... may well bring many a patient to the surgery, revealing an anaemia of the relatively mild degree so widely encountered today. Just as frequently, however, the common hypochromic and hyperchromic anaemias may not be attributable to any definite dietary shortcomings—but may still demand the *comprehensive* treatment so well provided by PERIHEMIN Capsules. Containing all the principal haemopoietic factors known to be effective in the treatment of anaemia, PERIHEMIN reduces treatment to the simplest terms—one capsule, three times daily. PERIHEMIN Capsules are dry-filled for more rapid and complete absorption and no unpleasant after-taste.

 ergotamine tartrate 2 mgm.;

*In bottles of 10 and 100*

The prescribing of 'Migril' makes possible at last a *planned* attack upon the three predominant symptoms of migraine. Ergotamine is present at strength in 'Migril' for its specific effect upon the characteristic headache and ocular disturbances. Caffeine is present too, since it acts as a synergist to ergotamine. Frequently, however, ergotamine tends to evoke nausea and vomiting on its own account and can therefore worsen these aspects of the condition. For this reason, the potent, rapidly acting anti-emetic cyclizine is also included in 'Migril'—to overcome any tendency to nausea or vomiting, whether caused by the ergotamine or by the condition itself. And so successfully does cyclizine achieve this aim that truly effective oral doses of ergotamine can today be given—by means of 'Migril'.

*... maintain the blood sugar*

When there is difficulty in digesting fats as the result of carbohydrate shortage, the effect of Lucozade, with its glucose content and its pleasant flavour, can be quite dramatic. In fact, wherever there is a poor appetite and little power to assimilate ordinary food, Lucozade will frequently prove irresistible and quickly strengthening.

Lucozade requires no preparation. It is a lightly carbonated glucose solution with an attractive golden colour and a pleasant citrous flavour. The liquid glucose content is 23.5% w/v or about 21 calories for each fluid ounce.

NICOLANE Linctus presents narcotine for the suppression of unproductive cough, with an activity in this respect equal to or greater than codeine and the following important advantages :

It will not produce addiction as it is absolutely free from such properties associated with other opium alkaloids.

It is particularly effective against the "Allergic cough."

Tolerance and side effects are minimal and it has no adverse effects on respiration or the central nervous system.

It has a wide margin of safety and provides adequate control in oral dosage over long periods.

NICOLANE Linctus contains 15 mg. narcotine in each teaspoonful (4 ml) and is available in bottles of 4 fluid ounces.

Solprin contains aspirin in soluble form. It is a highly efficient analgesic — the more quickly and easily absorbed by reason of its solubility. Dissolved in water, the tablets produce a solution of calcium acetylsalicylate. Solprin is extremely well tolerated, even by sufferers from peptic ulcer.

Solprin will be found particularly valuable when heavy or prolonged dosage is called for.

Patients find Solprin easy to take and palatable.

## ***your Cortisone travels far***

Ox-bile from Australia provides the starting material for Roussel's manufacture of cortisone, hydrocortisone, prednisone and prednisolone. For its synthesis into these corticosteroid drugs, the ox-bile is brought more than ten thousand miles to our extensive production plant at Stratford, London. Yet even now a long road lies ahead, for the complicated synthesis involves more than a score of chemical processes, and occupies a period of several months. At every point along this supply line, vast amounts of material are needed—in order to meet the demands for Cortisyl, HydroCortisyl, DeCortisyl and PreCortisyl, both from the United Kingdom and from all over the world.

The introduction of LEDERKYN Sulphamethoxypyridazine has radically changed the pattern of sulphonamide therapy. This is the first *long-acting* antibacterial sulphonamide to be offered for clinical use, and it is fully effective at a maintenance dosage of only  $\frac{1}{2}$  Gm. daily.

*This is a reduction of some seven-eighths as compared with the typical sulpha drug dosage i.e. one tablet instead of eight.* Improved tolerance and a welcome freedom from side effects result from this dramatic dosage reduction. Moreover, the swift absorption and efficient diffusion of LEDERKYN lend further emphasis to its clinical value—especially in treating genito-urinary infections.

for the prompt and prolonged  
relief of **ASTHMA**

ISO-BRONCHISAN was first produced in 1953 and offers a fresh approach to the problem of effective asthma control. The tablets, which are pleasant to take, have a coating containing easily dissolved Isopropyl-Nor-Adrenaline, a most potent bronchodilator, which, when absorbed by the sublingual route, produces the prompt relief of bronchospasm. The rest of the tablet, when swallowed, releases Ephedrine and Theophylline in balanced proportions and these, slowly absorbed along the alimentary tract, ensure long sustained antispasmodic action on the bronchial smooth muscle.

## EMERGENCIES IN GENERAL PRACTICE

from the British Medical Journal

470 Pages (cloth bound), with full index

This book deals with medical emergencies in a wide sense; acute clinical emergencies requiring prompt and skilful treatment; conditions such as faints and fits and giddy turns, the careful elucidation of which may mean the difference to a patient between a life of activity and one of restriction; acute psychiatric states; accidents of treatment, such as dangerous reactions to drugs or collapse during anaesthesia; and emergency calls when the doctor is isolated, as on a ship.

