

# BUFFERIN RELIEVES RHEUMATIC AND ARTHRITIC PAINS WITHOUT CAUSING GASTRIC UPSET

**BUFFERIN** contains the exclusive combination of anti-acids called Di-Aluminate. This prevents gastric distress even when taken in massive doses as for rheumatism and arthritis.

A clinical investigation carried out at the Robert Breck Brigham Hospital in Boston showed that 70% of arthritics who had a proved intolerance to straight aspirin were able to take BUFFERIN without gastric distress. *Bufferin in the Management of Rheumatic Arthritis, J.A.M.A. 158; 386, June 4, 1955.*

**SPEED OF ACTION**—BUFFERIN works twice as fast as plain, non-soluble aspirin. *The Lancet, Feb. 6, 1960.*

BUFFERIN has no equivalent in the B.P. or National Formulary and is prescribable on E.C. 10's.

# Anabolex

the protein anabolizing, non-virilizing steroid promotes  
—a return to appetite—an increase in weight—a sense of well-being

**P**ATIENTS who are run down or who are recovering from illness frequently suffer from faulty protein metabolism. They are in negative nitrogen balance. Protein, in effect, is being broken down and lost faster than it is being built up.

Anabolex (androstanolone) restores the physiological balance. Many clinical trials have shown that, following the administration of Anabolex, there is an immediate return of the body's capacity to build up protein. The patient feels better, eats better and gains weight.

Here, then, is a physiological "tonic" with a wide therapeutic range. The weakness, lassitude, lack of energy and interest associated with many pathological states may be rapidly overcome by the administration of Anabolex.

Anabolex can be safely given to patients of all ages and both sexes; in therapeutic doses, its virilizing properties are almost negligible. The only known contra-indication is prostatic carcinoma.

*Anabolex is a  
registered trade mark*

**PRESENTATION:** In vials of 25 and 100 tablets, each tablet containing 25 mg. Androstanolone. Basic N.H.S. cost 20/- and 70/- respectively. Anabolex is exempt from purchase tax. Samples and literature will be gladly sent on application.

## Still the best sulphonamide for routine use ...

The British National Formulary 1960 again confirms the pre-eminence of sulphadimidine amongst sulphonamides and draws attention to the following advantages :—

- \* Probably the best sulphonamide for routine use.
- \* Particularly suitable for children.
- \* A compound of high activity.
- \* Produces high blood levels when given six hourly.
- \* Toxic effects are rare.
- \* Fulfils all the theoretical advantages of a sulphonamide mixture.

In addition, it is worthy of note that 'Sulphamezathine' is featured as the drug of first choice for urinary tract infections and for bacillary dysentery.

# Great Advance in Aerosol Therapy for **ASTHMA**

## PRESSURISED

# BROVON

Asthma Inhalant provides an effective therapeutic dose *within seconds*

### 1 High Production of Utilisable Aerosol

Obviously, particles of an aerosol are therapeutically useless if either:—(a) The particles are too large to pass into the respiratory bronchioles. (b) The particles are so small that they are swept back in the expired air. By Incorporation of a new and unique device, about 80% of the particles yielded by Pressurised Brovon Inhalant are within the optimum range for penetration into the finest ramifications of the bronchial tree, and absorption there.

Approximately 80% of the particles yielded by Pressurised Brovon Inhalant are utilisable—the highest proportion yet achieved in any aerosol therapy from a liquid inhalant.

Less than 30% of the particles yielded by an asthma inhalant from a hand-operated inhaler are utilisable, the remainder being too coarse.

Less than 10% of the particles yielded by conventional aerosols are utilisable; in fact, their performance is much inferior to that of a manually-operated inhaler.

### 2 Pharmacological soundness

Pressurised Brovon Inhalant combines the rapid action of adrenaline with the slower but prolonged action of atropine, providing an antispasmodic combination with an immediate yet sustained action.

### 3 Visual check on contents of bottle

... so that the user has full warning when his inhalant is running low.

### 4 Accurate dosage

An accurate metering device allows a measured quantity—and no more—to be emitted, and pressure must be released for a few seconds to allow the device to reset. Needless or unintentional over-dosage and waste are thus eliminated.

### 5 Complete safety

The propellant is non-toxic, non-inflammable and stable. The bottle is very strong and, as an additional safeguard, is enclosed in a tough, shatterproof, plastic cover which prevents splintering of the bottle if broken.

### 6 Compactness

The complete unit is smaller than even a small hand-operated inhaler and can be carried inconspicuously in the handbag or pocket.

*insoluble, non-alkaline ion-exchange resin*

Of the antacids at present available for the treatment of peptic ulcer, 'Transid' most nearly approaches the ideal, defined (in "The Pharmacological Basis of Therapeutics." 1955. (a) p. 1040; (b) p. 1032) as

"that which does not cause systemic alkalosis, does not cause 'rebound' stimulation of the secretion of acid, interferes least with digestive processes, does not cause diarrhoea or constipation, is not irritative to the stomach, does not release carbon dioxide upon reacting with hydrochloric acid and, lastly, is efficient in neutralising gastric juices."

