## provides rapid relief from

## the pain and discomfort of

## haemorrhoids

Pylura presents adrenaline and beta-eucaine lactate incorporated in a soft lanolin and petroleum jelly ointment to which phenol has been added to prevent infection and inflammation.

When applied locally, adrenaline causes constriction of blood vessels and is employed for this purpose in the treatment of haemorrhoids, fistulae and other inflammatory conditions of the anus and rectum where, for any reason, surgery is not desirable.

When these conditions are painful the local anaesthetic beta-eucaine lactate has been found extremely effective in alleviating such pain.

Pylura is supplied with a nozzle for easy application of the ointment. Full instructions with every tube.

Sanborn's new Modular System adapts easily

At the bedside ..... Individual modules form intensive care systems which fit the specific requirements of critical patients. Any bedside module grouping may be easily extended in capability through the addition of other fully

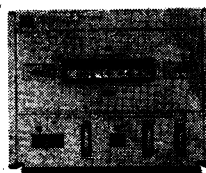

compatible units from Sanborn. Important patient variables, such as ECG, heart rate, temperature, respiration, systolic and diastolic pressures may be indicated and recorded. Units are also available for automatic pacing or synchro-

nized defibrillation. Remote alarms may be included to provide an immediate indication when a patient variable has exceeded individual limits established by the attending physician.

At the central station . . . . . Data displays and patient distress signals enable one nurse to give complete attention to as many as eight critical patients in an intensive care or recovery room. A group of parameters, such as temperature,

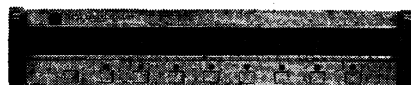

blood pressures, heart rate, and respiration can be simultaneously monitored while distress signals for any of a wide variety of patient parameters can be included at a central point. Also the recording of various physiological signals can

be accomplished without any disturbance to patients. All modules in the Sanborn 780 program have a high degree of built-in reliability which is assured through the use of all solid state components and careful circuit design.

## The "Battle of Britain" that's still being fought

The coming of winter once again underlines the disturbing fact that 15-20,000 people with respiratory symptoms will die during the next 6 months. The unceasing war against diseases of the bronchitis-asthma-emphysema group has plainly not yet been won.

About 30,000 deaths occur annually in Britain from bronchitis alone and the number shows no sign of decreasing. Deaths attributable to chronic bronchitis amount to nearly 10% of all deaths of men aged 45-64—more than from any other respiratory disease. In another category—but none the less important—is the fact that bronchitis currently accounts for more working days off than any other illness.

