The penicillin with a tradition

Crystapen is no new and virtually untried antibiotic—it's a product that has proven itself through and through during years of daily use in hospitals, clinics and doctors' surgeries the world over. Crystapen is the *soluble* form of penicillin—sodium penicillin. It dissolves readily when sterile water is added, giving a clear, pure solution. Solutions can be kept for 24 hours at room temperature or seven days if refrigerated.

Crystapen gives a high destructive level of penicillin in the blood and produces a swift clinical response. It is essential whenever a considerable overspill of penicillin from blood to tissues is required—that is whenever infections are acute, not readily susceptible or in less accessible areas. A single large daily dose has been shown by long experience to be the most effective and least expensive.

Its speed of action, certainty and safety (as well as outstanding economy) make Crystapen the logical first choice for treating most bacterial infections.

Fulcin

TRADE MARK

Forte

Halves the cost of griseofulvin treatment for ringworm infections

'FULCIN', introduced by I.C.I. in 1959, marked a new era in the treatment of fungal infections of the skin, hair and nails. Continued research has shown that the absorption of the drug when given orally is greatly improved by increasing its fineness.

'FULCIN' FORTE is 'Fulcin' in a finely divided form. It produces the same clinical response as the original 'Fulcin' at half the dosage.

Indications

- All cases of Tinea capitis and favus (avoids X-ray epilation)
- Tinea of the nails
- Tinea cruris and Tinea corporis
- Chronic ringworm of the feet
- Tinea barbae

A daily dose of 0.5 gramme (1 'FULCIN' FORTE tablet four times a day) is adequate for most cases.

The field of Chemotherapy is now so vast that it is becoming increasingly difficult for the clinician to decide which preparation should be used in any given case. Not only is the question of efficacy involved, but also that of safety. It is to help the practitioner to sort out this embarrassment of chemotherapeutic riches that the January 1962 issue of "The Practitioner" is a Special Number devoted to "Chemotherapy."

Antibiotic Research ●
GRISOVIN-FP
fine particle ●
griseofulvin for ●
greater absorption ●

Glaxo research, which first developed large-scale manufacture of griseofulvin, has produced a new fine particle form of the antibiotic. This is now marketed as GRISOVIN-FP. Griseofulvin is relatively insoluble. By reducing the particle size its absorption is substantially increased. Grisovin-FP taken orally produces blood levels equal to those obtained with the original material but in *half the dosage*. For this reason Grisovin-FP is issued in a tablet of 125 mg which is equivalent to the original 250 mg tablet in the production of griseofulvin blood levels. The reduced particle size is purely a physical change and in all other respects but one Grisovin-FP is identical with the griseofulvin so extensively, and so successfully, used for the treatment of fungal skin infections. The exception is the price—Grisovin-FP costs much less.
