

# New First-aid and transit dressing for Burns

—even unskilled helpers  
can apply it in seconds

The Roehampton burns dressing, made from Pritex polyurethane foam, reduces risk to the patient during the critical pre-hospital period. It also provides a logical preliminary to the modern exposure treatment.

It is so simple and effective to apply that even unskilled helpers can attend to a casualty—quickly and safely. It can be applied in seconds without causing unnecessary pain and with a minimal risk of adherence. It provides good protection against trauma and reduces the risk of infection.

This Roehampton dressing can be removed **in seconds**. It will often save the patient having to be given large doses of drugs, or even a general anaesthetic.

**In the event of multiple casualties**, such as might be caused by large scale explosions or fires, the Roehampton burns dressing has many advantages.

☐ It makes a light, compact package that is easy to transport. ☐ No special care is needed to keep it in perfect condition. ☐ It remains sterile until the package is broken open. ☐ **In all circumstances, it gives the patient the best possible means of protection from further damage while on the way to hospital.**

## ANTIBIOTICS AND THE INTESTINAL FLORA

Treatment with broad spectrum antibiotics suppresses the normal flora, which may be replaced by abnormal resistant organisms causing diarrhoea.

This change can be prevented or reversed by the implantation of *Lactobacillus acidophilus* which has been rendered antibiotic-resistant, and is thus able to multiply freely under these abnormal conditions. The products of growth of the organism are inimical to that of many other bacteria<sup>1,2</sup> and thus contribute to its rapid preponderance over other species.

Oral treatment with antibiotic-resistant *L. acidophilus* in the form of ENPAC has been shown to eliminate *Candida* from the faeces of infants with antibiotic-induced diarrhoea, with relief of symptoms succeeded by rapid gain in weight<sup>3,4</sup> and greatly to reduce the numbers of staphylococci in the faeces of patients treated with tetracyclines.<sup>5</sup>

### *the antibiotic that works for them...*

ERYTHROPED (erythromycin, Abbott) is a logical first choice for the treatment of common bacterial infections of children. Its potency against the cocci is considerably greater than that of the tetracyclines or chloramphenicol. But, this power is gentle power—potency tempered with a remarkable degree of safety.

ERYTHROPED is, in fact, the least toxic and the

least allergenic antibiotic currently in common use. ERYTHROPED is effective over a wide clinical spectrum that covers most common bacterial infections of children met with in general practice. Not least important, ERYTHROPED is presented in a form that *will* be taken. Its pleasant cherry flavour makes it readily acceptable to children—even the very young.

### *...in the pack that works for you*

One 60 ml bottle provides a full five-day course of treatment—twenty-four 100 mg doses. In addition, attention is drawn on the bottle label to the need to

complete the full course of treatment, so that the potential of ERYTHROPED may be fully realised.

## SYNTEX

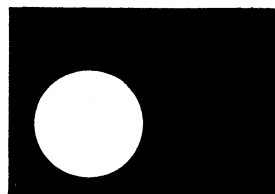

Over half of all the oral contraceptives consumed throughout the world contain Syntex-originated substances.

Syntex—an international pharmaceutical company just 22 years old—leads the world in research and development of steroids. Syntex have initiated many of the involved chemical syntheses on which up-to-date steroid manufacture depends. The Company has inspired products which currently account for nearly 50% of the oral contraceptives taken in Britain.

Syntex is a commercial corporation managed by men of outstanding scientific achievement. Its philosophy lays strong emphasis on research—Syntex spends a greater proportion of its sales revenue on research than any other pharmaceutical company.

Syntex is now established in the U.K. as Syntex Pharmaceuticals Limited. The Company's knowledge and expertise in the field of steroids is now to be made available at first hand to the British medical profession.

Fluocinolone acetonide (Synalar) a steroid originated and developed in the Syntex laboratories<sup>1</sup> is widely recognised for its effectiveness against hitherto resistant skin conditions, including psoriasis.

