Dieting for arterial disease. The case for corn oil:

There are grounds for believing that solid animal fat in the diet contributes to high serum cholesterol levels and so the danger of arterial disease and coronary heart disease.

From this suspicion corn oil is entirely free. Indeed studies both in this country and in the U.S.A. indicate that the use of corn oil combined with a low animal fat diet actually reduces high serum cholesterol levels.

An article in the *British Medical Journal** said: 'It is concluded that corn oil, together with a diet low in animal fat, is feasible as a long-term measure for the lowering of serum cholesterol, being safe, acceptable to the great majority of patients, and having virtually no clinical contra-indications'.

The oil used in the study, corn oil, linoleic acid content 56%—was added to diets of 1,630 and 2,080 calories, and comprised 41.5% of the total fat in the former, 40% in the latter. The quantity of oil added to each diet was 57 grams, just four tablespoonfuls of corn oil a day.

Mazola Pure Corn Oil which any patient can obtain from almost any chemist or grocer has a fatty-acid composition (56.2% linoleic) identical to that of the oil used in this experiment. Many patients are already familiar with it and use it in preference to any other cooking medium.

The problem of the dirty mouth

Even in 1965 the dangers, and the unpleasantness, of the dirty mouth are still present in the post-operative period, as well as in many fevers; the geriatric patient being especially prone to them. Careful attention to oral hygiene will usually, of course, keep the patient comfortable and prevent complications. Such attention, however, is very time-consuming to the nurse; and it is not often realised that for most patients it can be replaced or supplemented by the use of chewing gum.

The regular use of chewing gum, by stimulating salivary flow, keeps the mouth clean in the most natural way possible. The patient is in a sense providing his own nursing care with the minimum of energy expenditure by himself.

Child patients, of course, need no encouragement to chew gum. The older patient may need encouraging—but not once he has appreciated the very obvious cleansing and refreshing effect that chewing gum has upon the mouth. Chewing gum is also of value to patients who are forbidden to smoke.

ERYTHROCIN POWER|SAFETY|COVERAGE

for 8 out of 10 bacterial infections

ERYTHROCIN (erythromycin, Abbott) is the logical first-line treatment for most bacterial infections encountered in practice. It provides powerful yet safe coverage against the majority of causative organisms, leaving the broad spectrum antibiotics free for the specific cases in which they alone are effective.

POWER The potency of Erythrocin against the cocci is considerably more than that of tetracyclines or chloramphenicol.

SAFETY Erythrocin combines this effectiveness with a remarkable degree of safety. It is, in fact, the least toxic and least allergenic antibiotic currently in use.

COVERAGE Erythrocin is effective in over 80% of the common bacterial infections. Its wide clinical spectrum of activity covers: Most Gram-positive organisms—especially Staphylococci, Streptococci, Pneumococci, Clostridia and Corynebacteria. Gram-negative organisms such as Neisseria and most strains of Haemophilus influenzae.

By prescribing Erythrocin preparations by name you ensure that your patients receive erythromycin in safe, well-absorbed forms that produce effective blood levels rapidly.

total therapy in all iron-deficiency anaemias

Why total

Because Imferon not only raises the haemoglobin level—at the same time it supplies the iron essential for the myoglobin, tissue enzymes, and the mobilizable iron reserves in liver, spleen and bone marrow.

Why Imferon

Because it gives a rapid, predictable haematological response; there is negligible loss by excretion; side-effects are minimal; gastric intolerance is avoided; it assures administration of total iron requirements.

THE ROYAL ARMY MEDICAL CORPS OFFERS OUTSTANDING OPPORTUNITIES FOR GENERAL PRACTICE

with every facility for a varied professional career: good equipment,
good pay, good allowances, trained staff and generous leave

You may not know that the Army nowadays provides more women and children than soldiers as patients for its General Practitioners. But not only are the opportunities wide and varied: the conditions of service are such that they permit a professional man to work in a professional way. The R.A.M.C. provides modern surgeries with first-class equipment; trained staff to help; a car and driver. All general practitioners are given postgraduate training and have access to military hospitals.

