---

## *Brand Name*

DIAMOX† acetazolamide Sustets† sustained release capsules.

## *Active Ingredients*

Each DIAMOX acetazolamide Sustets capsule contains 500 mg. Acetazolamide in sustained release form.

## *Indications*

Indicated both for short term (1 to 6 weeks) and for long term treatment of chronic simple (open angle) glaucoma and secondary glaucoma.

## *Side-effects*

Side-effects are minimal. Those effects which have been noted include paraesthesia, particularly a tingling feeling in the extremities, some loss of appetite and minor gastrointestinal upsets. Occasional instances of drowsiness and confusion have been reported. The appearance of urinary frequency usually only after the first few doses may be ascribed to the diuretic effect of the drug. Many of these side-effects disappear after a few days of treatment. During long term therapy an acidotic state may occasionally supervene. This can be corrected by the administration of bicarbonate. In rare cases the development of renal calculi has been reported, necessitating cessation of treatment.

## *Contraindication*

DIAMOX acetazolamide Sustets therapy is contraindicated in situations in which sodium and/or potassium blood serum levels are depressed in cases of renal pathology, suprarenal gland failure, hyperchloraemic acidosis and in some cases of hepatic acidosis.

## *Dosage*

The recommended dose is 1 capsule (500 mg.) twice a day. Usually one capsule is administered in the morning and one capsule in the evening.

## *Presentation*

Bottles of 30 and 100 DIAMOX acetazolamide Sustets.

## *Distalgesic erases pain*

- Distalgesic relieves pain of all degrees, from toothache to malignancy. Two tablets three or four times a day give prompt and lasting relief, without the development of tolerance or physical dependence. Distalgesic contains no opiate to cause constipation or addiction, and no salicylate to irritate the gastric mucosa. Its active principles are *dextropropoxyphene*, found in clinical trials to be as potent an analgesic as oral pethidine; and *paracetamol* to widen the range of analgesia and add a valuable antipyretic action.

Distalgesic tablets [No.1014] each contain 32.5 mg. dextropropoxyphene and 325 mg. paracetamol.

# FOR THE WOMAN WHO IS NOT A B.Sc.

# A GREATER DEGREE OF SIMPLICITY IN ORAL CONTRACEPTION

There is virtually only one form of failure in oral contraception: patient failure. The patient, in spite of her checking systems with diaries and calendars, may miss a tablet or miscount the days of the interval. Such errors—when they occur—involve the doctor in unnecessary consultation and explanation. This led us to the development of Gynovlar 21, the first oral contraceptive with 21 tablets instead of the usual 20.

It is the 21st tablet which allows this surprisingly simple dosage scheme: ☐ **3 weeks' treatment** ☐ **1 week's interval** and so on without variation. The start of each new course is not subject to individual interpretation of the menstrual pattern and thus the risk of miscalculation by the patient is virtually excluded.

**THE SIMPLEST VISUAL CHECK:** Only the 21st tablet makes the Memo-Pack possible. This is a unique visual dispenser, in which each tablet is marked with the day on which it should be taken. The patient can therefore check at a glance whether she has followed the dosage correctly. The Memo-Pack reveals instantly without recording or pre-setting, whether the day's tablet has been taken. As long as a woman knows what day of the week it is she just can't go wrong.

## Today's Drugs—"New Oral Contraceptives"

"It is interesting to note that Gynovlar is the only product on C.I.F.C. trial in which patients have not completely missed any tablets. Presumably because of the more regular routine of tablet-taking, patients find it simpler to follow and are less liable to miss them.

The cycle length with this 21/7 regimen [3 weeks' treatment, 1 week's interval] of course is always 28 days".

*British Medical Journal, 8 August, 1964, p. 357.*

## Gynovlar 21 First with the 21st

### INDICATIONS

Contraception, Dysmenorrhoea, Endometriosis, Functional sterility, Normalisation of irregular cycles.

### DOSAGE

1 tablet daily for 21 days, followed by a tablet free interval of 7 days. Each new course of tablets is started on exactly the same day of the week as the previous course.

*N.B. The first course should start on the fifth day of the cycle.*

### PRESENTATION

For the maturity-onset diabetic whose blood sugar levels are inadequately controlled by diet, Rastinon provides control at normoglycaemic levels.

Given in divided doses after meals, Rastinon is rapidly absorbed and this ensures the maximum effect when the need is greatest. As hypoglycaemia is an exception with Rastinon, nocturnal hypoglycaemia will not present a hazard even with high doses.