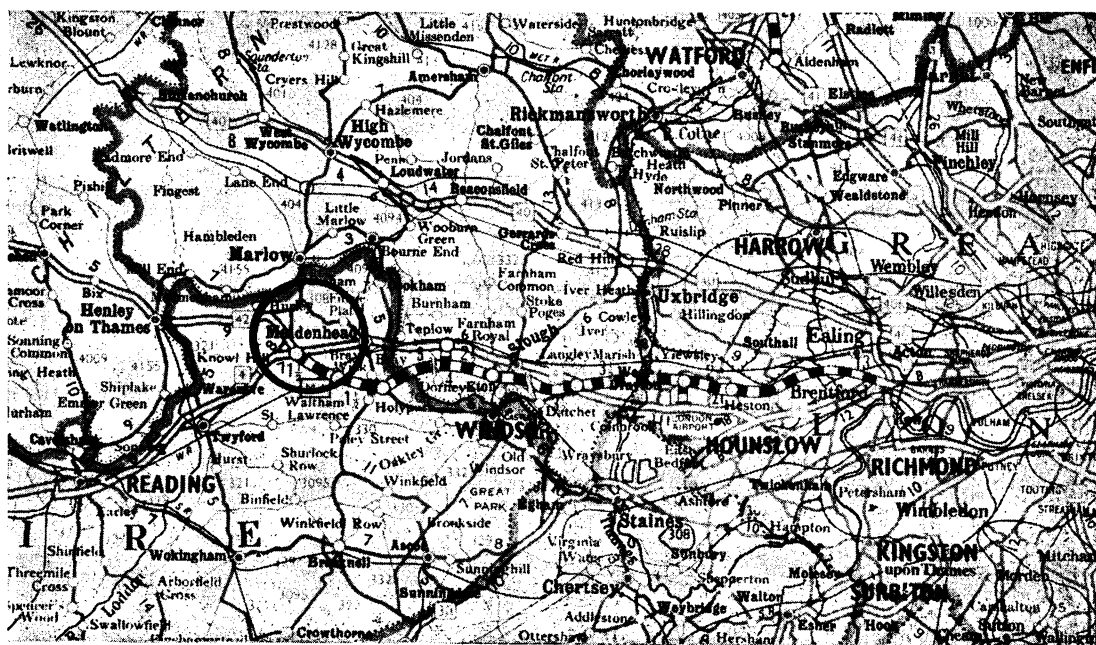

Three of the first five brands of oral contraceptives marketed in the United Kingdom were based on substances developed and produced by Syntex research.

# approach to therapy

## Faster, more intensive action in relieving skin inflammation.

This graph demonstrates the influence of Ultralanum and other topical corticoids applied to an experimentally induced inflammation on the skin of volunteers. From the graph it can be clearly seen that the action of Ultralanum is more intensive, since a return to normal skin colour was achieved after 4 hours, whereas it was between 6-8 hours for the other preparations. Furthermore, a marked reduction in the degree of inflammation could be observed with Ultralanum after as little as one hour.

\*Comparison of anti-inflammatory activity of topical corticoids (modified vasoconstriction test) (1957) Brit. J. Dermatol. **69**, 11. (1962) Arch. Derm. **86**, 611, modified by Kolb (to be published).

Ultralanum is a highly effective corticoid ointment which has proved itself superior to other topical corticoids. Ultralanum achieves excellent results, not only in cases which respond to topical corticoid therapy, but also on occasions, in chronic conditions which were previously resistant to such treatment.

### How Ultralanum's unique biphasic action is of benefit to you and your patients.

Ultralanum contains fluocortolone and fluocortolone caproate. Experiments employing the labelled substances have shown that the former penetrates rapidly into the skin, the latter only slowly.

This results in a dual action providing

rapid, often dramatic relief together with sustained therapeutic effect. Thus, following an initial improvement in the condition, therapy may often be maintained with one application daily. Patients are more likely, therefore, to follow the prescribed regimen with correspondingly better clinical results.

### How Ultralanum sets new standards of economy and convenience in use.

Ultralanum, with its single daily maintenance application offers economy and convenience to the patient.

Further economy is encouraged by the availability of 10 g. packs which avoid expensive "bathroom cabinet wastage" of unused medicament.