Pay for a married Captain (the rank on entry) is over £2,000 with increases every two years and on promotion. Children's Educational Allowances are paid. A five year Short Service Commission earns a tax-free gratuity of £3,000, and there is excellent retired pay with Terminal Grant for those who go on to a career in the Corps. Six weeks' annual leave is normally granted, and reliefs are provided. Married general practitioners get a furnished house at low rental.

Triominic

Oral Nasal Decongestant **WANDER**

'Triominic' timed-release tablets and orange-flavoured syrup contain antihistamines and a decongestant in balanced proportions to ensure relief from nasal congestion for between 6 and 8 hours. The active constituents of 'Triominic'—the original *oral* decongestant—reach the nasal mucosa systemically. This obviates the rebound congestion which may follow the topical use of decongestants.

chinoform adds to the Betnovate range

Two new preparations now join the wide scope Betnovate range—Betnovate-C Ointment and Betnovate-C Cream. Both contain 3% chinoform (iodochlorhydroxyquinoline) in addition to 0.1% betamethasone as 17-valerate.

Betnovate (betamethasone 17-valerate) has already proved dramatically successful in the treatment of all steroid-responsive dermatoses.

The addition of neomycin—to give **Betnovate-N** preparations—widened its scope to include conditions where bacterial infection is present or suspected.

Now the addition of chinoform, which has antifungal as well as antibacterial properties, widens its scope still further.

Betnovate-C complements **Betnovate-N**. It provides for cases where fungal infection is present and answers the occasional need for a preparation containing a chemical anti-infective agent rather than an antibiotic.

Remember the suffixes: N for neomycin, C for chinoform. Add them to **Betnovate**—for even wider scope in the treatment of all steroid-responsive dermatoses.

PENBRITIN

brings relief with hope to
the Chronic Bronchitic

... whatever the severity of the condition

One Penbritin capsule four times a day for a week or more brings an excellent response in the majority of patients, reducing the volume of sputum and the severity of exacerbations.

