a new approach in treatment

## 'TRYPTIZOL' SYRUP

Amitriptyline pamoate

REGD

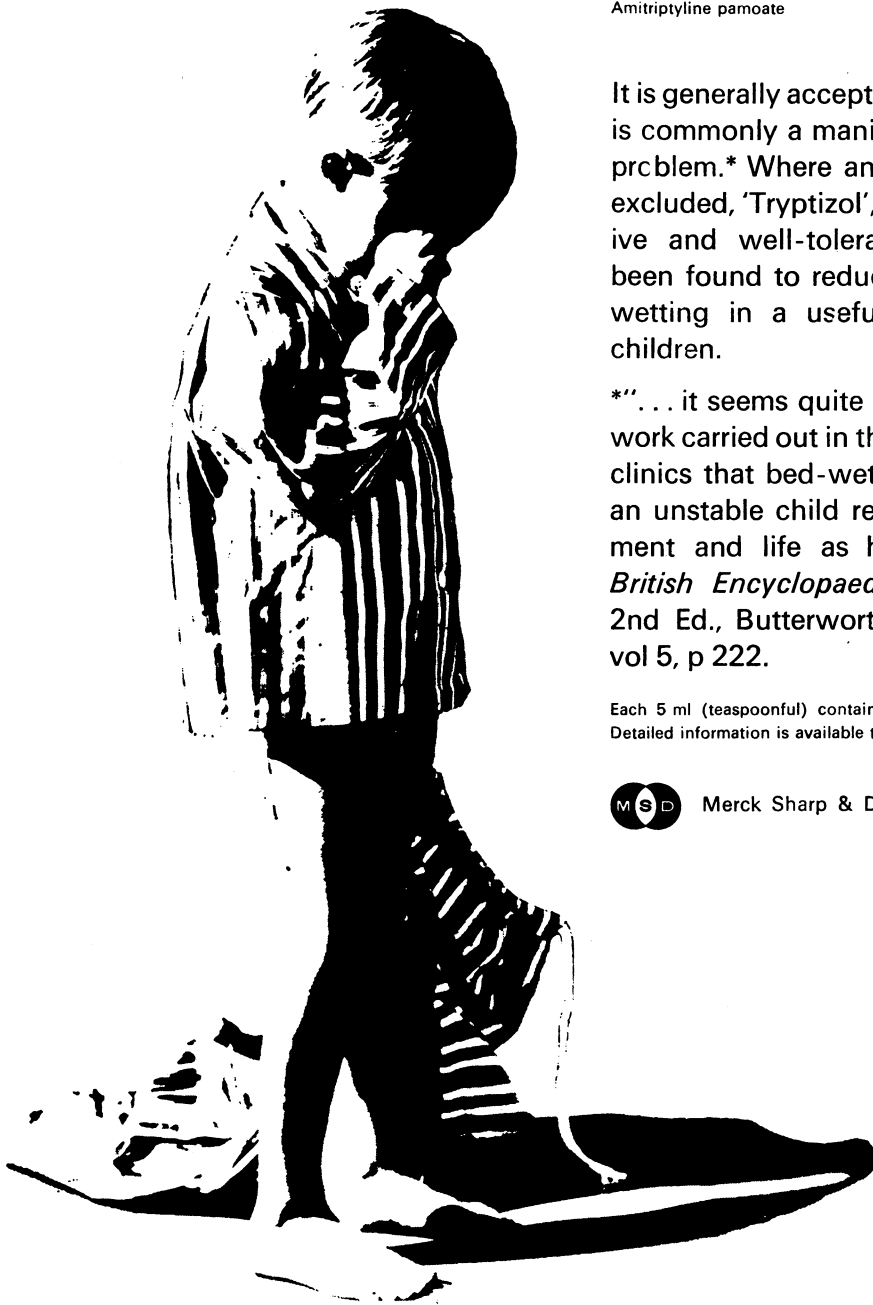

It is generally accepted that nocturnal enuresis is commonly a manifestation of an emotional problem.\* Where an organic cause has been excluded, 'Tryptizol', well known as an effective and well-tolerated antidepressant, has been found to reduce the incidence of bed-wetting in a useful proportion of affected children.