Since side effects are few and minor the unsurpassed ratio of safety to effectiveness makes Rastinon the first choice for initiating oral antidiabetic therapy. Rastinon tablets each contain 0.5 g. tolbutamide B.P.

# Glaxo's unique two-tier tablet for diuretic and anti-hypertensive treatment

---

## **Prompt anti-hypertensive/diuretic effect**

## **Delayed, sustained potassium release and absorption**

Glaxo's new two-tier tablet helps to counter the problem of potassium depletion during prolonged treatment. It is designed for gradual, sustained potassium release and absorption and to minimise gastric irritation.

---

This unique tablet design has been applied to two new products :

## **Neo-NaClex-K**

Bendrofluazide 2.5 mg, potassium chloride 630 mg—pink and white. In bottles of 25, 100 and 500.

## **Serplex**

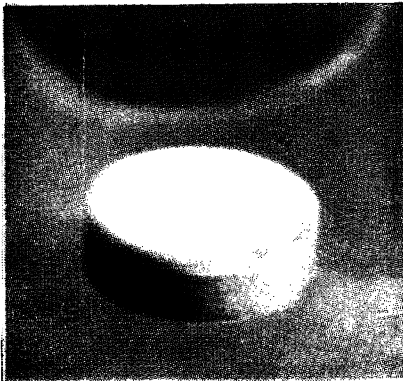

Reserpine 0.125 mg, bendrofluazide 2.5 mg, potassium chloride 630 mg—blue and white. In bottles of 25, 100 and 500.

---

Neo-NaClex-K and Serplex are Glaxo trade marks

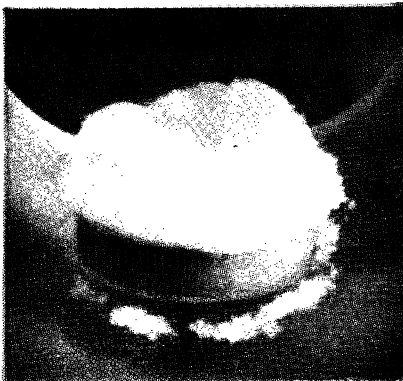

Detailed literature is available from Glaxo Laboratories Limited

### **How Neo-NaClex-K and Serplex tablets work**

The film-coated tablets are tasteless and easily swallowed.

---

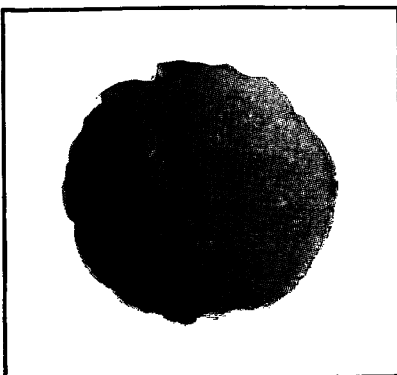

Very shortly after the tablet is swallowed, the white tier disintegrates and the diuretic/anti-hypertensive dose is available for absorption.

---

The coloured tier, containing potassium chloride crystals, is designed to give a gradual release of the potassium to minimise gastric irritation. Reliable absorption of this material from the intestine has been demonstrated.

---

This tier dissolves slowly, exposing and releasing the crystals of potassium chloride very slowly so that no great concentration is reached at one time. The final photograph shows (after magnification) what remains of the coloured matrix after the potassium chloride has leached out steadily and completely for absorption.

## **extends the reach of diuretic therapy**

- 'Edecrin' is chemically and pharmacologically distinct from all other diuretics in current use.
- 'Edecrin' has a wider range of effectiveness than the thiazides and related diuretics.
- 'Edecrin' may be used in oedema of all grades of severity, whether acute or chronic.
- 'Edecrin' has proved effective in many cases resistant to all other diuretics.
- 'Edecrin' has an extremely rapid onset of action—faster than the parenteral mercurials.
- 'Edecrin' produces a more favourable ratio of sodium to potassium excretion than the thiazides.

# Every Winter PENBRITIN brings you back to the Christmas season

## ... whatever the severity of the condition

One Penbritin capsule four times a day for a week or more brings an excellent response in the majority of patients, reducing the volume of sputum and the severity of exacerbations.

When other antibiotics fail, four Penbritin capsules four times a day for a week or more usually provide effective treatment for advanced bronchitic patients, including those with extensive bronchiectasis. Used in this way, Penbritin is also successful in clearing the sputum of those winter-long purulent cases which would otherwise require continuous antibiotic cover. Early relapse is uncommon and many patients remain free from further infection for as long as two to three months after treatment.