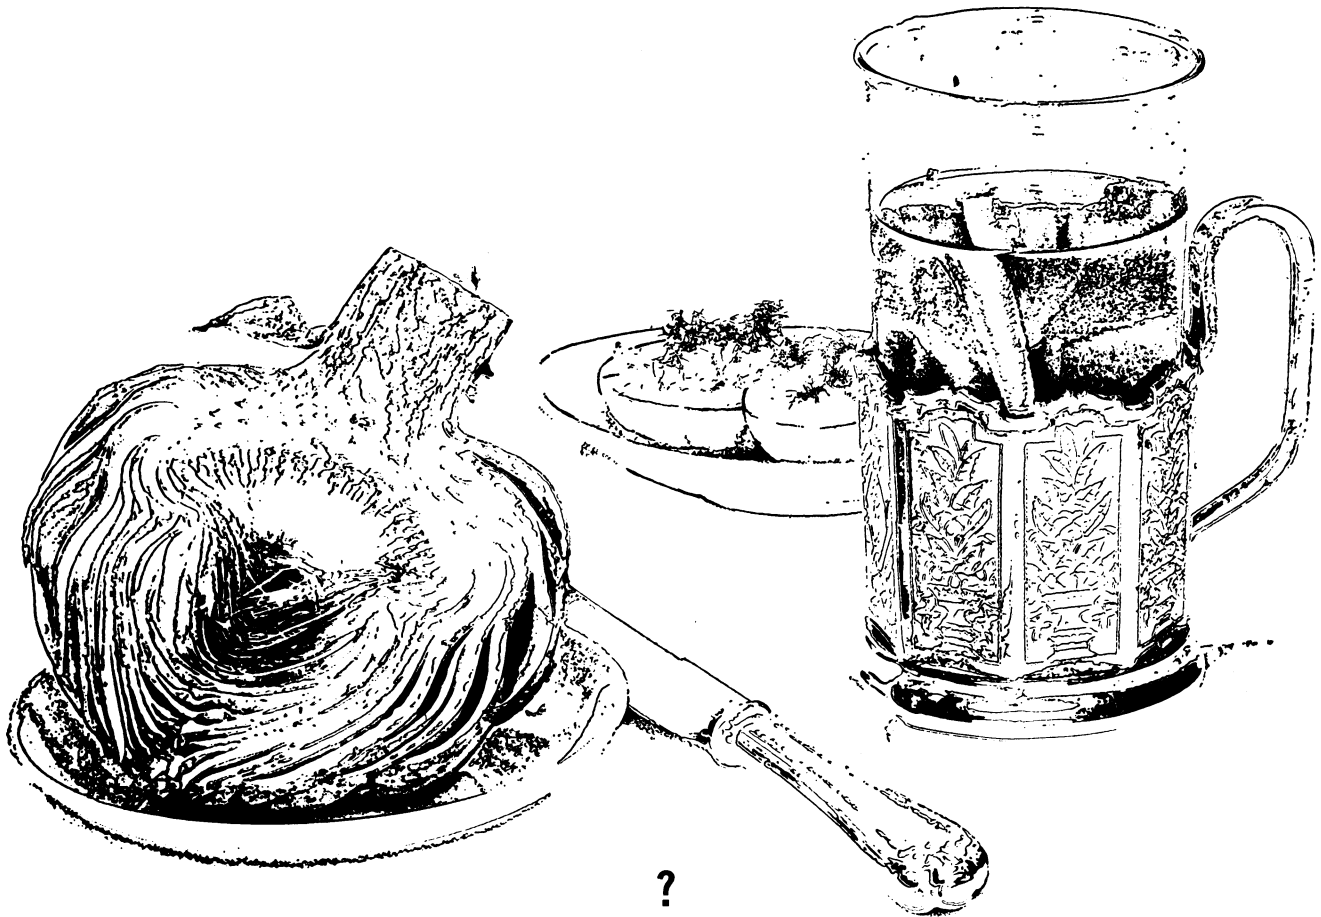

When other antibiotics fail, four Penbritin capsules four times a day for a week or more usually provide effective treatment for advanced bronchitic patients, including those with extensive bronchiectasis. Used in this way, Penbritin is also successful in clearing the sputum of those winter-long purulent cases which would otherwise require continuous antibiotic cover. Early relapse is uncommon and many patients remain free from further infection for as long as two to three months after treatment.

RASTINON

**IS THE FIRST CHOICE IN INITIATING
ORAL ANTIDIABETIC THERAPY**

For the maturity-onset diabetic whose blood sugar levels are inadequately controlled by diet, Rastinon provides control at normoglycaemic levels.

Given in divided doses after meals, Rastinon is rapidly absorbed and this ensures the maximum effect when the need is greatest. As hypoglycaemia is an exception with Rastinon, nocturnal hypoglycaemia will not present a hazard even with high doses.

Since side effects are few and minor the unsurpassed ratio of safety to effectiveness makes Rastinon the first choice for initiating oral antidiabetic therapy. Rastinon tablets each contain 0.5 g. tolbutamide B.P.

Now Riker announce another first—the 400-dose *Medihaler*. More compact, yet giving one third more treatment from each unit new *Medihaler* is the result of continuous development and of successful use by doctors the world over. **With it the cost per dose is reduced 15 per cent, to less than ½d.**

Although each unit lasts so much longer, hygiene is improved because with each prescription the patient receives a complete unit. The empty unit, including adapter is thrown away. In addition, the dustcap completely encloses the mouthpiece.

In bronchospasm, *Medihaler* continues to provide an immediacy and degree of relief unsurpassed by any other method—including injection. Now it is even easier and more convenient for the patient to use.

This International Journal will be devoted to the rapidly growing field of social psychiatry. At this time the literature on inter-personal processes and on the sociological and cross cultural aspects of human behaviour and their role in psychiatric illness is widely scattered in many publications throughout the world. A group of representative psychiatrists working in the field of social psychiatry have therefore agreed to found an international journal to be called Social Psychiatry.

This journal will be published quarterly in English, French, and German and covers research, developments, and clinical investigations in social psychiatry throughout the world. Work from all social and behavioural sciences, whether multidisciplinary or not, as well as scholarly critiques, will be presented. Reports on cross cultural studies, surveys of community mental health, and epidemiological research will be published. Furthermore, the periodical will provide international dissemination and exchange of information on all problems, theories, methodologies, institutional practices, administration, legislation, and social planning pertaining to the implementation of modern socially oriented psychiatric treatment.