### Composition

# Flagyl

**the only effective  
oral trichomonacide**

World-wide clinical use throughout the last six years has shown that it is possible to obtain a 100 per cent cure rate in the treatment of trichomoniasis using 'Flagyl'\* brand metronidazole provided that the recommended dosage scheme is followed and any sexual consorts are treated concurrently to prevent re-infection.

In those few instances where treatment appears to have failed, and if laboratory tests to measure the concentration of metronidazole in the serum show that absorption from the gastro-intestinal tract has been adequate, the possibility of previously masked monilial or Neisserian infection should be considered.

'Flagyl' is supplied as Metronidazole Tablets B.P. 200 mg. in "Prescriber Units" of 21 tablets — a complete course of treatment.

Tests show that 2-Diethylaminoethyl- $\alpha$ -phenylbutyrate Citrate has a more pronounced bronchodilatory effect than ephedrine. Three parts of 2-Diethylaminoethyl- $\alpha$ -phenylbutyrate Citrate producing the same effect as 5 parts of ephedrine. It acts more rapidly than ephedrine, reaches maximum effect somewhat later and falls away at a slightly slower rate. With a mixture of the substances the curve of bronchial dilatation showed that the effect produced was considerably greater than when double the quantity of each substance was administered separately. 4 mg OF THE MIXED SUBSTANCES (CONTAINING 2 mg OF EPHEDRINE) has the BRON-

## Psoriasis ... rapid response to Alphosyl

... even in previously intractable cases. A patient of 48 who had a generalised psoriasis for 20 years was essentially clear in six weeks.<sup>2</sup> A girl of 10 with a strong familial history of psoriasis, cleared almost completely after three weeks' application of Alphosyl Cream.<sup>2</sup> These are just two typical cases from the extensive clinical records underlining Alphosyl's outstanding effectiveness in bringing psoriasis under control.

**New Alphosyl lubricating cream.** A new water-in-oil dosage form, Alphosyl Lubricating Cream is particularly significant in the treatment of the dry, extremely scaly psoriatic lesion confined to the small site and the intertriginous area. Alphosyl cream is especially helpful in clearing psoriatic plaques exposed to constant friction. By enhancing lubrication of the skin folds, it serves to lessen irritation and facilitate healing. Clearing is prompt, even in previously resistant cases. The effectiveness of Alphosyl in this form is attributable in large measure to its unique cream base. This consists of a combination of saturated and unsaturated free fatty acids, naturally occurring triglycerides and esters that resemble the lipoid constituents of normal healthy skin. The vehicle also contains hydrophylic-lipophilic bipolar substances which

Oct. 9th

enhance the moisture uptake and retention of the amphoteric proteins of the stratum corneum. Significantly, it has been shown that squalane, one of the components of the base, is most effective in dissolving a cement substance in psoriatic scales.

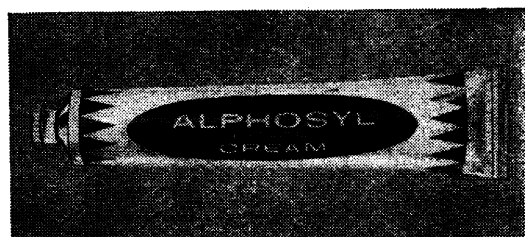

**Formula:** Allantoin 2%+90% alcoholic extract of coal-tar (5=1) 5% in a vanishing type cream base or a smooth, non-greasy lotion base.

## *The SPENCERFLEX for Men*

- ★ Co-relates back and abdominal support
- ★ Allows complete freedom of action
- ★ Protects scar following upper abdominal surgery

*Individually designed, cut and made for each patient*, this support provides pelvic control, abdominal uplift, freedom for muscular action. Thus, at work or play, or during convalescence, the Spencerflex favourably influences better posture and body mechanics.

*Safe* because it will not yield or slip under strain. *Comfortable* because it is made according to the prescribed needs of each patient.

The extra width at back gives exceptional back support. It is light and flexible, with no pressure on prominent part of hip bones.

Designed as an adjunct to treatment following upper abdominal surgery. Especially helpful in early ambulation and where drainage has been maintained for a considerable period. Completely covers and protects the scar without "digging-in" at lower ribs. Relieves fatigue and strain—even that caused by deep breathing and coughing—on tissues and muscles of the wound area. *We know of no other abdominal support for men* which provides these benefits.

