## Practical Malariology

PAUL F. RUSSELL, L. S. WEST, R. D. MANWELL &amp; GEORGE MACDONALD

This book is intended for the malariologist, parasitologist or entomologist working in the field or the laboratory and its emphasis is on thoroughness and on ease of translation into practice, giving the reader authoritative statements on every aspect of the subject. Full details of the biological and taxonomic background of the parasite and the mosquito lead to comprehensive and eminently practical accounts of field and laboratory technique. A comprehensive set of keys of all plasmodial species of man, other mammals, birds and reptiles, and of the adult and larval forms of mosquitoes in all parts of the world are included.

## A Textbook of Malaria Eradication

EMILIO PAMPANA

Since 1955 the eradication of malaria has become the final objective of all antimalaria activities and a need has been felt by the large number of workers involved in these ventures for a textbook giving complete details. Until the results of some eradication programmes became known it was not possible to write more than a theoretical essay on the subject. But now that at least the preliminary results of some of these programmes are known and the reasons for the setbacks and temporary failures evaluated it has become possible to prepare this textbook. It will appeal to all who have to deal with malaria eradication and has been written in a style which will readily be understood not only by medical personnel but by administrators, technicians and workers in the field.

## Garrod's Inborn Errors of Metabolism

*A Reprint of the First Edition, with a Supplement by H. HARRIS*

Garrod's book is justifiably regarded as a classic, and in view of the dramatic advances in human biochemical genetics made during the past few years it is appropriate that it should once more be made available. The Supplement contains a bibliography of the writings of Garrod, a reprint of the key sections of his important paper published in *The Lancet* in 1902, and a new section entitled 'The Inborn Errors Today' by Professor Harry Harris. This section provides an outline of the way Garrod's original concepts have been elaborated and extended by some of the more recent work on inherited metabolic disease and other inborn biochemical differences between human beings.

## An Introduction to Human Physiology

J. H. GREEN

This book, which provides a completely up-to-date introduction to human physiology together with a brief introduction to biochemistry, has been specially written for medical students who are just starting their course and who already have some knowledge of chemistry, physics, and biology, up to 1st M.B. standard. It should also prove useful to dental students, physiotherapy students and as a textbook for a short course in physiology.

The book gives, in a clear and concise manner, the basic concepts of human physiology unobscured by controversy and provides a framework to which additional knowledge may be added by the attendance at systematic lectures and by consulting the larger textbooks, reviews and original papers. A brief guide to this additional reading is given at the end of each chapter.

## Methods of Psychiatric Research

AN INTRODUCTION FOR CLINICAL PSYCHIATRISTS

*Edited by* P. SAINSBURY & N. KREITMAN

The purpose of these contributions is to provide an introduction to clinical research in psychiatry. It is addressed primarily to the clinical psychiatrist in the mental hospital and other workers in the mental health field who want to do clinical research but who hesitate because of uncertainty of how to proceed. Intended as a guide for the beginner its emphasis is on practical procedures; thus there are chapters on choosing a suitable topic, the use of libraries, and how to obtain financial support. There are chapters on design and method, special techniques, survey methods, genetic investigations, and research with the individual patient. Finally there is a chapter on the preparation of scientific papers for publication.

## The Medical Care of Children

*Edited by* S. D. M. COURT

This book has been written primarily by a group of paediatricians, working in hospital, for their colleagues in family practice. They have made a selection of the common and important paediatric problems at each stage of childhood and shown, with the help of case histories, how they were dealt with. Much of what it has to say, especially the sections on 'Everyday Questions,' 'Development and Developmental Disorders,' 'What Can We Prevent?,' and 'Adoption,' will be helpful to doctors in the Public Health Service. As it stresses principles rather than details it should appeal to students and to paediatric residents in hospital.

REPORTS ON RESEARCH AND TEACHING 1962

*Edited by* JOHN PEMBERTON

This book is based on the papers read at the third scientific conference of the International Epidemiological Association held at Korcula, Yugoslavia, in 1961. Thirty-five papers have been selected and these have been extensively revised, and some entirely rewritten, to bring them up to date; the authors were selected on an international basis. The book is divided into eight main sections: cancer; diarrhoeal diseases; arterial pressure; occupational diseases and accidents; neurological diseases. anaemia, and nephropathy; standardization of diagnostic techniques; health services, and recent developments in the teaching of social medicine.

## An Introduction to Medical Genetics

J. A. FRASER ROBERTS

Since the second edition was published the chief new development in human genetics has been the discovery of a wide variety of chromosome abnormalities; a new chapter has been added dealing with this subject. There have also been a number of advances in the blood groups, including the discovery of a sex-linked blood group—these have necessitated extensive revision of the chapter on the genetics of the blood groups. All chapters have been thoroughly revised and new sections added dealing with biochemical genetics and drug-induced disease.