### Into combat—with tetracycline

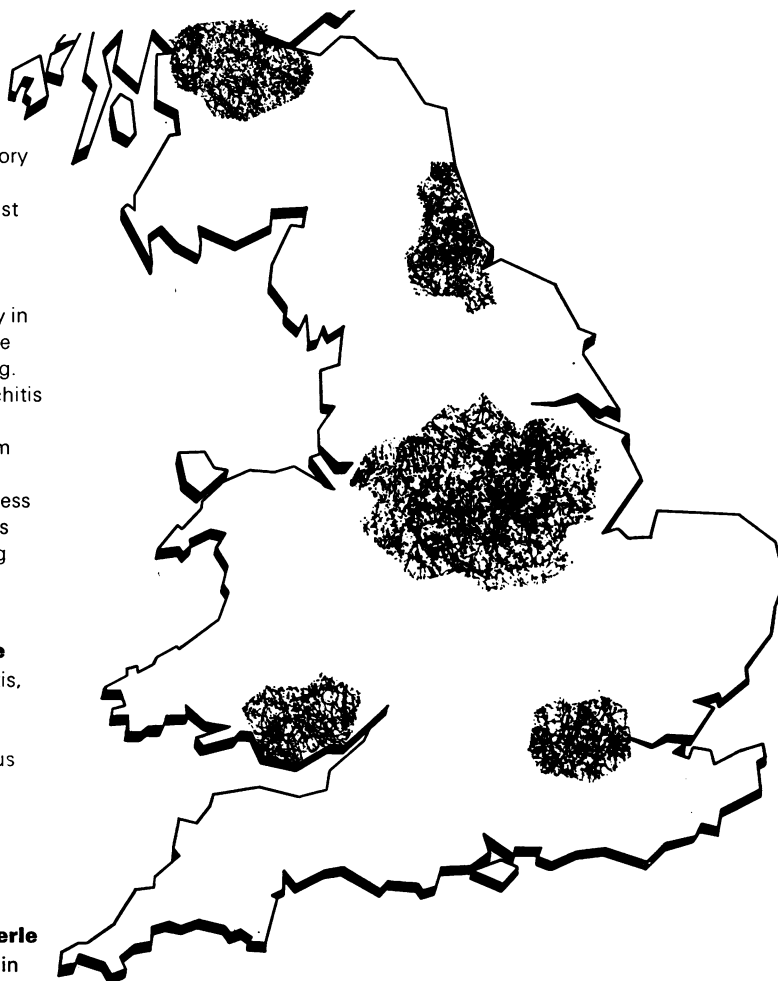

In the treatment of chronic bronchitis, current opinion advocates the employment of a drug capable of suppressing both the *Pneumococcus* and the *Haemophilus influenzae*. The one capable of doing this with safety is tetracycline. 1.

### The most effective weapon— demethylchlortetracycline Lederle

The modern tetracycline—Ledermycin demethylchlortetracycline Lederle—has been shown to provide higher and more sustained antibacterial activity levels in the serum than other tetracyclines. Broad-spectrum coverage persists up to 48 hours after the final dose—a safeguard against stopping treatment too early. "Most clinicians are agreed that tetracycline is preferable to the oxy- and chlor- derivatives . . . demethylchlortetracycline may possibly become the treatment of choice." 2.

# CONSIDER NOW

## summer-long protection against HAY FEVER with

# D-VAC Pollens 3 dose course

Sufferers from 'classical' hay fever and pollen asthma can look forward to relief next summer after desensitisation with D-VAC Pollens. This provides fundamental treatment of pollen allergy, giving a high degree of protection in the majority of patients and halting any tendency to deterioration. Long-term relief will be obtained in most cases from a pre-seasonal course given in each of three successive years.

D-VAC Pollens, Bencard emulsified 'depot' pollen vaccine, is the latest development in desensitising vaccines. The course of three carefully graded injections—fewer than for any other available—has been shown to be at least as effective as the much longer course with aqueous vaccine. Injection from a specially designed syringe ensures the controlled release of active emulsion through surrounding 'shield' emulsion. Local or systemic reactions are therefore rare provided that the recommended technique of administration is employed under antihistamine cover.

D-VAC Pollens is prepared from extracts of 12 varieties of common grass pollens (Bencard group B2), which are responsible for over 80% of cases of 'classical' hay fever and pollen asthma. Two alternative courses are available:

**Primary Course** (D-VAC Pollens Nos. 1, 2 and 3—250, 750 and 3,500 Noon units respectively): designed for patients who have not received pollen vaccine treatment in the last five years, or who are known to be highly sensitive to grass pollens, and for children (aged 6-12 years).

**Advanced Course** (D-VAC Pollens Nos. 2, 3 and 4—750, 3,500 and 7,500 Noon units respectively): designed for patients aged over 12 who have had pollen vaccine treatment in the last five years and whose symptoms are not very severe.

(Patients known to exhibit very strongly positive skin test reactions or suffering from atopic eczema should first be referred to an allergy clinic.)

The 3 injections are administered pre-seasonally at intervals of exactly 4 weeks, the first dose being given in February or March. Full technical details (administration, precautions, possible reactions, etc.) are supplied with each dose, or on request.

## TO BE SURE

of obtaining D-VAC Pollens, it is advisable to prescribe and order before 31st December: no order can be accepted after 21st January.

Prescriptions and orders, for D-VAC Pollens 'Primary' or 'Advanced', should state the exact date (between 14th February and 12th March) on which the first dose is to be injected. The first dose will be despatched to arrive by this date. (D-VAC Pollens is not available outside the U.K.)