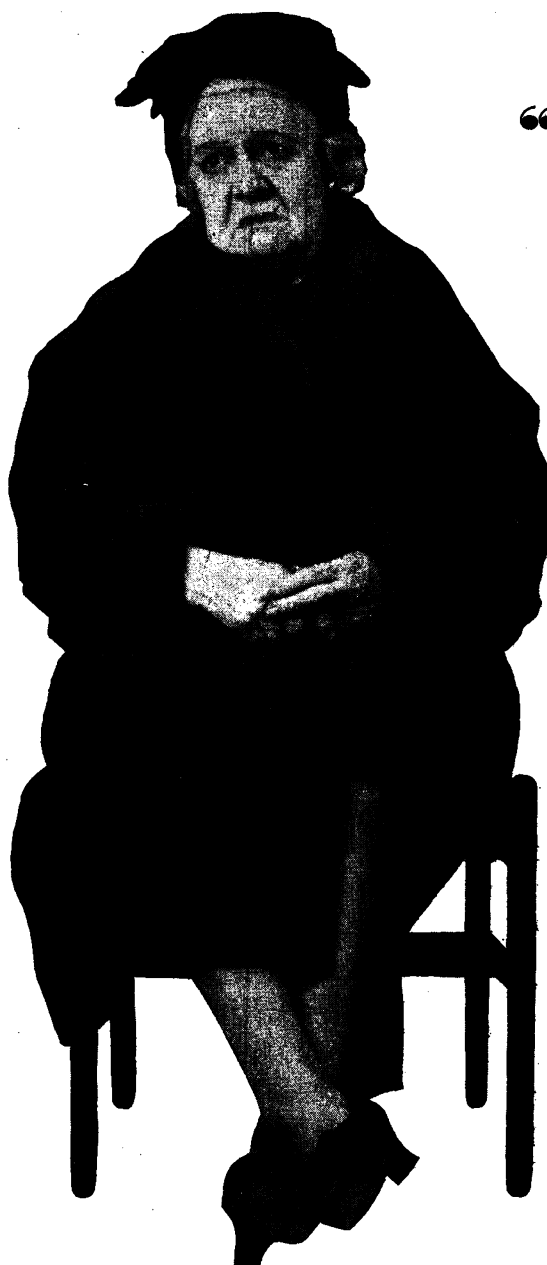

"... it seems quite clearly established by the work carried out in the modern child guidance clinics that bed-wetting is a frequent sign of an unstable child reacting badly to environment and life as he or she finds it." *The British Encyclopaedia of Medical Practice*, 2nd Ed., Butterworth & Co., London, 1951, vol 5, p 222.

Each 5 ml (teaspoonful) contains 10 mg amitriptyline (as the pamoate). Detailed information is available to physicians on request.

Merck Sharp & Dohme Limited, Hoddesdon, Herts

“Doctor,  
I feel awful”

Once she might have been diagnosed as “anxiety state”. Today, you know she might be a depressive, but it doesn't seem as simple as all that. The truth of the matter is that patients don't always fit neatly into diagnostic categories. They may suffer from such diverse symptoms as depression, agitation, loss of appetite and tension-fatigue at the same time.

The great strength of ‘Aventyl’ is that its beneficial actions range widely over the symptoms which plague these

problem patients. ‘Aventyl’ is not merely an anti-depressant, nor is it a combination of drugs. It is a *single substance* which relieves a constellation of mental and emotional symptoms embracing depression, anxiety and their effects on awareness and mood.