# Nulacin and only Nulacin provides intragastric milk-alkali drip therapy for the ambulant patient

“In view of the ineffectiveness of most of the tableted antacids, the milk-alkali tablet (Nulacin) would appear to be the antacid of choice for ambulatory therapy.”

Med. Times, N.Y., 1958, 1, 74

## Safe, Simple, Effective

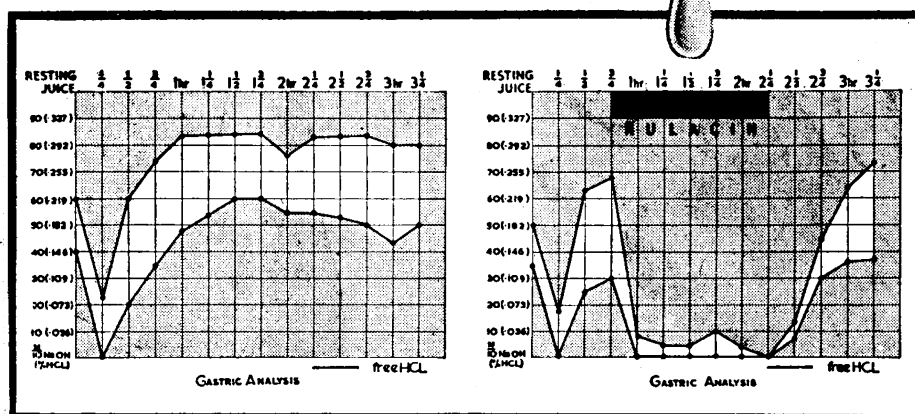

NULACIN TABLETS provide a safe, simple and effective treatment of peptic ulcer.

In treating peptic ulcer a Ryle's tube may be passed through the nose and into the oesophagus and a mixture of milk and antacid allowed to flow continuously over the affected area. This form of therapy can only be employed in those patients who are in bed and for the ambulant patient Nulacin tablets are preferable.<sup>1</sup> Nulacin tablets are prepared from whole milk combined with dextrins and maltose, together with the trisilicate, oxide and carbonate of magnesium and calcium carbonate. Nulacin tablets when allowed to dissolve slowly in the mouth provide milk-alkali drip therapy. In fact, Nulacin tablets have revolutionized the treatment of peptic ulcer.<sup>8</sup>

# In Neonatal Infections, the answer is **AMPICLOX** regd.

This new product has been made available in response to three independent recommendations<sup>1,2,3</sup> that an ampicillin/cloxacillin formulation would fill a conspicuous gap in neonatal therapy. Ampiclox fulfils this need, providing a broad spectrum antibiotic which includes the hospital staphylococcus within its range of activity, yet is free from the serious or potentially serious side-effects associated with current forms of therapy.

Ampiclox is indicated for the prophylaxis or treatment of infection in premature babies or neonates.<sup>1,2,3</sup> Particularly:

- ☐ Suspected or confirmed infection in premature babies and neonates.
- ☐ Babies born of mothers with infected liquor.
- ☐ Babies born of mothers whose membranes ruptured more than 48 hours before delivery.
- ☐ Babies born with respiratory distress necessitating endotracheal intubation, mouth to mouth breathing or other resuscitation methods, when subsequent infection is a possible hazard.
- ☐ Babies following a difficult delivery, when inhalation of much liquor, mucus or meconium may have occurred.
- ☐ Babies requiring certain surgical procedures carrying risk of infection, such as replacement transfusion.

Ampiclox is available as Injection for intramuscular use or Neonatal Drops specially formulated for addition to the feeds of premature infants and neonates.

# a higher degree of iron absorption

D. M. Oxon

## Ferrograd® C

**New presentation of 'Gradumet'® iron** The advantages of Ferro-Gradumet in providing ample amounts of iron in a single daily dose without gastric upset are now widely recognised by the medical profession. Ferrograd C is an extension of the 'Gradumet' presentation, consisting of ferrous sulphate in a slow-release matrix, *plus* enough vitamin C to produce improvement of absorption when this is a problem.

**Iron with enough C** Experimental and clinical investigation of the addition of vitamin C to oral iron therapy shows that there is an increase in absorption of iron providing *enough* vitamin C is given. Ferrograd C contains 500 mg of vitamin C and evidence shows that this amount is sufficient to make the addition worthwhile in terms of more effective absorption and possibly in utilization.