But tropical climates give us greater research problems than insect repellents and sun-tan lotions. Amoebiasis was one such problem, an effective, non-toxic amoebicide was the target of intensive research by Boots Research Department for a long time. After much work — research, investigation, clinical trials — Furamide was introduced. It gives a cure rate of over 90% in cases of intestinal amoebiasis without causing serious side effects.

## The PORTOGEN could make life more tolerable for some of your patients

Many patients suffering from chronic respiratory insufficiency are debarred from normal activities by their dependence on a supply of supplementary oxygen.

**THE PORTOGEN** has been designed to provide such a supply in extremely portable and handy form. It contains sufficient oxygen to last for 25 minutes at a continuous flow of 4 litres per minute, and yet the complete outfit, including 100 litre cylinder, regulator, control valve, gauge, and neat, ever-ready carrying case weighs little more than 3lbs.

**THE PORTOGEN** also constitutes a readily available source of oxygen for use in all kinds of respiratory emergencies, and is therefore eminently suitable for your surgery and your car.

**THE PORTOGEN** is simple and safe. Very little instruction is needed in its use, and cylinders may either be exchanged through a chemist, or recharged by the patient from a standard 48 cu. ft. cylinder in his home.

For further information, get in touch with your nearest Branch of British Oxygen. Our representative will be glad to call on you by arrangement.

# Nulacin and only Nulacin provides intragastric milk-alkali drip therapy for the ambulant patient

*“In view of the ineffectiveness of most of the tableted antacids, the milk-alkali tablet (Nulacin) would appear to be the antacid of choice for ambulatory therapy.”*

Med. Times, N.Y., 1958, 1, 74

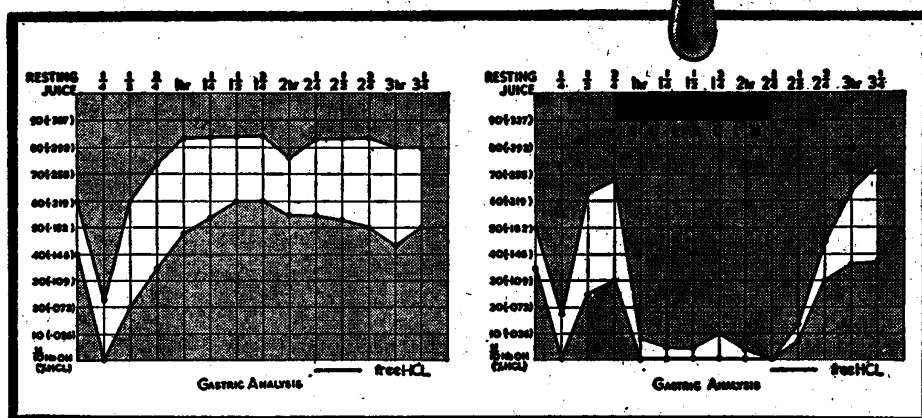

## Safe, Simple, Effective

NULACIN TABLETS provide a safe, simple and effective treatment of peptic ulcer.

In treating peptic ulcer a Ryle's tube may be passed through the nose and into the oesophagus and a mixture of milk and antacid allowed to flow continuously over the affected area. This form of therapy can only be employed in those patients who are in bed and for the ambulant patient Nulacin tablets are preferable.<sup>1</sup> Nulacin tablets are prepared from whole milk combined with dextrans and maltose, together with the trisilicate, oxide and carbonate of magnesium and calcium carbonate. Nulacin tablets when allowed to dissolve slowly in the mouth provide milk-alkali drip therapy. In fact, Nulacin tablets have revolutionized the treatment of peptic ulcer.<sup>6</sup>

broad-spectrum activity

Cephaloridine . . . "is not inactivated by penicillinase and has a remarkably broad spectrum."

*Practitioner*, 1965, **195**, 408

In serious infections of the respiratory tract, especially mixed infections, the unique activity of Ceporin can be used to particularly good advantage. The common infecting organisms in bronchitis and bronchopneumonia are highly sensitive to the bactericidal action of Ceporin, including penicillinase-producing staphylococci. This is why Ceporin frequently gives dramatic clearance of infection, rendering the sputum sterile and providing rapid relief of symptoms.

