## POROSITY...

Nature has her own devices for determining the extent and pattern of porosity in a sponge. But porosity in an elastic adhesive bandage should consist of extremely fine, pre-determined perforations, clinically calculated to allow free escape of skin exudates at natural body rate thus reducing maceration to a minimum.

### **ELASTOPLAST (porous) FULFILLS THIS CONDITION**

Used either in compression treatment in leg conditions or in a supportive role in strains and sprains, 'Elastoplast' elastic adhesive bandages (porous) provide a medium efficient in every respect; porosity, full stretch and regain properties, fluffy edges to prevent trauma to devitalised skin and—made to the well known Smith & Nephew high standard of quality.

In the compression treatment of leg ulcers, the limb should first be covered vertically, with overlapping strips of Elastoplast about 12" long. Small holes should be cut in that part of the strip or strips covering the ulcer to permit drainage of discharge.

An Elastoplast bandage is then applied from toes to knee, enclosing the heel. Holes are cut in the bandage overlapping the ulcer. An absorbent pad is held in place on the outside of the bandaged leg, so that it can be changed without disturbing the underlying bandage.

## CODIS AND SOLUBILITY

THE GREAT ADVANTAGE of Codis is that it provides a codeine compound tablet in which the aspirin content is soluble in water. (The codeine constituent is also soluble, and the phenacetin is in very fine suspension.)

This is achieved by careful compounding and preparation, resulting in tablets which are quickly absorbed and well tolerated—even in cases of proven intolerance to ordinary (insoluble) aspirin.

To ensure stability and easy identification, the tablets are wrapped in moisture-proof distinctive gold foils of 10 tablets each (dispensing size), or boxes containing five foils of 4 tablets each (public size).

# Only Nulacin provides intragastric milk-alkali drip therapy for the ambulatory patient

*"In view of the ineffectiveness of most of the tableted antacids, the milk alkali tablet (Nulacin) would appear to be the antacid of choice for ambulatory therapy."*

(Medical Times 1958, 1, 74)

**NULACIN TABLETS** have been developed so that when allowed to dissolve slowly in the mouth, they give continuous milk-alkali drip therapy and provide a treatment of peptic ulcer and other conditions associated with hyperacidity. Your patient will prefer  
**DECADRON**  
Trademark  
because unlike other steroids  
it promotes a *natural*  
sense of well-being

An unexpected but very acceptable finding has emerged during widespread experience with 'Decadron' in a great variety of disorders—patients report that they *feel better*. This healthy sense of *improvement* is particularly noticed by patients who have previously been treated with other steroids, and, as a result, their co-operation during a prolonged and difficult illness is much easier to obtain. Reduction in the incidence and severity of many of the side-effects associated with the older steroids (e.g., oedema and hypertension) has made possible the treatment of patients with cardiovascular disease, and the relative freedom from diabetogenic effect allows 'Decadron' to be given to diabetics when indicated. Thus, the discovery of 'Decadron' has increased still further the number of patients who may now be given the immense benefits of corticosteroid therapy.

'Decadron' (Dexamethasone) is now available in TWO strengths:  
'Decadron' 75 (0.75 mg), green, half-scored tablets. 'Decadron' (0.5 mg.), yellow, half-scored tablets.  
The United Kingdom N.H.S. basic cost is 24s. 0d. per 30 x 0.5 mg. tablets.

## Deep skin penetration in Arthritis and Rheumatism

NICOTINIC, SALICYLIC AND  
p-AMINO BENZOIC ACIDS in Ester form

IN CASES of soft-tissue rheumatism, and arthritic disorders, many doctors are tending more and more to regard Transvasin as an indispensable adjuvant to treatment.

For Transvasin is composed of the esters of nicotinic, salicylic and p-aminobenzoic acids. These esters readily pass the skin barrier in therapeutic quantities, and so enable an effective concentration of drugs to be built up where they are needed.\*

Transvasin not only induces vasodilation of the skin, with superficial erythema, but also brings about a deep hyperaemia of the underlying tissues. It is non-irritant and can be safely used on delicate skins.

It is now being widely prescribed, with successful clinical results. Since a very small quantity is sufficient for each application, the cost of treatment is extremely low.

# XYLOTOX CARTRIDGES

are now

## PERMANENTLY MARKED

Cartridges of 'Xylotox' brand lignocaine, which are being increasingly used in hospitals, are now fuse-printed, so that the markings become integral with the glass itself. This means that the marking cannot be removed even by pro-

longed immersion in liquids, or by constant handling. 'Xylotox' cartridges are thus ideal for use in Hospital Theatres, as they can be kept in sterilising fluid until required and will remain permanently marked.