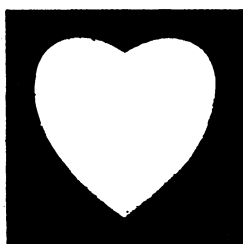

*‘Aventyl’ is not a monoamine oxidase inhibitor, and no serious side-effects have been reported at the recommended dosage.*

# BRITISH HEART FOUNDATION

*Patron: HRH Prince Philip,  
Duke of Edinburgh, KG, KT*

The British Heart Foundation is carrying out a broad-based programme of medical research into causes of heart disease and their treatment. In the year 1963/4 £276,000 was allocated in grants to approved scientists who had submitted their projects. In the current year £35,000 has already been promised, and work supported by the Foundation is now being carried out in some fifty centres—ranging from world-famous medical schools to the general practitioner's surgery. These research activities depend entirely upon the success of the Heart Appeal, for which an initial target of £3,500,000 has been set. Unless money continues to come in fast, important scientific projects now under consideration will be held up. The eventual aim is to provide for expenditure of £500,000 *per annum*—the minimum required to finance an adequate programme.

Life Membership of the Foundation is open for a single payment of 100 gns. or more (or £10 per annum on a seven-year Covenant). Ordinary Members are welcome at 5 gns. per year (£3.5.0d. on a seven-year Covenant).

Forms of application for research grants may be obtained from the Secretary, British Heart Foundation, (Dept. B.M. 5), Tavistock Square, London WC1. The next closing date is 31st October, 1964.

## The problem of the dirty mouth

Even in 1964 the dangers, and the unpleasantness, of the dirty mouth are still present in the post-operative period, as well as in many fevers; the geriatric patient being especially prone to them. Careful attention to oral hygiene will usually, of course, keep the patient comfortable and prevent complications. Such attention, however, is very time-consuming to the nurse; and it is not often realised that for most patients it can be replaced or supplemented by the use of chewing gum.

The regular use of chewing gum, by stimulating salivary flow, keeps the mouth clean in the most natural way possible. The patient is in a sense providing his own nursing care with the minimum of energy expenditure by himself.

Child patients, of course, need no encouragement to chew gum. The older patient may need encouraging—but not once he has appreciated the very obvious cleansing and refreshing effect that chewing gum has upon the mouth. Chewing gum is also of value to patients who are forbidden to smoke.

## of a NAVAL MEDICAL OFFICER

**This is a life of unbounded opportunity.** Anywhere in the world, you practise medicine with complete medical freedom. Among 100,000 Naval men and women you gain extensive medical experience of the most varied nature. Civilian patients, too, of both sexes and all ages, are treated in Naval hospitals. You have excellent opportunities for specialising in the normal clinical subjects, and in the less usual, such as Nuclear, Underwater, and Aviation medicine. You are actively encouraged and financially assisted to acquire higher degrees. You can gain consultant status.

As a Medical Officer, your pay, allowances, and gratuity—or permanent commission pension—are very good: for example, your initial pay is considerably higher than that of a civilian hospital registrar. You can enter in one of three ways:

as a registered Medical Practitioner—your civilian experience back-dating seniority—or as a qualified doctor doing your pre-registration year, or as a student with a 2nd M.B. For qualified women doctors, there is a special short service commission. For fullest details of your Royal Navy life as a Medical Officer, write, mentioning your own qualifications and age to: **The Medical Director-General of the Navy, Medical Dept. (HN66/B), Empress State Building, London, S.W.6.**

## DANDRUFF

Penofome exhibits the following advantages over other preparations for the treatment of dandruff:—

1. Dual fungicidal and bactericidal activity against *Pityrosporum* and secondary bacterial invaders.
2. Unique penetrating properties into the skin and hair follicles.
3. Unique protein-substantive properties promoting adsorption onto the scalp and hair.
4. This penetration and adsorption fixes the active ingredient into the scalp and hair affording prolonged protection against recurrence of infection.
5. Non-staining and pleasant to use.

*N.B. Other uses of this valuable wide-range antiseptic cleansing agent (suitably diluted) include vaginal toilet, cleansing the skin and in burns and ringworm.*

## "AN EFFECTIVE DRUG FOR TREATING ANGINA PECTORIS"<sup>3</sup>

Synadrin reduces the incidence of anginal attacks during long-term treatment by producing a prolonged improvement in the coronary blood supply. Its effectiveness has been shown by a number of double blind studies,<sup>1-7</sup> and it is indicated in all forms of ischaemic heart disease.<sup>8-15</sup>

Synadrin tablets contain 15 mg. prenylamine lactate. Treatment is initiated with two tablets three times a day and this dose may be reduced as beneficial effects become apparent.