Ceporin can be safely used in patients hypersensitive to penicillin. In all patients and in all indications the injections are remarkably painless and make the whole

# MOGADON\* AND NATURAL SLEEP

Striking advances have recently been made into the knowledge of sleep with the aid of the electroencephalogram, and it is now recognised that sleep does not consist of a quantitative reduction in cortical activity but of a qualitative change. Hypnotics, by their generalised depressant action on all the brain structures, greatly reduce cortical activity and sleep takes on an abnormal pattern. The development of Mogadon, however, has now made the treatment of insomnia possible without any significant lessening of cortical activity. The sleep induced closely resembles natural sleep; there is no disturbance of the normal rhythmical balance that exists between the sleep and wake processes and the patient will awake refreshed, without hangover and without mental confusion.

The introduction of new Quosh Chekwate means that weightwatchers and diabetics can now enjoy all the pleasures of a refreshing fruit drink whenever they like. Chekwate contains no added sugar or sorbitol, and only negligible amounts of protein and fat. Chekwate avoids the disadvantages of many sugar-sweetened drinks, because it incorporates the new permitted sweetener — sodium cyclamate. Sodium cyclamate is ap-

proved as a safe additive for sweetening soft drinks by the Ministry of Health and the Ministry of Agriculture, Fisheries and Food. It is also approved by the Food and Drug Administration of the U.S. Department of Health, Education and Welfare and by the Canadian Department of National Health and Welfare. Quosh Chekwate is a welcome addition to low carbohydrate diet sheets, and has the full approval of the British Diabetic Association.

# POWER SAFETY COVERAGE **ERYTHROCIN®**

**ERYTHROCIN (erythromycin, Abbott)** is a suitable first-line treatment for the majority of bacterial infections encountered in general practice. It provides powerful yet safe coverage against many causative organisms, leaving the broad spectrum antibiotics free for the specific cases in which they alone are effective.

**POWER** The potency of Erythrocin against the cocci is considerably more than that of tetracyclines or chloramphenicol.

**SAFETY** Erythrocin combines this effectiveness with a remarkable degree of safety. It is, in fact, the least toxic and least allergenic antibiotic currently in use.

**COVERAGE** Erythrocin is effective in a high percentage of the common bacterial infections. Its wide clinical spectrum of activity covers most Gram-positive organisms—especially Staphylococci, Streptococci, Pneumococci and Clostridia—and Gram-negative organisms such as Neisseria and some strains of Haemophilus influenzae.

By prescribing Erythrocin preparations by name you ensure that your patients receive erythromycin in safe, well-absorbed forms that produce effective blood levels rapidly.

Filmtab®

## **ERYTHROCIN®** tablet 250

**ADULTS:** Filmtab® Erythrocin stearate 250 mg 1 tablet every 4 to 6 hours.

## **ERYTHROPED®** Suspension

**CHILDREN:** Erythrocin ethyl succinate 200 mg/5 ml  $\frac{1}{2}$  to 1 tsp every 4 to 6 hrs. 60 ml bottle (24 dose of 100 mg).  
Also available: Filmtab ERYTHROCIN 100; ERYTHROCIN Suspension; ERYTHROCIN I.M. Injection

# Largactil

## in the treatment of alcohol withdrawal

'Largactil' – diminishes restlessness, aggression, suspicion and hostility during the early stages of withdrawal, improving the patient's ability to co-operate in his treatment.

'Largactil' – reduces nausea and vomiting of the alcohol withdrawal syndrome, enabling the patient to increase his food and fluid intake.

'Largactil' – by reducing restlessness enables the patient to sleep naturally without resort to narcotics, thus obviating the risk of further addiction.

'Largactil' – given in conjunction with disulfiram in aversion therapy, helps to reduce the shock induced by the disulfiram/alcohol reaction.

# Is there a bronchial barrier

which prevents some of your patients  
with bronchitis from getting the benefit of the Tetracycline you prescribe?