It comprises 57 specially commissioned articles which appeared originally in the *British Medical Journal*.

The author of each is an acknowledged authority. This collection, now revised by the authors, will be of value not only to general practitioners but also to senior students, house-physicians, house-surgeons, and to those supervising their work in hospitals.

## National Health Idyll

A man may be wealthy  
But what is the use?  
If the same man's not healthy  
His life's just abuse!  
To keep his good health,  
There is many a way  
But none beats a Guinness  
Or two in the day.  
It is pleasant to taste,  
It is pleasant to smell  
But a Guinness is more –  
It's a tonic as well.

# CHAGAS' DISEASE

*successful control of the disease vector*

Assassin or Kissing bugs—Reduviid bugs of the tribe Triatomidae, notably *Triatoma infestans* and *Rhodnius prolixus*—are a commonplace pest over a wide area of Central and South America, where they are also a major menace to health, being vectors of the parasite *Trypanosoma cruzi*—the causative organism of South American Trypanosomiasis (Chagas' Disease).

Large and difficult to kill, these vicious bloodsuckers ingest blood from an infected vertebrate host, animal or human. The parasite develops within the bug and is later passed out with the faeces, infecting its victim through an abrasion, cut, bite or other such entrance.

Associated particularly with poor and primitive living conditions, both in urban and in rural

(and remote) areas, Chagas' Disease affects many millions, causing lesions of the heart muscles, skeletal muscles and central nervous system. In its secondary or cerebral stage it brings persistent lassitude and pronounced physical weakness leading frequently to death, and is therefore a problem of both sociological and economic significance in the countries where it is endemic. In the solving of this problem, dieldrin, developed by Shell, is playing an increasingly important role, being the best chlorinated hydrocarbon insecticide available for successful control of the vector bugs. In addition it is most economical in use, requiring not only a very low dosage rate but possessing such a long residual effectiveness that a single spraying frequently provides full protection for up to twelve months.

# Treatment of DIABETES MELLITUS without injections

Rastinon •Hoechst• tablets provide an oral treatment for certain diabetic patients.

**EFFECTIVE** A number of patients on small regular doses of insulin have been found to be suitable for treatment with Rastinon •Hoechst• tablets. Clinical work throughout the world has shown that approximately a quarter of all diabetics can be stabilized on Rastinon •Hoechst• tablets. A few of the more recent references to the literature are given opposite.

**SAFE** The selection and stabilization of diabetic patients should be carried out under strict medical supervision. For those patients found to be suitable, Rastinon •Hoechst• tablets provide a safe form of therapy and many have now been on oral treatment for two years. No cases of proven dyshaemopoiesis or other serious side-effects due to the drug have been reported.

**SIMPLE** From 2 to 4 tablets a day are normally all that is required to replace the insulin with its concomitant syringe, needles, swabs, and often nursing assistance as well. The normal regime of urine examination and dietary control remains necessary.

**Packs:** bottles of 100 and 500 tablets.

The basic price to the National Health Service as dispensed from a 500 tablet bottle is 2.97d per tablet and the total cost to the National Health Service, with all allowances, is less than 4d per tablet.

Each tablet contains 0.5 G. of N-Butyl-N'-toluene-p-sulphonylurea; (Tolbutamide).

## DOSAGE . . .

'Theodrox' (Brit. Pat. 727831) is a registered Trade Mark of

For oral aminophylline therapy to be fully effective it is necessary to give a dose sufficient to produce high blood theophylline levels. However, because of gastric irritation vomiting often results. Alternative therapy with enteric coated tablets or suppositories is unreliable, and parenteral aminophylline is inconvenient.

The combination of dried aluminium hydroxide gel and aminophylline in 'Theodrox' ensures full therapeutic response with the minimum of gastric upset. Reproducible blood levels comparable with those obtained from intramuscular injection can be obtained.

Recent work<sup>1,2</sup> has shown that synthetic derivatives of theophylline are mostly unsatisfactory and all are more expensive.

Each 'Theodrox' tablet contains 3 grains aminophylline and 4 grains dried aluminium hydroxide gel.

'Theodrox' is also available combined with  $\frac{1}{8}$  grain phenobarbitone where a degree of sedation is also required.

**ASTHMA:**— two tablets, repeated in 2-3 hours if necessary to control paroxysm and dyspnoea. For prophylaxis, one tablet 4 times daily.

**DIURETIC:**— two tablets initially, then one or two tablets three times daily.

**ANGINA PECTORIS:**— four to eight tablets daily. In suitable cases 'Theodrox' with Phenobarbitone tablets can replace some or all of the 'Theodrox'.

**PACKS:**— Bottles of 25, 100 and 1,000 tablets.