Nineteen illustrations have been provided, including seven karyotypes.

and there are facts which could explain this. For one thing, Broxil, compared with oral penicillin V, has a very high absorption rate<sup>2</sup> and gives very high tissue levels. It is therefore quickly and effectively bactericidal at the site of infection.

Broxil is also bactericidal to some penicillin G and V resistant staphylococci<sup>3</sup>, which of course means greater certainty in therapy.

---

It is not surprising that these advantages produce measurable advances in clinical efficiency. For example, it has been possible to count in days the saving of recovery time achieved by using Broxil in upper respiratory tract infections<sup>1</sup>, while many physicians have recorded its effectiveness in other indications.<sup>4,5,6,7,8</sup>

griseofulvin for  
greater absorption

## DURATION OF TREATMENT

Treatment should be continued for at least four weeks, but it must vary with the site and nature of infection. Thus treatment should be extended for infections involving the nails or where the keratin layer is thickened as in the soles of the feet; in such cases, it is best continued for at least two weeks after clinical symptoms have disappeared. GrisoVIN-FP given orally exerts its activity systemically, and endows newly formed keratin with the power to resist fungal attack. The time taken for this resistant barrier to reach the surface completely will vary with the different structures, e.g. thin body skin, thickened palms and soles, hair and nails etc. Cure is demonstrably complete when it is no longer possible to see the fungus microscopically or by culture, but the infected skin in most cases shows a rapid and remarkable improvement in a very short time.

## CLINICAL USE

Grisovin-FP given by mouth, has remarkable activity against dermatophyte (tinea) infections of the skin, hair and nails. Accurate diagnosis and selection of cases is desirable, and it should be recognised that minor superficial fungal infections can often be successfully treated by topical remedies.

## DOSAGE

The significance of griseofulvin blood levels and their duration in relation to therapeutic effectiveness is not yet clearly established. As judged by comparative ability to produce blood levels, the dosage of GrisoVIN-FP usually employed for adults is likely to be four tablets (500 mg) daily. Higher dosage may be needed in some cases to produce full therapeutic effect and in such instances up to eight tablets (1.0 gram) or more daily, may be given, at least for a period. Correspondingly, dosage for children usually will be two or three tablets (250 or 375 mg) daily.

# The importance of simplicity in the treatment of diabetes

The diabetic is condemned to a life-time of medication to control his condition. In few other conditions is simplicity and ease of administration so important. The introduction of the sulphonylureas eight years ago relieved one group of diabetics from the burden of daily injections. The extensive use of Rastinon in oral antidiabetic therapy for over two million patients has shown that it is not only one of the safest drugs available, but also one of the most effective in controlling diabetes when the condition is first discovered at middle age. Rastinon is the standard oral treatment of diabetes, and it is remarkable for its

safety, simplicity, economy and effectiveness.

**The effectiveness of the coal-tar and allantoin combination in Alphosyl Lotion is well known and is confirmed nearly every week. Only two years after its introduction in this country, it became the leading branded preparation for the treatment of psoriasis. Now Alphosyl is also available as a lubricating cream.**

### Good Results

Extensive clinical trials show the effectiveness of Alphosyl Cream. In a study of 41 patients<sup>1</sup> response was good to excellent in 36 patients, complete clearance being achieved in 27 cases. In another study of 96 cases<sup>2</sup> some of

whom had had psoriasis for many years, 73 obtained 75%-100% clearance and another 15 had 50%-75% clearance.

### Advantages

The cream has been found a particularly effective vehicle for the Alphosyl formula. The new vehicle incorporates a combination of free fatty acids (saturated and unsaturated), naturally occurring in triglycerides, sterols and esters to give the lipid phase of the base a significant resemblance to the lipid array of normal human skin. There are also present certain bipolar (hydrophilic-lipophilic) substances which enhance the uptake and retention of

moisture by the amphoteric proteins of the stratum corneum<sup>1</sup>.

Alphosyl Cream is cosmetically acceptable in every way, being non-greasy, non-staining and virtually odourless. Its lubricating properties have been found specially valuable in psoriatic lesions of the scalp, in fissured areas, especially on the palms, and for intertriginous areas generally.<sup>1</sup> It has been found notably safe, being free from the risks found with x-ray, corticosteroids, mercury, arsenicals etc.

Literature is available on request.

# TRANSVASIN RELIEVES MUSCLE SPASM

Muscle spasm caused by physical injury or rheumatic lesions, including osteo or rheumatoid arthritis, is rapidly relieved by the application of Transvasin. The esters of nicotinic, salicylic and p-aminobenzoic acids penetrate the skin and are concentrated at the point of injury. Transvasin is an effective and economical therapy.