**Without gastric upset** Steps taken to improve absorption are of no practical value, however, unless the preparation

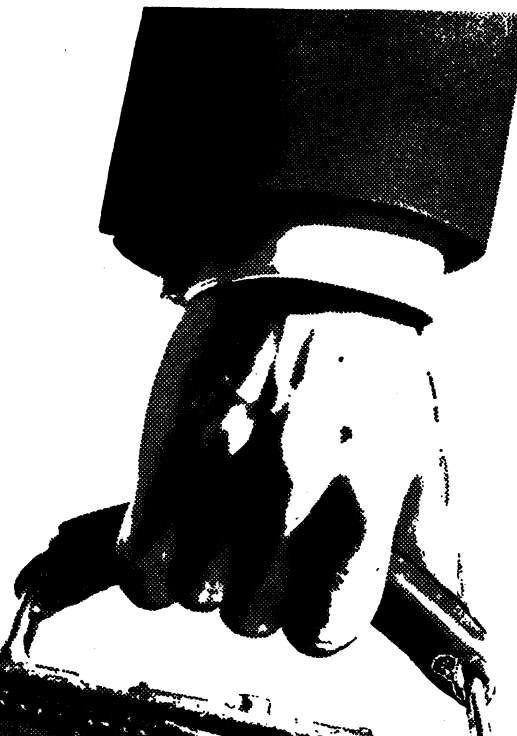

is well tolerated and taken regularly. The 'Gradumet' vehicle virtually eliminates the unpleasant side-effects experienced by many patients on ordinary iron therapy. Instead of exposing the stomach to large quantities of corrosive iron salts, the ferrous sulphate within the 'Gradumet' is slowly leached out, independent of body chemistry, as it passes through the gastro-intestinal tract. Ferrograd C combines the convenience and acceptability of this method of presentation together with an increased level of absorption. It is particularly recommended for those patients in whom absorption of iron is known to be poor, or where parenteral iron is being considered.

**PRESENTATION** Each red Filmtab® (film-coated tablet, Abbott) contains 525 mg ferrous sulphate BP (in exsiccated form), equivalent to 105 mg elemental iron and 500 mg of vitamin C as sodium ascorbate. **DOSAGE** One Ferrograd C daily before a meal.

# THE ROYAL ARMY MEDICAL CORPS OFFERS OUTSTANDING OPPORTUNITIES FOR GENERAL PRACTICE

with every facility for a varied professional career: good equipment,  
good pay, good allowances, trained staff and generous leave

You may not know that the Army nowadays provides more women and children than soldiers as patients for its General Practitioners. But not only are the opportunities wide and varied: the conditions of service are such that they permit a professional man to work in a professional way. The R.A.M.C. provides modern surgeries with first-class equipment; trained staff to help; a car and driver. All general practitioners are given postgraduate training and have access to military hospitals.

Pay for a married Captain (the rank on entry) is over £2,000 with increases every two years and on promotion. Children's Educational Allowances are paid. A five year Short Service Commission earns a tax-free gratuity of £3,000, and there is excellent retired pay with Terminal Grant for those who go on to a career in the Corps. Six weeks' annual leave is normally granted, and reliefs are provided. Married general practitioners get a furnished house at low rental.

**MORE NORMAL LIFE**

In over 15 years ACTHAR GEL has given new life to thousands of rheumatoid patients and is still unsurpassed.

**Stimulation Therapy**

ACTHAR GEL is not a steroid. It is a polypeptide which stimulates the adrenal cortex to release the full range of natural steroids, as opposed to the oral administration of a single synthetic steroid.

**Hormone Balance Preserved**

ACTHAR GEL maintains the integrity of the pituitary/adrenal axis, thereby avoiding many of the hazards of long-term corticosteroids. Normal stress response is possible and treatment can easily be withdrawn.

**Safety in Use**

The toxic effects of the more potent analgesics are avoided, and such side effects as are observed are

usually due to over-dosage. These are seldom serious, and may be reversed by adjusting the dosage.

**Simple Administration**

Several thousands of self-injections have now been given and many previously crippled patients have returned to, and remained at, their occupations.

**Reliable Potency**

The method of manufacture and the full B.P. 1963 assay on hypophysectomised rats means that ACTHAR GEL is the most reliable long-acting corticotrophin available. For fuller details please write for the book "The Place of ACTHAR GEL in the treatment of Rheumatoid Arthritis."

## **New Mycivin acts effectively against Gram-positive respiratory infections**

Mycivin is a new antibiotic, lincomycin hydrochloride, chemically unrelated to all others clinically available.

It has been proved that Mycivin acts effectively against Gram-positive infections, including those resistant to other antibiotics. Clinical cross-resistance has not been demonstrated with any of these antibiotics. Mycivin is capable of achieving high and

sustained serum levels and may be given with safety to patients allergic to penicillin and other drugs. In over 3,000 patients treated with this new antibiotic, no severe toxicity or allergic reactions have been reported.