## THE PROBLEM ...

"Absorption of tetracycline is rather variable from patient to patient."<sup>1</sup>

"Tetracyclines are widely used in bronchitis but

often give relief rather than elimination of bacterial pathogens."<sup>2</sup>

## ...AND ITS EFFECTS

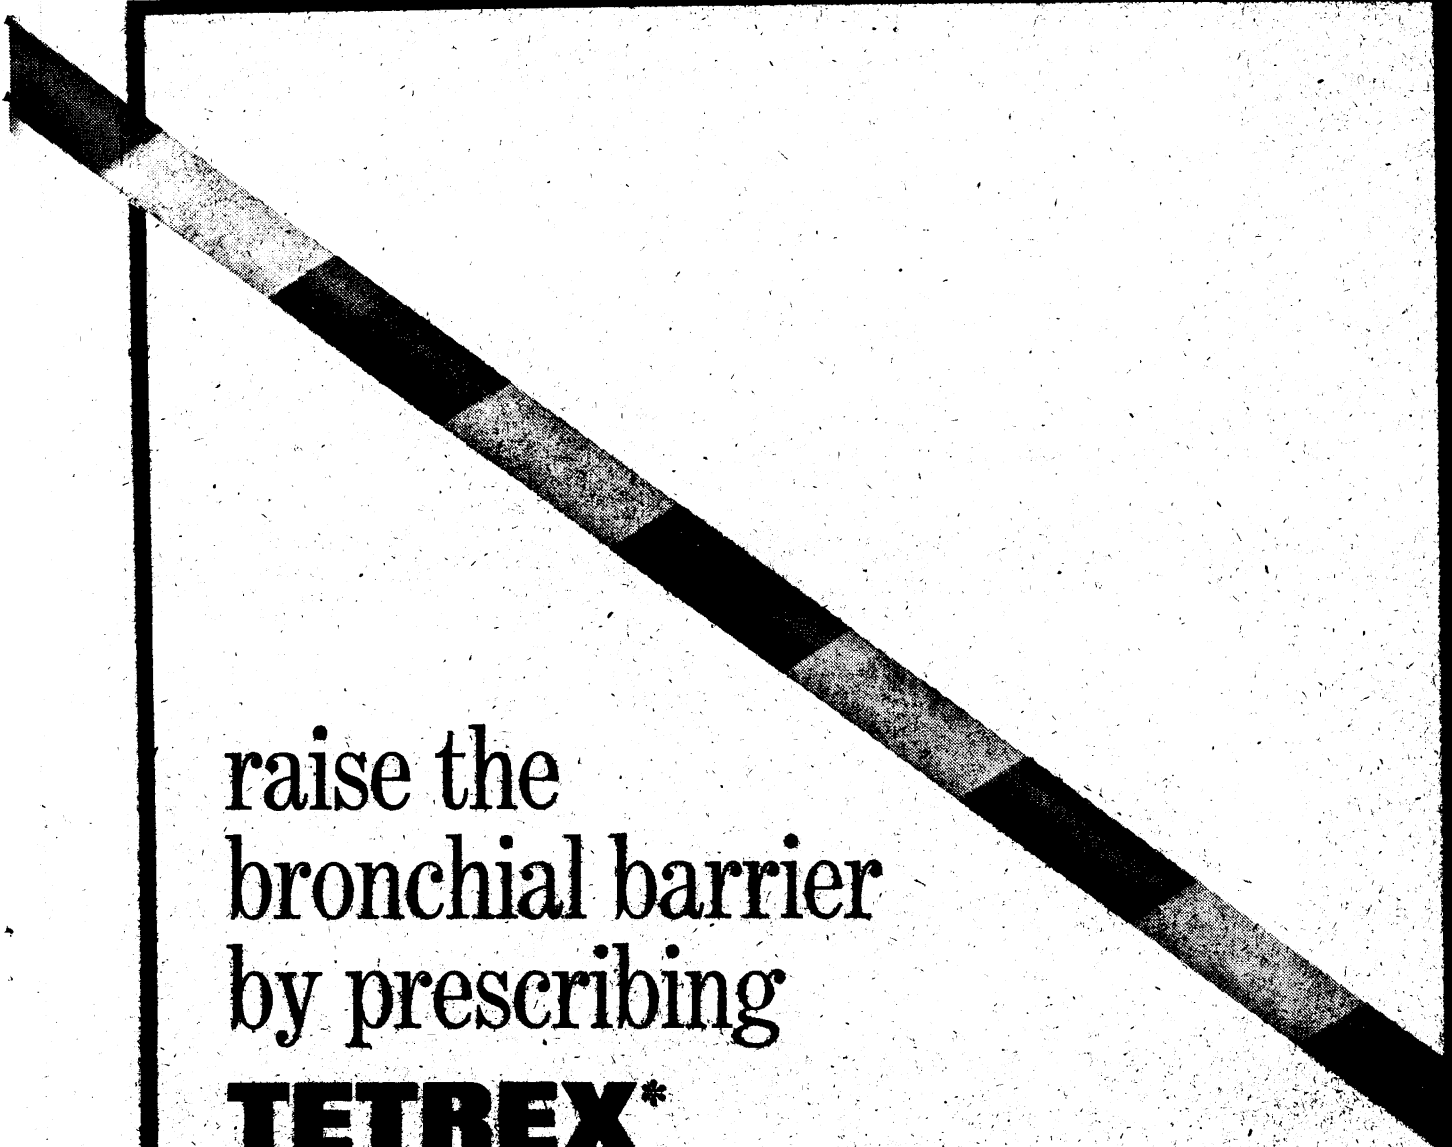

Permanent and irreversible lung damage can be prevented by tetracycline PROVIDED IT IS PRESENT IN SUFFICIENT QUANTITIES IN THE SPUTUM TO INHIBIT *H. INFLUENZAE*.

"The effective sputum level of tetracycline is 0.5 mcg./ml."<sup>3</sup>

BUT THE BRONCHIAL BARRIER  
RESTRICTS THE SPUTUM LEVEL

"The sputum level of tetracycline is 10-30% of the serum level in most patients."<sup>3</sup>

Since it has also been shown that up to 25% of patients can be poor tetracycline absorbers<sup>3</sup>, what happens to those bronchitics who have not achieved adequate serum levels?—they are prevented by the bronchial barrier from producing sputum levels capable of inhibiting *H. influenzae*.

raise the  
bronchial barrier  
by prescribing

**TETREX\***

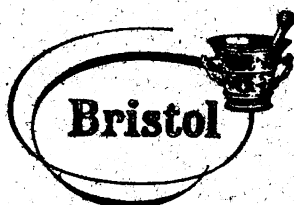

(tetracycline phosphate complex)

the tetracycline that most reliably ensures adequate serum levels even in the poor absorber.

**TETREX PROVIDES YOU WITH ALL THESE ADVANTAGES.