Durabolin and Deca-Durabolin stimulate tissue-building and counteract nitrogen loss in many clinical conditions. The effect in osteoporosis and in advanced breast cancer is often marked, leading to an improvement in the patient's general condition, relief of pain and a regression of specific symptoms. Other conditions in which these preparations are useful include severe debility, post-operative catabolism, severe trauma, slow-healing fractures, burns and renal failure—in all these, the correction of an adverse nitrogen balance helps in the patient's recovery. Durabolin is ideal for initial therapy: it is normally given at weekly intervals. Deca-Durabolin is a longer acting form which is ideal for maintenance therapy: it only needs to be given every three weeks.

## *Two birds with one stone?*

It is now widely accepted that recurrent cystitis may indicate the presence of a much more serious condition—chronic 'silent' pyelonephritis. Consequently, in order to avoid subsequent relapse and, even more important, to prevent progressive renal impairment, therapy must be aimed at eradicating *both* conditions. Negram can help you achieve this. Specifically bactericidal against the common urinary pathogens, Negram is well tolerated for long-term use. For over 15 years ACTHAR GEL therapy has brought new life to rheumatoid patients. It is still the most effective treatment and the most reliable long-acting corticotrophin available.

**Safe Stimulation Therapy**

ACTHAR GEL stimulates the adrenal cortex to release the full range of natural steroids, thereby avoiding the hazards of adrenal suppression associated with synthetic corticosteroid therapy.

The toxicity of the more potent analgesics is avoided and such side-effects as may occur are usually due to over-dosage. These are seldom serious and may be reversed by adjusting the dosage.

**For Self-Administration**

When the maintenance dose has been determined, the patient can easily be taught self-administration of ACTHAR GEL. Several thousand self-injections have now been given and many previously crippled patients have returned to, and remained at, their occupations.

# Redundant!

**'... indomethacin is a powerful compound, capable of giving relief of symptoms and reduction of inflammatory signs in several rheumatic disorders.'**

*Brit.med.J.*, 1966, 1, 80 (8 Jan)

For many patients, 'Indocid' has proved to be the turning point in the course of their treatment. For the relief of pain and disability associated with arthritic conditions, 'Indocid' has been dramatically effective in a significant number of cases.

For the majority of patients, oral administration of 'Indocid' (as capsules) is preferred, but 'Indocid' suppositories may be useful where relief of night pain and morning stiffness is particularly important.

## SINGLE-DOSE TREATMENT FOR BOTH THREADWORMS AND ROUNDWORMS

"With its high cure-rate, lack of toxicity, ease of administration, and simplicity of dosage, we regard pripsen as, at present, the remedy of choice for enterobiasis... The doses of piperazine were less than half those hitherto used in seven days' treatment, and there were no toxic effects."

*Lancet, 1960, i, 256.*

"Pripsen... is a highly effective agent against ascariasis."

"Of the 88 patients completing the trial, 74 (84%) were cured by a single dose and, in the remaining 14, repeated dosage... resulted in a 100% cure-rate... Apart from one patient... there were no undesirable side-effects in this series, which included babies of 4 and 5 months."

Try this test. Add Aldactone-A  
to conventional diuretic  
treatment and see for yourself  
how it can improve  
the patient's condition

'In addition, and most important, *he felt well*. He did not feel like the weak, washed-out patient that I have come to expect after intensive diuretic therapy.'

The Use of Aldosterone Antagonists in Cardiological Practice.  
Paper presented before the Cardiac Society of Australia  
and New Zealand, October 1960.

Conventional diuretics act on the proximal renal tubule. They allow reabsorption of sodium and water and loss of potassium to continue at the distal tubule. But Aldactone-A (brand of spironolactone), added to the regimen, acts at the distal tubule, and prevents excessive sodium reabsorption and potassium loss.

*Aldactone-A thus...*

- ☐ Enhances sodium excretion
- ☐ Conserves potassium
- ☐ Overcomes diuretic resistance
- ☐ Improves diuresis
- ☐ Leaves patients feeling well

ALDACTONE-A is a registered trade mark.