Social Psychiatry will also aim to contribute to the elucidation of psychiatric disorders on all levels, intrapsychic, interpersonal, and sociocultural, through appropriate selection of material, and thereby promote further improvement in the care of the mentally ill, and the establishment of world-wide standards for the theory and practice of social psychiatry.

Ceporin

injection of
cephaloridine

antibiotic of choice
for urinary tract infections

Ceporin is the antibiotic of choice in the treatment of urinary tract infections caused by most strains of both gram-positive and gram-negative organisms. It is almost entirely excreted by the kidneys and appears in the urine in high concentrations. In acute conditions the urine can be rendered sterile quickly and symptoms often subside rapidly. Ceporin is also valuable as cover before and after urinary tract surgery.

Other conditions Ceporin is the primary choice antibiotic for mixed infections and for organisms likely to be resistant to penicillin. Since there is no cross-sensitisation with penicillin or its derivatives, it is also indicated for patients allergic to penicillin. Other conditions include respiratory tract infections (excluding tuberculosis), meningitis, septicaemia, bacterial endocarditis and

soft tissue infections.

Ceporin injections are remarkably painless and make the whole dose of the antibiotic available to the body.

Many acute infections will clear rapidly within 2 to 5 days. More chronic infections require longer treatment.

Presentation Vials: 1 and 5 x 250 or 500 mg

MOGADON* AND NATURAL SLEEP

Striking advances have recently been made into the knowledge of sleep with the aid of the electroencephalogram, and it is now recognised that sleep does not consist of a quantitative reduction in cortical activity but of a qualitative change. Hypnotics, by their generalised depressant action on all the brain structures, greatly reduce cortical activity and sleep takes on an abnormal pattern. The development of Mogadon, however, has now made the treatment of insomnia possible without any significant lessening of cortical activity. The sleep induced closely resembles natural sleep; there is no disturbance of the normal rhythmical balance that exists between the sleep and wake processes and the patient will awake refreshed, without hangover and without mental confusion.

'In addition, and most important, *he felt well*. He did not feel like the weak, washed-out patient that I have come to expect after intensive diuretic therapy.'

The Use of Aldosterone Antagonists in Cardiological Practice.
Paper presented before the Cardiac Society of Australia
and New Zealand, October 1960.

Conventional diuretics act on the proximal renal tubule. They allow reabsorption of sodium and water and loss of potassium to continue at the distal tubule. But Aldactone-A (brand of spironolactone), added to the regimen, acts at the distal tubule, and prevents excessive sodium reabsorption and potassium loss.

Aldactone-A thus...

- ☐ Enhances sodium excretion
- ☐ Conserves potassium
- ☐ Overcomes diuretic resistance

Nulacin and only Nulacin provides intragastric milk-alkali drip therapy for the ambulant patient

“In view of the ineffectiveness of most of the tableted antacids, the milk-alkali tablet (Nulacin) would appear to be the antacid of choice for ambulatory therapy.”

Safe, Simple, Effective

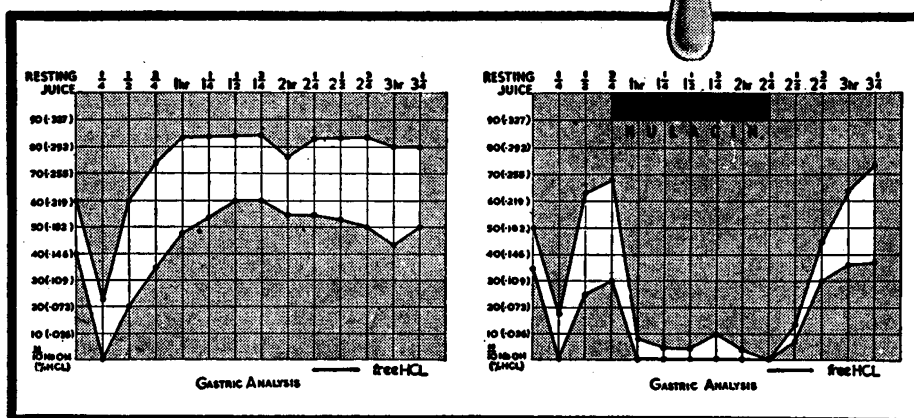

NULACIN TABLETS provide a safe, simple and effective treatment of peptic ulcer.

