoniazid. **PYCAZIDE** syrup (blackcurrant flavoured) is available to permit greater flexibility of dosage than is possible with **PYCAZIDE** tablets, and is particularly suitable in the treatment of children. One teaspoonful is approximately equivalent to 20 mg. of isoniazid.

P.A.S. and isoniazid are combined in **PYCAMISAN** cachets in five different strengths enabling "made to measure" dosage to be prescribed with the least waste of time and effort. **PYCAMISAN** cachets are practically tasteless and easy to swallow and their use offers distinct advantages in domiciliary treatment of tuberculosis.

'**PARAMISAN SODIUM**' is the sodium salt of P.A.S. (sodium aminosalicylate B.P.). It is recommended in the combined chemotherapy of all the forms of tuberculosis. It is rapidly absorbed, rapidly excreted, and of low toxicity.

The cachet form of '**PARAMISAN SODIUM**' ('**PASHETS**') makes oral dosage possible without any unpleasant taste in the mouth. Twelve cachets provide a day's requirements of the drug.

'**PARAMISAN SODIUM**' is also available in tablet form and in ampoules for local injection.

As an alternative to isoniazid **NUPASAL-213** (o-hydroxybenzal isonicotinyl hydrazone) may be used in cases which have already exhibited toxicity to isoniazid, for the toxicity of **NUPASAL-213** is virtually nil.

Dosages and presentations of any or all of these drugs will gladly be sent on request as space does not permit those details to be given in this advertisement.

ADRENOXYL

Reduces the mean bleeding-time

Adrenoxyl reduces the mean bleeding-time by decreasing the permeability and increasing the contractility and resistance of the capillary wall.

A dry field at operation

Adrenoxyl has been successful in diminishing capillary bleeding in a wide range of surgical operations. It has proved particularly useful in ear, nose and throat, ophthalmic and plastic surgery. In plastic surgery of the face it has been reported that, post-operatively, there is less swelling and bruising when Adrenoxyl has been used.

No side effects

Adrenoxyl does not have any side effects or contraindications. It does not affect blood coagulation, blood pressure or pulse rate and does not possess any sympathomimetic properties.

In medical conditions

Adrenoxyl has been used with success in those medical conditions associated with capillary fragility.

In the British Medical Journal (April 21st, 1956) a correspondent confirmed the value of Adrenoxyl in providing a dry field for the surgeon and in shortening the duration of the operation.

Packs

Ampoules: Boxes of 6 and boxes of 50.
Each ampoule contains 0.75 mg. of adrenochrome monosemicarbazone dihydrate.

Tablets: Tubes of 25 and bottles of 500.
Each tablet contains 2.5 mg. of adrenochrome monosemicarbazone dihydrate.

The best results are obtained when both tablets and ampoules are used.

Smoothly spreading...soothing, suppressing

Smoothly, without a hint of friction, Ef-Cortelan with Neomycin Skin Lotion spreads over inflamed and infected surfaces bringing swift, soothing, satisfying relief in a wide range of common dermatoses.

Suppresses Inflammation. Ef-Cortelan (hydrocortisone Glaxo) suppresses inflammation and exudation. By relieving itching it stops the scratching that is so often a cause of infection.

Suppresses Bacteria. Neomycin, an antibiotic having a wide antibacterial range but low sensitizing potential, effectively counters infection.

To these primary benefits may be added those of economy, cleanliness and ease of handling:

- * A little of the lotion does a lot of good.
- * It does not stick, sting, stain or smell.
- * The translucent squeeze bottle makes application easy and controllable.

RELEASING the surplus

In cardiac oedema and other conditions where excess fluid accumulates in the tissues, DIAMOX acetazolamide can be relied upon to release the surplus promptly and safely. DIAMOX induces diuresis in a novel and highly efficient manner—by inhibiting the enzyme carbonic anhydrase. A single dose will induce a powerful diuretic response, persisting for six to twelve hours—and in many cases of congestive heart failure DIAMOX *alone* is capable of maintaining the patient oedema-free. As clinical experience of DIAMOX grows, more and more applications are revealed—including glaucoma, toxæmias and oedema of pregnancy, epilepsy and premenstrual tension. DIAMOX has also been used in emphysema, drug-induced oedema, renal oedema and obesity.