Mycivin is available for oral and parenteral use. Capsules of 500 mg. in containers of 20 and 100. *Basic N.H.S. Prices* 53/- and

256/-. Ampoules of 600 mg. in packs of 3 x 2 ml. *Basic N.H.S. Price* 25/6.

## summer-long protection against HAY FEVER with

# D-VAC Pollens 3 dose course

Sufferers from 'classical' hay fever and pollen asthma can look forward to relief next summer after desensitisation with D-VAC Pollens. This provides fundamental treatment of pollen allergy, giving a high degree of protection in the majority of patients and halting any tendency to deterioration. Long-term relief will be obtained in most cases from a pre-seasonal course given in each of three successive years.

D-VAC Pollens, Bencard emulsified 'depot' pollen vaccine, is the latest development in desensitising vaccines. The course of three carefully graded injections—fewer than for any other available—has been shown to be at least as effective as the much longer course with aqueous vaccine. Injection from a specially designed syringe ensures the controlled release of active emulsion through surrounding 'shield' emulsion. Local or systemic reactions are therefore rare provided that the recommended technique of administration is employed under antihistamine cover.

D-VAC Pollens is prepared from extracts of 12 varieties of common grass pollens (Bencard group B2), which are responsible for over 80% of cases of 'classical' hay fever and pollen asthma. Two alternative courses are available:

**Primary Course** (D-VAC Pollens Nos. 1, 2 and 3—250, 750 and 3,500 Noon units respectively): designed for patients who have not received pollen vaccine treatment in the last five years, or who are known to be highly sensitive to grass pollens, and for children (aged 6-12 years).

**Advanced Course** (D-VAC Pollens Nos. 2, 3 and 4—750, 3,500 and 7,500 Noon units respectively): designed for patients aged over 12 who have had pollen vaccine treatment in the last five years and whose symptoms are not very severe.

(Patients known to exhibit very strongly positive skin test reactions or suffering from atopic eczema should first be referred to an allergy clinic.)

The 3 injections are administered pre-seasonally at intervals of exactly 4 weeks, the first dose being given in February or March. Full technical details (administration, precautions, possible reactions, etc.) are supplied with each dose, or on request.