'Transid' is active only against *excess* acid; it also reduces pepsin activity. Otherwise, 'Transid' is completely inert; it does not interfere with digestion or absorption and cannot cause alkalosis, constipation or diarrhoea. Clinical experience suggests that 'Transid' may succeed in cases of peptic ulcer in which medical treatment with orthodox antacids has failed.

#### INDICATIONS:

Peptic ulcer; gastric hyperacidity from whatever cause; dyspepsia of pregnancy.

No ill-effect can come from too much polyaminostyrene and the correct dose is that required to control the symptoms (initially, usually two to four tablets every two or three hours).

#### PACK AND PRICE:

100 tablets in foil pack, basic NHS cost, 10s.

May we send you a copy of our Standard Publication on "Transid"? It contains much more information than can be included in a journal advertisement.

# DEEP SKIN PENETRATION IN ARTHRITIS AND RHEUMATISM

## NICOTINIC, SALICYLIC AND p-AMINO BENZOIC ACIDS in Ester form

IN CASES of soft-tissue rheumatism, and arthritic disorders, many doctors are tending more and more to regard Transvasin as an indispensable adjuvant to treatment.

For Transvasin is composed of the esters of nicotinic, salicylic and p-aminobenzoic acids. These esters readily pass the skin barrier in therapeutic quantities, and so enable an effective concentration of drugs to be built up where they are needed.\*

Transvasin not only induces vasodilatation of the skin with a superficial erythema, but also brings about a deep hyperaemia of the underlying tissues. It is non-irritant and can be safely used on delicate skins.

It is now being widely prescribed, with successful clinical results. Since a very small quantity is sufficient for each application, the cost of treatment is extremely low.

*Schedule 4*

#### PACKS

Bottles of 50 and 250.

#### PRICE

Basic N.H.S. cost,

4/- for 50 tablets.

#### DOSAGE

Average adult dose,  
for oral use—2 tablets,  
up to 4 tablets may be taken  
in severe cases.

For general sedation—

1 tablet every 6 to 8 hours.

Nebrinal is a balanced combination of muscle-relaxant mephenesin and intermediate-acting pentobarbitone, presented in the form of specially designed 'timed-release' tablets to provide 'tapered' dosage.

The outer layer of the tablet rapidly releases about two-thirds of the two drugs to induce relaxation and sleep; the balance of the drugs is released from the inner core 3 to 4 hours later to sustain relaxed sleep on a reduced dosage.

The amount of barbiturate to be inactivated at any one time is thus kept low.

Nebrinal provides:

#### INDUCTION OF SLEEP

through relaxant *plus* hypnotic action

#### SUSTAINED EFFECTIVENESS

through 'timed-release' action

#### REFRESHED AWAKENING WITHOUT 'HANGOVER'

through 'tapered' dosage

# ADRENOXYL reduces the mean bleeding time...

simply ...

Adrenoxyl\* is a capillary haemostatic which reduces the mean capillary bleeding time by increasing the contractility and resistance and decreasing the permeability of the capillary wall.

\*adrenochrome monosemicarbazone dihydrate

safely ...

Adrenoxyl is safe, gives rise to no side-effects, and there are no contra-indications to its use. It does not affect pulse rate, blood pressure or blood coagulation.

effectively

Reports have been received that Adrenoxyl reduces the amount of blood lost during operation, and suggesting that it has a definite place in routine surgical procedures. It is available in ampoules for intramuscular or subcutaneous injection and in tablets for oral administration.

## THE WRIGHT respirometer

This respiratory measuring instrument for use in anaesthesia, oxygen therapy and for general application in respiratory physiology has a watch-type dial which shows at a glance the precise amount of gas that has passed through the instrument. Air resistance and inertia are extremely low, and the instrument can be plugged into any part of an anaesthetic circuit or used with a face mask for respiratory studies.

The problem of a substitute for breast milk, where a mother is unable to feed her baby herself, is most satisfactorily solved by giving Humanised Trufood. This is not an ordinary dried milk; it is cow's milk so modified that it closely resembles the natural food that a normal infant should have from birth—nothing need be added. As in human milk, lactose is the only carbohydrate present. The ratio of casein to soluble protein, as well as the total protein content, is remarkably close to that in human milk; and the high emulsification of the full fat content ensures perfect reconstitution. Further information can be obtained from Trufood Limited, 113 Newington Causeway, London, S.E.1.

# Osmosis and a non-irritant aperient

THE USE of harsh purgatives is widely, and rightly, under criticism, and it is worth drawing attention to the fact that there is a generally used aperient that operates by an entirely different principle.

Andrews functions *osmotically*. The balanced mixture of salts in its formula draws water through the walls of the bowel, increasing the fluid content. It does *not* irritate the intestine, but produces easy evacuation without griping.

The action of Andrews is thus as simple and natural as any aperient can be. It has further advantages. It is mildly alkaline, improves the flow of bile and helps to check biliousness and sick headaches. And its pleasant taste makes it readily acceptable to patients of all ages.