### RELIEVES SYMPTOMS, PROMOTES A SENSE OF WELL-BEING

It has been found that practically every ptotic patient experienced relief of symptoms, increased energy and sense of well-being following application of proper support.

The doctor can rely upon Spencer for *proper support* because each Spencer is individually designed, cut, and made for each patient from detailed measurements and a complete description of that patient's body and posture.

With a Spencer, the co-relation of abdominal and back support induces correct posture, modifies an unfavourable tilt. Ptosed organs are lifted to normal position to improve circulation. Better digestion, elimination, respiration often result.

# IRON on an empty stomach

To prescribe iron before breakfast would be asking for trouble with ordinary ferrous sulphate tablets. Even taken after meals and in divided doses, such tablets cause irritation and unpleasant side effects in many patients, often leading to the abandonment of therapy.

But "One **FERRO-GRADUMET**® tablet before breakfast" is right. This once-daily haematinic is made to be taken on an empty stomach, for the Ferro-Gradumet is a unique approach to the treatment of iron-deficiency anaemia. Just one tablet daily, before breakfast, gives steady, trouble-free assimilation of ample amounts of iron. Instead of releasing a corrosively large dose of ferrous sulphate in the stomach, the Gradumet slowly leaches out its contents over a period of hours throughout the gastro-intestinal tract until, finally, the empty matrix is excreted.

The secret of the Gradumet lies in this inert sponge-like matrix, the pores of which are permeated with ferrous sulphate and a soluble "channelling agent". The pre-determined release pattern, which is independent of body chemistry, retains the greater part of the ferrous sulphate until the tablet has passed out of the stomach into the small intestine, where it is better absorbed with less irritation.

Each Ferro-Gradumet tablet contains the exsiccated equivalent of 525 mg ferrous sulphate, providing 105 mg elemental iron—a sufficient daily dose in all cases of iron-deficiency anaemia.

**PRESENTATION** Each red Filmtab® (film-coated tablet, Abbott) contains 525 mg ferrous sulphate (in exsiccated form), equivalent to 105 mg elemental iron.

## Clinical tests confirm Alphosyl's effectiveness

Accumulating evidence increasingly underlines Alphosyl's effectiveness in cases of psoriasis, even in those that have proved intractable to other forms of treatment. Its success is attested by the fact that after only 2 years Alphosyl Lotion became the leading branded preparation for psoriasis in this country.

**New Alphosyl Cream** Following the success of Alphosyl Lotion, this coal-tar and allantoin combination is now available in Britain as a lubricating cream. The cream base has proved a particularly effective vehicle for Alphosyl as it incorporates a combination of free fatty acids (saturated and unsaturated) naturally occurring in triglycerides, sterols and esters to give the lipid phase of the base a significant resemblance to the lipid array of normal human skin<sup>1</sup>.

**Clinical Trials** The table below gives the results of four different clinical trials which show the effectiveness of Alphosyl in lotion and in cream form.

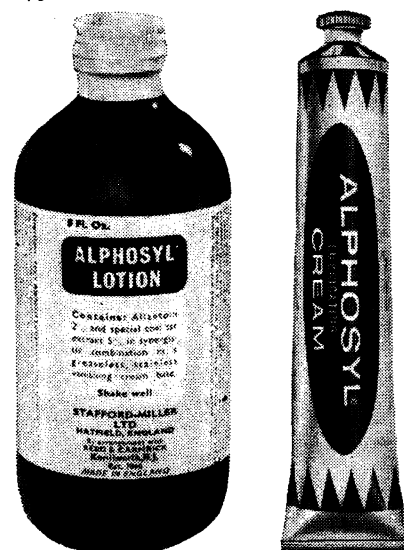

| No. of patients | 100% cleared | 75%–99% improved | 50%–74% improved | 25%–49% improved | No improvement |
|-----------------|--------------|------------------|------------------|------------------|----------------|
| 62 <sup>3</sup> | 29           | 26               | 7                | 0                | 0              |
| 50 <sup>4</sup> | 11           | 16               | 17               | 6                | 0              |
| 41 <sup>1</sup> | 27           | 9                | 5                | 0                | 0              |
| 96 <sup>2</sup> | 44           | 29               | 15               | 0                | 8              |