In treating peptic ulcer a Ryle's tube may be passed through the nose and into the oesophagus and a mixture of milk and antacid allowed to flow continuously over the affected area. This form of therapy can only be employed in those patients who are in bed and for the ambulant patient Nulacin tablets are preferable.¹ Nulacin tablets are prepared from whole milk combined with dextrans and maltose, together with the trisilicate, oxide and carbonate of magnesium and calcium carbonate. Nulacin tablets when allowed to dissolve slowly in the mouth provide milk-alkali drip therapy. In fact, Nulacin tablets have revolutionized the treatment of peptic ulcer.⁸

In Neonatal Infections, the answer is **AMPICLOX** regd.

This new product has been made available in response to three independent recommendations^{1,2,3} that an ampicillin/cloxacillin formulation would fill a conspicuous gap in neonatal therapy. Ampiclox fulfils this need, providing a broad spectrum antibiotic which includes the hospital staphylococcus within its range of activity, yet is free from the serious or potentially serious side-effects associated with current forms of therapy.

Ampiclox is indicated for the prophylaxis or treatment of infection in premature babies or neonates.^{1,2,3} Particularly:

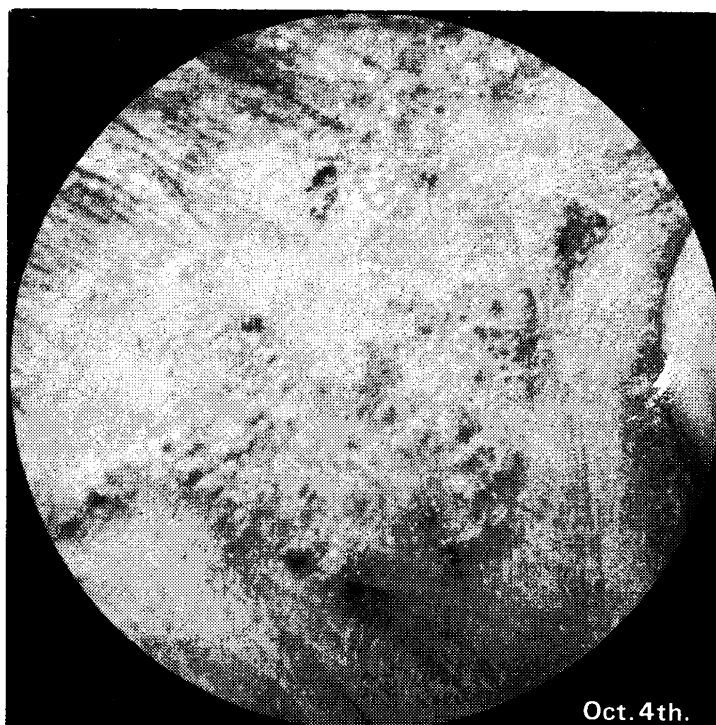

- ☐ Suspected or confirmed infection in premature babies and neonates.
- ☐ Babies born of mothers with infected liquor.
- ☐ Babies born of mothers whose membranes ruptured more than 48 hours before delivery.
- ☐ Babies born with respiratory distress necessitating endotracheal intubation, mouth to mouth breathing or other resuscitation methods, when subsequent infection is a possible hazard.
- ☐ Babies following a difficult delivery, when inhalation of much liquor, mucus or meconium may have occurred.
- ☐ Babies requiring certain surgical procedures carrying risk of infection, such as replacement transfusion.

Ampiclox is available as Injection for intramuscular use or Neonatal Drops specially formulated for addition to the feeds of premature infants and neonates.

Psoriasis... rapid response to Alphosyl

... even in previously intractable cases. A patient of 48 who had a generalised psoriasis for 20 years was essentially clear in six weeks.² A girl of 10 with a strong familial history of psoriasis, cleared almost completely after three weeks' application of Alphosyl Cream.² These are just two typical cases from the extensive clinical records underlining Alphosyl's outstanding effectiveness in bringing psoriasis under control.