**COMMERCIAL APPOINTMENTS—see also p. xlvii****M&B****PHARMACOLOGISTS**

The recent completion of new pharmacological research laboratories in the Research Institute of MAY & BAKER LTD, Dagenham, Essex, has provided openings for pharmacologists at both the senior and less experienced level.

Applicants for the senior posts should have a number of years' research experience and probably a Ph.D. degree or medical qualification. They should be interested in the development of new medical products as well as fundamental pharmacological research, be able to provide stimulating suggestions to their colleagues in biochemistry and synthetic organic chemistry, and to organize and supervise the running of small units of less experienced pharmacologists.

There are also vacancies for pharmacologists or physiologists with less experience who wish to work in active collaborative teams comprising a pharmacologist, biochemist and chemist engaged in the development of new therapeutic agents as well as fundamental pharmacological problems.

Work is carried out in modern well-equipped laboratories, a personal line of research is encouraged as well as publication in scientific journals and attendance at meetings of scientific societies.

The starting salary, which will be a matter for individual discussion, will be in the range of £2,000 to £3,000 for an experienced pharmacologist and in the range of £1,000 to £1,500 for less experienced staff.

Anyone interested in discussing these appointments further should write to the Personnel Officer, enclosing a brief curriculum vitae, and quoting reference No. BM/85/66. The enquiry will be treated in strictest confidence. (18762)

## CLINICAL PATHOLOGIST

A challenging position for a young, enthusiastic pathologist with a primary interest in clinical pathology and research is available with a large, American, mid-western pharmaceutical firm.

Duties include the development, supervision and administration of a quality controlled research clinical laboratory. In addition, consultation with clinical pharmacologists within the company in the design of carefully controlled drug evaluation studies and consultation with investigators, both inside and outside the company, concerning toxicological problems will be integral functions of this position. An opportunity is available to direct and co-operate in epidemiological study programmes designed to evaluate serial baseline laboratory assay values in both normal and diseased individuals. Collaborative efforts with animal toxicologists and pharmacologists in correlating the effects of drugs in animals and in man would also be encouraged.

Facilities include an adequately staffed, equipped and spaced clinical laboratory with a chemical assay section under the supervision of a Clinical Biochemist (Ph.D.) An academic-type library is readily available within the company as are the consultation services of analytical chemists, biomedical statisticians and bio-engineers.

Consultation with non-industry pathologists concerning any problems encountered would be encouraged.

The laboratory is located with all other research facilities of the company in a small, mid-western community with many cultural and recreational advantages. In addition, this community is reasonably close to large, metropolitan centres.

Direct inquiries to:

**Research Manager**  
**Clinical Pharmacology—Phase I**  
**The Upjohn Company**

**ST. ANDREW'S HOSPITAL  
NORTHAMPTON**

FOR NERVOUS AND MENTAL  
DISORDERS

President: The Earl Spencer  
Medical Superintendent:  
James Harper, M.B., F.R.C.P. (Edin.), D.P.M.

This private hospital receives patients, both  
male and female, suffering from nervous and  
mental disorders, including alcoholism and  
senile illnesses. The fees range from eighteen  
guineas per week. Private rooms with special  
nurses can be provided, either in the hospital  
or in one of the villas in the grounds. The  
hospital is situated in 130 acres of pleasant  
grounds which provide all recreational facilities.  
These include a nine-hole golf course,  
sports ground, tennis courts, etc. A Recre-  
ation and Occupation Centre, known as  
Gloucester House, was opened in 1952,  
which comprises an occupational therapy de-  
partment, a swimming pool, a squash court,  
and a library with an adjoining reading  
room.

**WANTAGE HOUSE**

This is a separate reception unit to which  
patients may be admitted. It is equipped  
for the complete investigation of nervous and  
mental disorders by the most modern  
methods. All forms of treatment are avail-  
able.

**MOULTON PARK**

Some two miles from the main hospital is  
the farm of approximately 600 acres. Occu-  
pational therapy is a feature of this branch.  
For terms and further particulars apply to  
the Medical Superintendent (Telephone No  
3454 Northampton) who can be seen in  
London by appointment.