**Why Alphosyl is so effective** In Alphosyl, allantoin and a specially refined coal-tar extract were combined for the first time. Allantoin has been found to be particularly effective in loosening psoriatic scales<sup>5</sup>, while the keratoplastic effect of coal-tar is well known<sup>5</sup>. Alphosyl is non-greasy and non-staining and vanishes on application. It is notably safe,<sup>5,4</sup> being free from the risks which are found in other forms of treatment such as arsenicals, mercury, corticosteroids, x-ray, etc. It certainly deserves a trial in all cases of psoriasis.

Stafford-Miller Limited, Hatfield, Herts. by arrangement with Reed & Carnrick, Kenilworth, New Jersey, USA.

**Alphosyl Lotion** formula—special coal-tar extract 5% + allantoin 2% in a smooth, non-greasy lotion base.

'Tremonil' represents a considerable advance in the control of tremor. This new drug greatly reduces, and in some cases abolishes, Parkinsonian and Senile tremor. At the same time, 'Tremonil' also decreases rigidity and diminishes the psychic and autonomic disturbances which often accompany Parkinsonism. 'Tremonil' is generally well tolerated, and may when necessary be given concurrently with other drugs which are mainly effective against rigidity.

### ***What has Equanil to do with a cabbage?***

The answer is nothing. And neither has your patient if you prescribe Equanil\*. The plain fact is, however, that when potent depressant drugs are prescribed for patients with relatively mild anxiety and tension, there is a tendency for them to be over-sedated and become mere 'cabbages'. The drug of choice in chronic anxiety and tension is Equanil, which relaxes mind and muscle without interfering with the patient's day to day activities. Well-tolerated Equanil (Meprobamate B.P.) is available as 200 mg. and 400 mg. tablets in bottles of 20 and 250.  John Wyeth & Brother Limited, Taplow, Maidenhead, Berkshire. \*trade mark

## ANTIBIOTICS AND THE INTESTINAL FLORA

Treatment with broad spectrum antibiotics suppresses the normal flora, which may be replaced by abnormal resistant organisms causing diarrhoea.

This change can be prevented or reversed by the implantation of *Lactobacillus acidophilus* which has been rendered antibiotic-resistant, and is thus able to multiply freely under these abnormal conditions. This organism itself forms an antibiotic which may contribute to its rapid preponderance over other species.<sup>1, 2</sup>

Oral treatment with antibiotic-resistant *L. acidophilus* in the form of ENPAC has been shown to eliminate *Candida* from the faeces of infants with antibiotic-induced diarrhoea, with relief of symptoms succeeded by rapid gain in weight<sup>3, 4</sup> and greatly to reduce the numbers of staphylococci in the faeces of patients treated with tetracyclines.<sup>5</sup>

# Is this your pre-registration year?

**BEFORE YOU COMMIT YOURSELF TO A PRACTICE  
WORK 3 OR 5 YEARS IN THE R.A.F.**

When is the right time for you to make the big, once-and-for-always decisions about the way it's best for you to work and live your life? Straight away, now, at once? Or when you have had the chance to do a little out-of-hospital doctoring 'on your own', seen some common ailments and got a bit of capital together? Many people feel that it is only prudent not to be in too much of a hurry. If you are one of them, here is a thought for you:

*You don't, now, have to choose either an R.A.F. career or a civilian one. You can have both. And there are good reasons why you should—not only for your own sake and your family's, but in the interests of the profession and the public generally.*

## Interesting, out-of-the-rut medicine

Your first job in the R.A.F. (which you'll get three months after you join) will probably be Junior M.O. at a Station—rather like being an "Assistant with a view". In a typical case, you'd be one of two doctors, with, between you, 1500 to 2500 people to take care of. These would be the officers and men serving with you on the Station, and their families, plus any civilians who might be working there.