** Many studies have shown: Higher average peak blood levels<sup>1</sup> which in some cases may be double those obtained with tetracycline hydrochloride. Faster blood levels<sup>2</sup> ensuring a more rapid onset of therapeutic effect. Reliability of absorption<sup>3</sup>, high tolerance, more efficiency and economy, low dosage produces high blood levels. **Dosage:** 1 G. per day in 4 divided doses of 250 mg. **Presentation** bottles of 16, 100 and 1,000.

# THE ROYAL ARMY MEDICAL CORPS OFFERS OUTSTANDING OPPORTUNITIES FOR GENERAL PRACTICE

with every facility for a varied professional career: good equipment,  
good pay, good allowances, trained staff and generous leave

You may not know that the Army nowadays provides more women and children than soldiers as patients for its General Practitioners. But not only are the opportunities wide and varied: the conditions of service are such that they permit a professional man to work in a professional way. The R.A.M.C. provides modern surgeries with first-class equipment; trained staff to help; a car and driver. All general practitioners are given postgraduate training and have access to military hospitals.

Pay for a married Captain (the rank on entry) is over £2,000 with increases every two years and on promotion. Children's Educational Allowances are paid. A five year Short Service Commission earns a tax-free gratuity of £3,000, and there is excellent retired pay with Terminal Grant for those who go on to a career in the Corps. Six weeks' annual leave is normally granted, and reliefs are provided. Married general practitioners get a furnished house at low rental.

