## COMPLAN provides *complete* nourishment

After head injuries or strokes, and other catastrophes causing unconsciousness, tube feeding with Complan is the simplest, most effective way of keeping the patient fully nourished. It is the same Complan which is so beneficial from the cup during the recovery stage and to the convalescent at home. Two or three cups daily of Complan (so very easily prepared) provide the high protein-vitamin-mineral intake to build up the patient to full health. In hospital or home, Complan is the simple complete answer to most feeding problems.

High tolerance is the most important factor in the replacement of iron in the anaemic patient. By prescribing FERROMYN (Ferrous Succinate) the physician is well insured against risks of nausea and other symptoms of intolerance to iron.

The mild atoxic action of FERROMYN permits maximum absorption and utilisation of the readily available iron, and produces a haemoglobin response which quickly becomes evident in the clinical improvement of the patient.

Whether the physician prefers to administer iron in tablet, capsule, or liquid form, all three are available in the FERROMYN range.

Providing these outstanding advantages :

(i) disintegration is rapid (ii) intolerance is low (iii) haemoglobin response is 1%–2% per day.

In peptic ulcer, freedom from acid means freedom from pain. With single, intermittent doses of antacids, peaks of acidity and bouts of pain are inevitable.

But when Prodexin tablets are sucked, continuous flow and efficient buffering give not merely relief, but *constant protection* from acid pain and a natural level of acidity to encourage the ulcer to heal.