*You'd have a much shorter list than you would as a civilian G.P., and to this extent you would live a less strenuous life. To compensate, you would give much more comprehensive care. It is this—and the variety of your work—that makes practice in the R.A.F. so interesting.*

In the R.A.F., you combine several functions. You are in medical care not only of people, but of the environment they live in, and of the work they do. In proportion, you do less curative work, and more preventive work than most civilian doctors.

A lot of people hold the view that this is the way all medicine should be practised: with the closest possible intermingling of the doctor and his patients.

## You see a bit of the world

Think of two doctors, both aged 40. One went to his practice straight from his teaching hospital, and has been there ever since. The other went from hospital into the R.A.F. on a 5-year commission. He lived—and lived well—in the tropics with his family for 2½ years, and visited 7 countries on leave or duty, two European, three Asian, and two Australasian. All this, of course, was some time ago—he's been in civilian practice 10 years now; he's as well established as the other doctor. But which of the two has got more out of life, and has the richer memories to look back upon?

*In many ways, the transition from hospital into the R.A.F. seems much more 'natural' than the movement to civilian practice. The two communities have much more in common: both are young, cheerful, energetic, rather self-contained—and at the same time very professional, with a marked sense of purpose about what they do. If you can feel, now, that you are going to miss Medical School when you leave it, think about going into the R.A.F.: Service life would probably be 'right' for you.*

## 'Retire' with up to £3,000, tax-free

Next year, if you were in the R.A.F. as a married officer, your pay and allowances could be over £2,000. You would get regular 'rises' and regular promotion. In hard cash terms you would be literally *hundreds of pounds* better off than your civilian opposite-numbers. Besides which, your cost-of-living would be lower: if you were single, living in the Mess, you would get the equivalent of first-class hotel accommodation for, perhaps, 2/- a day out of your pay; if you were married, and the R.A.F. provided you with a house furnished right down to the last coffee cup, and they probably would—the rent would be £192 p.a.

*Leave the Service after 3 years, and you get a gratuity of £1,500, tax-free; stay on for 5, and you get £3,000. With this, you could put down a deposit on a house and furnish it very well indeed, attic to cellar.*

Five years from now. You'd probably still be the right side of thirty. What a start to a career!

## In all your life, when will you have a chance like this again?

Today, because you are young and at the beginning of your career, you can take a short time out from the main stream of civilian practice just by deciding to do it.

Now, you are free to go. In a few years time, you probably won't be.

At this stage in life, you have none of the commitments that might make an older man hold back; things like a practice that has your name on it; obligations to a community that you have become a part of; the ownership of property . . . and suchlike hostages to fortune.

All these things will, quite properly, come along in due time.

Meanwhile, you have this chance and now is the time to find out about it. If you can't write off straight away, tear this advertisement out and put it in your pocket to remind you.

## Do not let this chance go by default

FOR NERVOUS AND MENTAL DISORDERS

President: The Earl Spencer

Medical Superintendent:

D. J. O'Connell, M.D., D.P.M.

This private hospital receives patients, both male and female, suffering from nervous and mental disorders, including alcoholism and senile illnesses. The fees range from fifteen guineas per week. Private rooms with special nurses can be provided, either in the hospital or in one of the villas in the grounds. The hospital is situated in 130 acres of pleasant grounds which provide all recreational facilities.

These include a nine-hole golf course, sports ground, tennis courts, etc. A Recreation and Occupation Centre, known as Gloucester House, has been opened recently which includes an occupational therapy department, a swimming pool, a squash court, and a library with an adjoining reading room.

**WANTAGE HOUSE**

This is a separate reception unit to which patients may be admitted. It is equipped for the complete investigation of nervous and mental disorders by the most modern methods. All forms of treatment are available. It contains laboratories for biochemical, bacteriological and pathological research.

**MOULTON PARK**

Some two miles from the main hospital is the farm of approximately 600 acres. Occupational therapy is a feature of this branch and patients are given every facility for occupying themselves in farming, gardening, fruit growing, etc.

For terms and further particulars apply to the Medical Superintendent (Telephone No.: 34354 Northampton), who can be seen in London by appointment.