## TO BE SURE

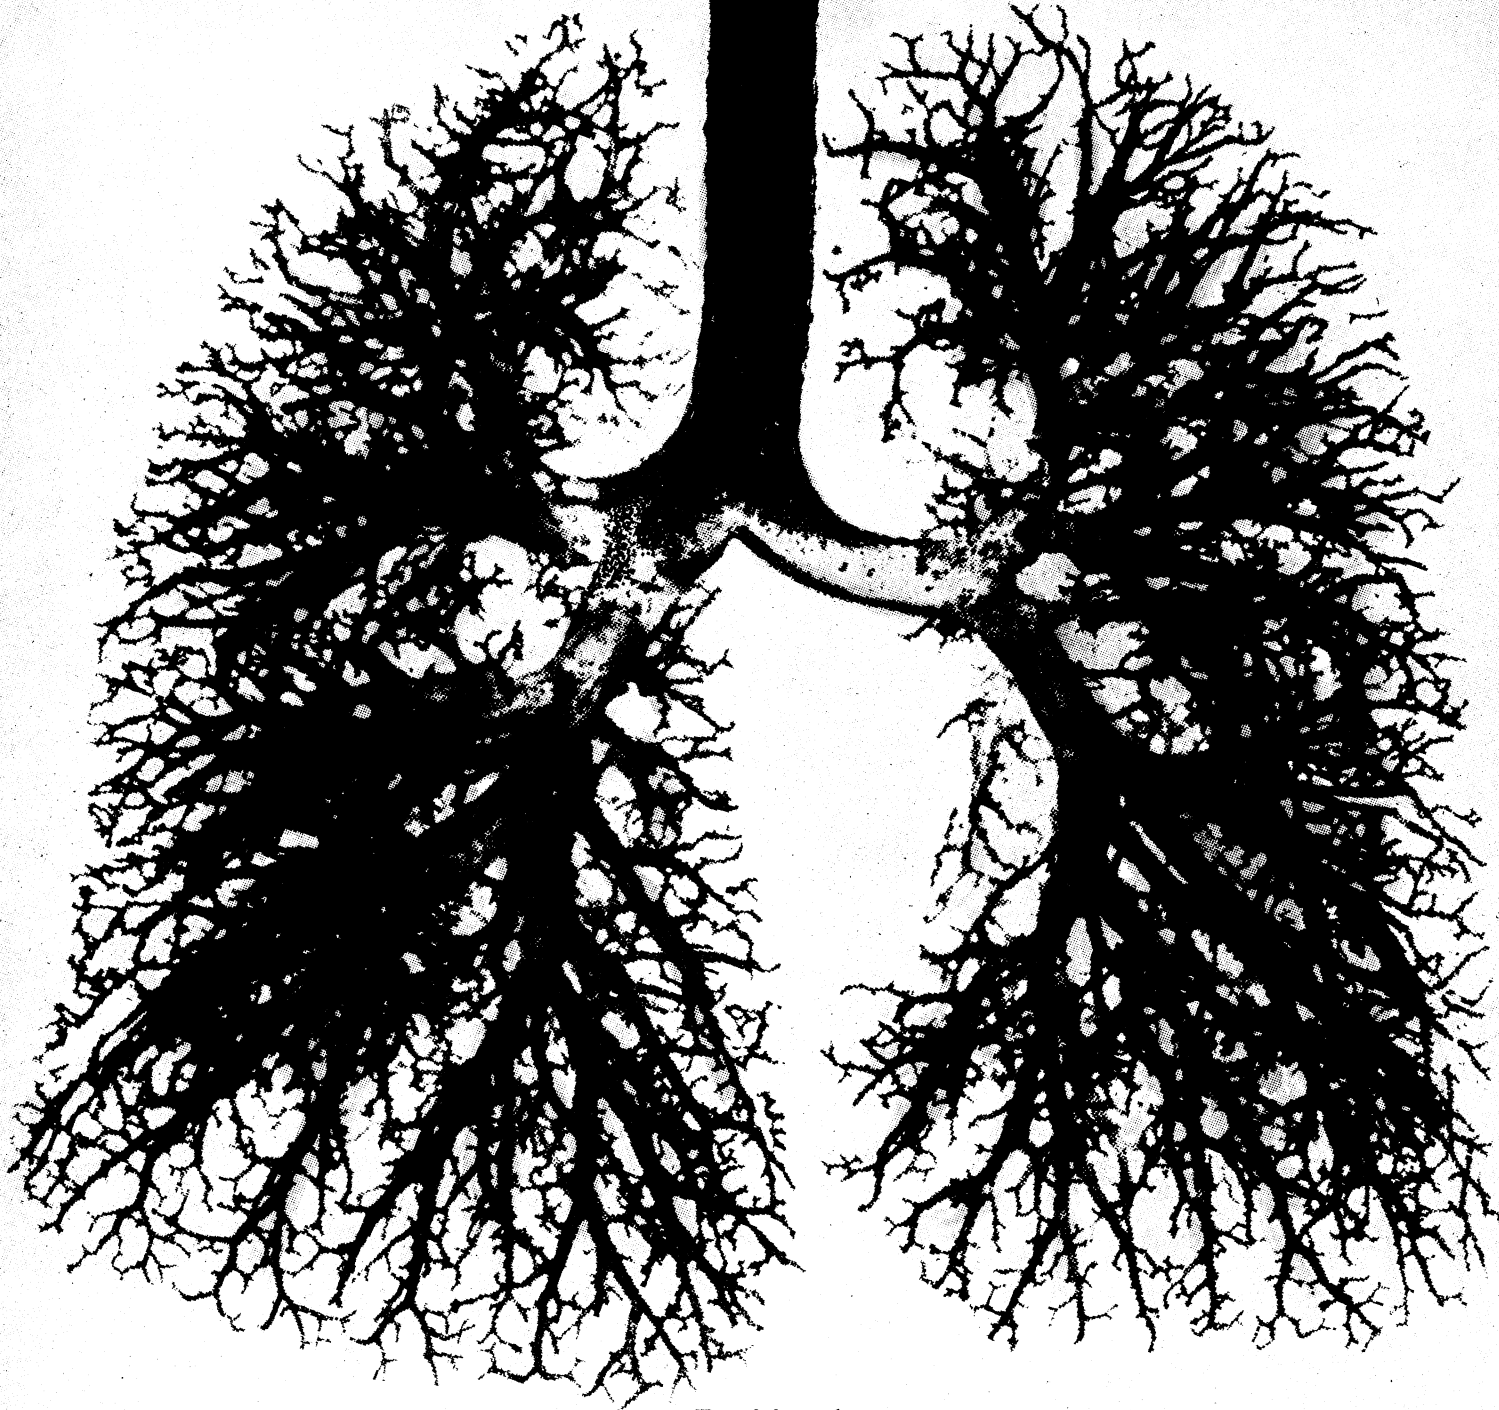

of obtaining D-VAC Pollens, it is advisable to prescribe and order before 31st December: no order can be accepted after 21st January.