*Transvasin contains ethyl and n-hexyl nicotinate, ethyl p-aminobenzoate, 2% each, and tetrahydrofurfuryl salicylate 14%. The N.H.S. price of the 30g. tube is 2/6d and the cost of an average application of the Cream is under 1d.*

# ATROMID-S

TRADE MARK

Ethyl Chlorophenoxyisobutyrate (I.C.I. 28,257)

Because of the evidence that ethyl chlorophenoxyisobutyrate exerts a profound lipid lowering effect 'Atromid'-S is being issued by I.C.I. for physicians wishing to use it for the treatment of lipid disorders.

Further studies are in progress to determine whether this compound alone exerts the full beneficial effects of 'Atromid'—a combination of ethyl chlorophenoxyisobutyrate and androsterone—which in addition to reducing the serum lipid levels also favourably affects disorders of thrombogenicity.

## PRESENTATION

'ATROMID'-S is presented in red, soft-gelatin capsules each containing 250 mg. of ethyl chlorophenoxyisobutyrate

## Low-sodium Diets

Restriction of the sodium intake is sometimes unavoidable in cardiac or renal disease, or in pregnancy. Unfortunately, meals prepared without salt tend to be insipid and the diet may soon become monotonous.

Salt-free Marmite imparts a pleasant savoury taste to soups and stews and is therefore popular with patients who have to adhere to a low-sodium diet. It is also appreciated as a sandwich spread or as a flavouring for egg dishes. Moreover, it improves the nutritional value of the diet by providing all known factors of the vitamin B complex.

## SERVICES

## A PRACTICE AS WIDE AS THE WORLD

In the Medical Branch of the Royal Air Force you gain wide clinical experience. You travel the world and among the subjects with which you will become familiar are tropical medicine, rescue operations, the care of airborne patients and medicine in relation to flying. You will also be expected to contribute to research.

As Medical Officer on a Royal Air Force Station you have a vigorous general practice among the officers, men and their families. You enjoy complete clinical freedom in charge of sick quarters with your own beds, and you will be assisted by a well-trained nursing and clerical staff. You and your family can live comfortably and near your surgery.

Your salary and career prospects are good: as a married man drawing full allowances you could receive £2000 per year on entry. If you have post-graduate civilian experience you could be granted up to seven years back-dated seniority. Pensionable career commissions or short service engagements entitling you to a generous tax-free gratuity on completion are still available to the right applicants.

### GRADUATES AND MEDICAL STUDENTS

If you are a pre-registration year graduate or a senior medical student you may apply for a commissioned cadetship. This will enable you to finish your pre-registration house jobs or medical training as an officer in the R.A.F. drawing full pay and certain allowances. On completion you will serve on a long or short service engagement in the Medical Branch of the Service.

For details of entry to the Royal Air Force as a registered doctor, a graduate or a medical student, write to the Director-General of Medical Services, Air Ministry (M.A.I.), (HN53M), 1 Tavistock Square, London, WC1.

**TRYPTIZOL**

the antidepressant with intrinsic tranquillising properties

TRYPTIZOL is an outstanding antidepressant, particu-  
larly valuable for its tranquillising effect on the anxiety  
and insomnia—characteristically early morning awaken-  
ing—which so often accompany depression.

TRYPTIZOL is indicated in all forms and presentations  
of depression. Other symptoms which respond well  
include functional somatic complaints, loss of interest,  
loss of appetite, feelings of guilt, slowing of emotional  
and physical reactions.

TRYPTIZOL is singularly free of serious toxic side  
reactions. It is *not* a monoamine oxidase inhibitor.

TRYPTIZOL (amitriptyline hydrochloride) is supplied as tablets of  
25 mg and 10 mg, as a syrup and as an injection. Detailed information  
on indications, dosage, administration, precautions and bibliography is  
available on request.

*Medihaler*-Ergotamine offers unique advantages in the treatment of migraine and recurrent vascular headaches. An entirely new route, oral inhalation, enables ergotamine to provide the speed and degree of relief expected only of injections. Yet *Medihaler*-Ergotamine is as simple to use and carry as a tablet. Attacks are aborted by a much smaller dose than is needed orally, with correspondingly less risk of side-effects. One to three inhalations ensure profound relief in most cases, at a cost of only 3d to 9d per treatment. Basic NHS prices are: complete unit 17/4, refill 15/-.

*Medihaler*-Ergotamine contains Ergotamine Tartrate B.P. 9 mg./ml. and delivers 60 measured doses (0.36 mg. per dose).