New Alphosyl lubricating cream. A new water-in-oil dosage form, Alphosyl Lubricating Cream is particularly significant in the treatment of the dry, extremely scaly psoriatic lesion confined to the small site and the intertriginous area. Alphosyl cream is especially helpful in clearing psoriatic plaques exposed to constant friction. By enhancing lubrication of the skin folds, it serves to lessen irritation and facilitate healing. Clearing is prompt, even in previously resistant cases. The effectiveness of Alphosyl in this form is attributable in large measure to its unique cream base. This consists of a combination of saturated and unsaturated free fatty acids, naturally occurring triglycerides and esters that resemble the lipid constituents of normal healthy skin. The vehicle also contains hydrophylic-lipophilic bipolar substances which

Oct. 9th.

enhance the moisture uptake and retention of the amphoteric proteins of the stratum corneum. Significantly, it has been shown that squalane, one of the components of the base, is most effective in dissolving a cement substance in psoriatic scales.

Formula: Allantoin 2% + 90% alcoholic extract of coal-tar (5=1) 5% in a vanishing type cream base or a smooth, non-greasy lotion base.

How to bring more freedom into your life as a doctor.

Become a Naval Officer!

One of the best things about being a Medical Officer in the Royal Navy is the freedom it gives you. You can have the responsibility, and the complete clinical control, to practise a wide field of subjects—both the traditional ones and the new sciences, like nuclear, underwater and aviation medicine. You can also study for higher degrees, specialise and even aim for consultant status—all with the full support of the Royal Navy.

What about your pay and prospects? These are good. Your *starting* salary would be considerably higher than that of a civilian hospital registrar (with

marriage and other allowances to add considerably to your income). Moreover, you can add in the varied, active, outdoor life of a naval officer—with its comradeship, world travel and very special status. You enter initially for a Short Service Commission—with the opportunity of a Permanent Commission after 1 year.

3 Ways of Entry

- 1 As a fully registered doctor; any civilian experience counts towards your seniority.
- 2 During your pre-registration year.

- 3 As a student any time after passing 2nd M.B. For fully registered women doctors there is a special Short Service Commission.

If you would like more information, write to the address below, giving details of your age and qualifications. A personal interview can be arranged if desired.

The hospital is a general teaching hospital with 666 beds and full investigational facilities, and is associated with the University of Melbourne.

Duties of appointee will include:

1. Responsibility to the Medical Superintendent for the administration and operation of the Radio-Isotopes Unit of the hospital, including evaluation, initiation and elaboration of new techniques approved by the Radio-Isotopes Committee.
2. Consultation with members of the Medical Staff concerning patients referred by them and investigation of these patients.

At present the Radio-Isotopes Unit has the part-time assistance of a Physicist but applications are being sought for a full-time Physicist who will assist the Medical Officer in the more technical aspects of the work.

Conditions of appointment and salary within the range £3,600 to £4,510 per annum Australian currency, for a Specialist with an appropriate higher qualification, at least five years' experience in the specialty and at least ten years since medical qualification, in accordance with the Medical Salaries Committee (Jillon) Report. Should not suitable applicant satisfy the above provisions, consideration may be given to making an appointment within a lower salary range.

Duties to commence on January 31, 1966, or at a time to be mutually arranged. Applications on the prescribed form, obtainable from the undersigned, close on December 3, 1965.

Further details obtainable from the Medical Superintendent.

Names of at least two referees must be submitted and not more than four testimonials may accompany the application.—L. B. Swindon, Manager. (H.3264)

FERRAPLEX B
is the balanced haematinic

Ferraplex B combines, in one tablet, a therapeutic quantity of easily assimilable ferrous iron with other haemopoietic factors needed for maximum absorption and utilisation; it rapidly increases and maintains adequate haemoglobin levels with a minimum of gastric disturbance.

Composition: ferrous sulphate (167mg.), copper carbonate (0.3mg.), ascorbic acid (vitamin C—8mg.), aneurine hydrochloride (vitamin B₁—0.5mg.), riboflavine (vitamin B₂—1mg.), nicotinamide (5mg.), and other naturally occurring constituents of vitamin B complex.

Dosage: 1-2 three times daily during or after meals.