Prescriptions and orders, for D-VAC Pollens 'Primary' or 'Advanced', should state the exact date (between 14th February and 12th March) on which the first dose is to be injected. The first dose will be despatched to arrive by this date. (D-VAC Pollens is not available outside the U.K.)

## STUDENT PRIZES AND TRAVELLING FELLOWSHIP IN PSYCHIATRY

The Mental Health Research Fund awards  
annually to medical students and doctors in  
their pre-registration year three Monetary  
Prizes and a Travelling Fellowship as the  
result of an essay competition on a subject  
relating to mental health, and a subsequent  
interview.

Applicants gaining the top three places in  
the essay competition will be given prizes  
of £100, £50, and £25 respectively.

The Travelling Fellowship, tenable in a  
psychiatric or other department abroad for  
up to one year, will be awarded as the result  
of an interview combined with consideration  
of the candidate's undergraduate record.  
Persons interviewed will be chosen from  
the top ten in the essay competition. The  
travelling fellowship will normally be taken  
up at the end of the pre-registration year or,  
in the event of it being awarded to a medical  
student, may be taken up after qualifi-  
cation.

The subject for the essay this year is  
"A young adult entering hospital for treat-  
ment of a mental disorder has how much  
greater chance of being returned to the  
community in a short space of time than he  
had thirty years ago. Discuss the reasons for  
this and its effect on patient and community."

The Panel of Examiners consists of two  
members of the Research Committee of the  
Mental Health Research Fund and one member  
of the Association of Teachers of  
Psychiatry in Undergraduate Medical  
Schools.

Essays should be sent, before March 1,  
1966, to the Secretary, Research Committee,  
Mental Health Research Fund, 38 Wigmore  
Street, London W.1 (Tel. WELbeck 4103),

**MEDICAL RESEARCH COUNCIL****MEDICAL OFFICER**

Applications are invited from medical graduates aged between 28 and 36 years for a post in the London headquarters office of the Medical Research Council.

The Council, who receive a parliamentary grant-in-aid of over £10,000,000 a year, promote an extensive programme of medical research, both at home and abroad, in their own establishments and at many hospitals and universities.

The work of the headquarters medical staff, which covers the whole range of the Council's activities, is important, interesting and varied. In particular, the medical officers are responsible for maintaining liaison with members of the Council's scientific staff and others active in medical research. They also take part in scientific committee and conference activities and may assist with work in the fields of parliamentary affairs, public relations and publications. The post therefore offers good scope for a medical graduate keenly interested in medical science, with leanings towards an administrative rather than a professional career. Some research experience, although not essential, would be an advantage.

The present salary scale in the age range 28 to 36 is £2,269 to £2,919 rising subsequently to £3,780 per annum, with provision for superannuation. The appointment will be to the Council's established staff, subject to satisfactory completion of a probationary period of two years.

Applicants should write (giving full details of education, qualifications, and experience, with the names and addresses of two professional referees), to the Principal Medical Officer (E2/269), Medical Research Council, 20 Park Crescent, London W.1, before December 7, 1965. (2664)

**COMMERCIAL APPOINTMENTS****DIRECTOR  
OF  
MEDICAL SERVICES**

We are a consumer group of companies concerned in this country with research, manufacturing and marketing a very wide range of cosmetics, proprietary medicines and specialized food products, and we seek a Director of Medical Services, to report to the Managing Director.

The Director of Medical Services will be a Doctor who will advise on the medical aspects of all our products. He will be responsible for liaison with the medical profession, for organizing appropriate clinical trials and for ensuring that we maintain the highest standards from the medical point of view for all our products.

This appointment should be of interest to a well qualified man, interested in a field where very few of his profession are at present engaged. This field is becoming more and more widely recognized as one of prime importance in safeguarding the interests of the consumer. There will be ample opportunity to contribute at management level to the growth of a commercial operation on proper medical principles.

The post will be based at Sandwich, Kent, but we also operate in London where two of our plants are located. Some other travel will also be necessary from time to time in connection with the normal responsibilities of the post. We are primarily interested in finding the right man, who may come from quite a wide age group and varied background. The salary will be by negotiation and will recognize qualifications and experience.