**MEDICAL RESEARCH COUNCIL****FELLOWSHIPS IN  
CLINICAL RESEARCH**  
1966-7

The Medical Research Council invite applications for a further series of their Fellowships in Clinical Research, tenable at centres in the United Kingdom during the academic year 1966-7.

These Fellowships, which are ordinarily restricted to British subjects resident in the United Kingdom, are open to suitably qualified medical or dental graduates who desire to prepare themselves for a career in clinical research. In general, it is intended that each Fellow to whom an award is made under the scheme should be given an opportunity, as part of his training for clinical research, to study methods of research in the basic subject most relevant to his particular clinical interest, and to broaden his experience by working in departments other than his parent department either at the same centre or elsewhere. In appropriate cases, arrangements can be made for Fellows to work in the Council's own research establishments, including the National Institute for Medical Research.

Applications must be made in each case on behalf of the candidate by the head of the department sponsoring the candidate on the understanding that the head of the department will take all possible steps to ensure that a suitable academic post in the clinical department in the same University, Medical or Dental School will be available to the candidate on satisfactory completion of the period of study under the Fellowship.

The awards will be made for a period of one year in the first instance and will be renewable annually up to a maximum of three years in all, subject to satisfactory progress. Stipend will be within the range £1,370 to £1,940 per annum, the point of entry being determined according to age, qualifications and experience, with superannuation provision in addition.

Further particulars and forms of application for these Fellowships may be obtained from the Secretary, Medical Research Council, 20 Park Crescent, London W.1, to whom the completed forms should be returned not later than February 1, 1966. (4405)

**Surgery—contd. on p. lii**

# Before you commit yourself to a practice, work 3 or 5 years in the R.A.F.

You'll do some interesting, out-of-the-rut medicine, see a bit of the world, live well, and 'retire' with up to £3,000, tax free.

**If you are in your pre-Registration year,** here is something for you to think about.

You do not, now, need to take up your workaday N.H.S. career straight away. Furthermore, there are good reasons why you should not be in too much of a hurry. After 3 or 5 years you'll know, far better than you do now, where your particular talents and interests lie, and what sort of a future—personal as well as professional—you want to make for yourself. If you're a 'round peg', you'll know what a square hole looks like.

A short spell in the R.A.F. is, in fact, a *breathing-space*. It gives you the chance to make up your mind about all sorts of things.

You'd get your first job in the R.A.F. 3 months after you joined—probably as junior M.O. at a Station: rather like being an "Assistant with a view". In a typical case you could be one of two doctors with, between you, 1500 to 2500 people to take care of, and your own 'cottage hospital' with wards, theatre and laboratory, and secretarial as well as nursing staff.

*You'd have a shorter list than a civilian G.P., and to this extent you would live a less strenuous life. To compensate, you would give more comprehensive care. It is this—and the variety of your work—that makes practice in the R.A.F. so interesting.*

In the R.A.F. you combine several functions. You are in medical care not only of people, but of the environment they live in, and of the work they do. In proportion you do less curative work and more preventive work than is even possible for most civilian doctors.

A lot of people hold the view that this is the way all medicine should be practised: with the

closest possible integration of the doctor and the community.

## This is the choice you face

Think of two doctors, both aged 40. One went to his practice straight from his teaching hospital, and has been there ever since. The other went into the R.A.F. on a 5-year commission. He lived—and lived well—in the tropics with his family for 2½ years, and, on leave or on duty, visited 7 countries: two European, three Asiatic, and two Australasian. By now he's been in civilian practice for 10 years: he's as well established as the other doctor. But which of the two has got more out of life, and has the richer memories to look back upon?

*In many ways, the transition from hospital into the R.A.F. seems more 'natural' than the movement to civilian practice. You go from one community to another—and they have much in common: both are young, cheerful, energetic, rather self-contained—and at the same time very professional, with a marked sense of purpose. If you can feel, now, that you are going to miss Medical School—think about the R.A.F. Service life would probably be 'right' for you.*

## The vulgar matter of £. s. d. . . .

Next year, if you were in the R.A.F. as a married officer aged 25, your pay and allowances would be over £2000 and your cost of living would be low. If you were single, living in the mess, you'd get the equivalent of first class hotel accommodation and service for only a few shillings a day out of your pay.