CARNATION MILK FOR INFANT FEEDING

The digestibility of Carnation Milk

CURD FORMATION

1 Breast Milk

2 Carnation Milk diluted to
whole milk value

3 Pasteurised Milk

The milk in each flask has been curdled by the addition of pepsin. Whilst precipitating, the milks were stirred constantly. This simulated the conditions occurring in an infant's stomach. Breast milk and Carnation Milk remain liquid with a suspension of very fine curds. Pasteurised milk curdles into a solid mass. Boiled milk produces curds intermediate in size and texture between those of Carnation Milk and pasteurised milk.

Due solely to processing, Carnation Milk produces a unique curd formation — tensionless, flocculent. *The modification of cow's milk proteins essential for this curd formation occurs during the final sterilising — a process exclusive to evaporated milk.* This terminal heating induces:—

1 An increase in casein particle size together with expulsion of some "bound" water.

2 A change in the calcium salts in which there is a combining action with the phosphate ions to form colloid or semi-colloid phosphates of calcium.

These changes result in (a) soft curd properties when Carnation is acted upon by hydrogen ions in the range of gastric acidity, and (b) a reduced intensity of the

calcium-casein coagulating mechanism.

The extreme range of digestibility and tolerance of proteins, as found in Carnation Milk, is the practical advantage at the disposal of all physicians who are concerned with infant feeding. Other highly desirable advantages to those prescribing Carnation are:—

- 1 Safety, because of sterilisation *after* the Carnation cans are sealed.
- 2 Hypo-allergenic properties.
- 3 Uniformity — due to standardisation of solids.
- 4 Prophylactic D₃.
- 5 Permanently emulsified butterfat.
- 6 Accuracy of measurement.

"The Feeding of Infants" — a book specially for doctors — together with reprints of clinical investigations and Carnation feeding charts are available from: — Medical Department, General Milk Products Limited, Bush House, Aldwych, London, W.C.2.

Availability of Vitamins in Yeast

Deficiencies of single factors of the Vitamin B Group do not occur. Accordingly, even if a deficiency condition appears to result from the lack of an individual factor of the group and it is considered necessary to give intensive treatment with this factor, *the entire Vitamin B Complex should always be administered concurrently.*

It is, however, extremely important, in view of suggestions in recent publications, that the vehicle selected as a source of the entire B Complex does not withhold its vitamin content from the patient.

Few patients like the idea of a soft diet. But you'll find they do cheer up and take an interest when you tell them about Heinz Strained Foods.

These ready-to-serve, appetizing foods contain no spices or strong-flavoured seasonings. They are just freshly gathered fruits and vegetables, and choice meats, cooked to retain the maximum flavour and nutritional values. In fact the scientific care that goes into them makes them better than most home-prepared diets. The exact nutritional values of each variety of Heinz Strained Foods are set out in a special booklet. Please write for a free copy.

Here are 19 varieties from which Soft Diets can be planned :

- Beef Broth with Beef and Barley
- Beef and Liver Soup
- Bone and Vegetable Broth

**oral aminophylline therapy . . .
by producing High Blood Levels
without gastric distress**

BLOOD LEVELS OF AMINOPHYLLINE (expressed as theophylline) —produced by three methods

The valuable properties of aminophylline can now be utilized to the full, simply and effectively—by the *oral* administration of 'Theodrox'. The serious disadvantage associated with the oral dosage of *plain* aminophylline—acute gastric distress—has been overcome. A high blood level of the active component, theophylline—such as could be obtained satisfactorily only by parenteral administration—is now possible. 'Theodrox' contains aminophylline combined with specially prepared aluminium hydroxide, and gastric discomfort is reduced to a minimum. When a degree of sedation is also required, tablets of 'Theodrox' With Phenobarbitone (containing gr. ½ phenobarbitone) are indicated.

'Theodrox' tablets each contain gr. 3 aminophylline, and both forms of 'Theodrox' are available in bottles of 25, 100 and 1,000.

INDICATIONS

For the treatment of Bronchial or Cardiac Asthma; as a diuretic in Congestive Heart Failure; as a supplement to emergency treatment in Status Asthmaticus; Angina Pectoris.