The Company operates a non-contributory pension and life assurance scheme and also a bonus scheme. Please apply to:—

**The Group Personnel Manager,  
PFIZER LTD.,  
Sandwich, Kent**

(2496)

**EXPERIMENTAL PATHOLOGIST**

Applications are invited for the post of Experimental Pathologist in the Toxicity Unit to undertake research into factors relating to the toxicity of drugs or potential drugs. An interest in electron microscopy is desirable. Laboratory facilities are excellent and ample opportunity exists for work for a higher qualification. Preferably, candidates should not be over 35 years of age.

Conditions of service include a 37½ hour 5-day week, and membership of the Staff Pension Fund: an Employee's Profit-sharing Scheme is in operation. Successful candidates, if married, may receive a reasonable refund of removal expenses and, if necessary, assistance in house purchase.

Applications, giving brief details of age, qualifications, and experience should be sent to:

The Senior Personnel Officer,  
**IMPERIAL CHEMICAL INDUSTRIES LIMITED,**  
PHARMACEUTICALS DIVISION,  
Alderley Park Near Macclesfield Cheshire. (H.3502)

**Industrial Appointments—contd.****NATIONAL COAL BOARD  
EAST MIDLANDS DIVISION**

Applications are invited from men with an interest in occupational health for two posts of Assistant Area Medical Officer:

(a) For the Chesterfield/Mansfield locality.

(b) For the Nottingham Area/Headquarters Radiological Service.

The successful applicants will be required to reside in the vicinity and will work in the coalfields of Nottinghamshire and North Derbyshire.

Both posts will provide opportunity for the practice of all aspects of industrial medicine in a well equipped industrial health service. Visits below ground will be necessary. Previous experience in industry is not essential but experience in general practice and/or casualty work would be an advantage. Encouragement will be given to study for the Diploma in Industrial Health.

Applicants for post (b) will be given special training in the diagnosis of industrial pulmonary disease so that in due course promotion will be open to a good candidate in either sphere.

Salary will be in the range of £1,800 to £2,150 with prospects of promotion within the service to the next senior post carrying a maximum salary of £3,400. There is a compulsory contributory superannuation scheme with flow-through arrangements with several public bodies.

Applications, giving the choice of post, and giving names of two referees, by November 30, 1965, to Divisional Chief Staff Officer, National Coal Board, East Midlands Division, Sherwood Lodge, Arnold, Nottingham. (2579)

LEDERMYCIN<sup>†</sup>

Demethylchlortetracycline Lederle <sup>†</sup>regd trademark

300 mg tablets  
and  
**Eaton Agent**  
pneumonia

**Enter the Mycoplasma pneumoniae**  
There was a story about a scientist who  
discovered a cure for which there was no  
known disease. Though it was only meant  
for a laugh, this is not wholly incongruous.  
Something quite similar has actually  
happened.

When **Ledermycin** Demethylchlortetra-  
cycline was introduced in 1959, we had  
full confidence it would prove extremely  
effective in a host of acute and chronic

Here are the principal links in the  
chain of events.

1942 'Primary atypical pneumonia' officially  
established by the Surgeon General of the  
US Army to distinguish nonbacterial  
pneumonias of unknown etiology.

1944 'Eaton Agent' isolated from pleural  
secretions of patients with nonbacterial  
pneumonia.

1957 'Eaton Agent' definitely implicated as the  
cause of much primary atypical pneumonia.

1961 **Ledermycin** Demethylchlortetra-  
cycline shown highly effective in 'Eaton  
Agent' pneumonia.

1962 'Eaton Agent' identified as one of the  
so-called pleuropneumonia-like organisms

infections due to a wide range of Gram-  
positive and Gram-negative organisms.  
And it did. What we did not anticipate was  
that it would prove effective in pneumonia  
due to *Mycoplasma pneumoniae*.

**The reason is simple** the disease itself was  
not invented - rather, it was not clearly  
defined - for another four years. Not until  
1963 was enough known about it that the  
causative agent could be assigned a  
taxonomic designation.

(PPLO), already assigned the generic name  
*Mycoplasma*.

1963 *Mycoplasma pneumoniae* proposed as  
species name for 'Eaton Agent'.

So, enter *Mycoplasma pneumoniae*.

And, as a corollary, exit 'Eaton Agent'? Not  
necessarily. Familiar names often die hard.  
*Mycoplasma pneumoniae* has ceased to be  
merely a clinical conversation piece. It is  
estimated that the newly-named organism  
may be responsible for as many as half of all  
hospitalized adult cases of pneumonia. It  
easily qualifies as a public health problem of  
some importance.

The recommended dosage for **Ledermycin**  
in 'Eaton Agent' pneumonia is 900 mg  
daily given as one 300 mg tablet T.I.D.