*Leave the Service after 3 years, and you get a gratuity of £1,500, cash. Stay on for 5, and*

*you get £3,000. With this, you could put down a deposit on a house and furnish it very well indeed, attic to cellar.*

What a start to a civilian career!

## The time for bold decisions is when you are young and free

Today, because you are at the beginning of your career, you can take a short time out from the main stream of civilian practice just by *deciding to do it*.

Now, you are free to go. In a few years time, you probably won't be.

You'll have a practice 'with your name on it'; children who want a permanent home to strike roots in; and so on. It will be time for you to settle down.

Meanwhile, at the parting of the ways, you have this chance. Now is the time to find out about it.

The best thing is to write off straight away. If you can't—tear this page out and put it in your pocket to remind you.

The address to write to is: Wing Commander D. G. M. Hills, O.B.E., M.B., B.S., D.P.H., R.A.F., Ministry of Defence (M.D. 206M) 1-6 Tavistock Square, London, W.C.1. Please give your age and qualifications.

Every Winter

# PENBRITIN

brings renewed hope to  
the Chronic Bronchitics

... whatever the severity of the condition

One Penbritin capsule four times a day for a week or more brings an excellent response in the majority of patients, reducing the volume of sputum and the severity of exacerbations.

When other antibiotics fail, four Penbritin capsules four times a day for a week or more usually provide effective treatment for advanced bronchitic patients, including those with extensive bronchiectasis. Used in this way, Penbritin is also successful in clearing the sputum of those winter-long purulent cases which would otherwise require continuous antibiotic cover. Early relapse is uncommon and many patients remain free from further infection for as long as two to three months after treatment.

Supporting references are available on request

The black and red capsule contains 250mg ampicillin B.P.

**ANGLO AMERICAN CORPORATION  
(CENTRAL AFRICA) LIMITED**

**MEDICAL OFFICERS**

Applications are invited from registered medical practitioners for vacancies which have arisen at hospitals of the group's copper mines in Zambia—at the Nchanga mine which has two hospitals, one with 250 beds, the other with 70 beds and at the Bancroft mine hospital which has a capacity of some 200 beds.

The positions are as general duty medical officers working under the direction of each company's Chief Medical Officer. The duties are primarily those of the general practitioner and will include the care of both expatriate and indigenous patients in the hospital. Some general surgical experience would be an advantage. The hospitals are modern and well-equipped and include laboratory and X-ray facilities.

Basic commencing salary would depend on qualifications and experience but would be not less than £3,000 per annum. The appointment would be on a contract basis for a minimum period of three years and this may be renewed by mutual agreement. In addition to the salary there is a terminal gratuity in lieu of pension and a free life assurance scheme. There is also a Christmas bonus of 5% of basic salary which is paid in December each year. Up to three-and-one-half adult fares for the employee and his family are paid for the outward and for the return journey upon completion of service. Partially furnished housing at a nominal rental is available and an educational allowance is payable for children attending secondary education outside Zambia. There are generous leave conditions and other benefits which can be discussed at an interview.

Applications, which should give full details of experience, age, qualifications, marital status and the names of two medical referees, should be submitted to:

**The Appointments Officer, Dept. B/101,  
7 Rolls Buildings,  
London, E.C.4**

to reach him not later than December 17, 1965.

**TWO OF A KIND....**

## ....Rauwiloid and the safety pin

Both were a significant advance on existing methods; both are inexpensive and dependable; neither has been superseded. *Rauwiloid's* main characteristics—simplicity of dosage, economy, and freedom from tolerance or serious side-effects—continue to make it an ideal first choice for mild to moderate essential hypertension. Even in more severe cases, *Rauwiloid* can be of considerable value when combined with more potent agents.

# Rauwiloid

Registered trade mark

UNEXCELLED AFTER TWELVE YEARS' USE IN THE TREATMENT OF HYPERTENSION  
Each tablet contains 2 mg. alseroxylon fraction (selected alkaloid hydrochlorides) of *Rauwolfia serpentina*.

Basic NHS prices: 60 tablets 7/8d; 500 tablets 58/-.
