

SCOTTISH POSTGRADUATE MEDICAL ASSOCIATION

Chairman :
SIR HECTOR MACLENNAN

The Scottish Postgraduate Medical Association is constituted by the Universities of St. Andrews, Glasgow, Aberdeen and Edinburgh and by the Royal College of Physicians of Edinburgh, the Royal College of Surgeons of Edinburgh, and the Royal College of Physicians and Surgeons of Glasgow.

The object of the Association is to develop postgraduate medical education in Scotland by means of co-operative endeavour and co-ordinated planning.

All the requirements of postgraduate medical education are available in Scotland and the Postgraduate Deans and Directors in Edinburgh, Glasgow, Dundee and Aberdeen are prepared to organise integrated courses of training for postgraduate students.

General enquiries should be directed to Professor D. E. C. Mekie, Secretary of the Scottish Postgraduate Medical Association, Pfizer Foundation, Hill Square, Edinburgh 8, from whom further information can be obtained.

Obstetrics in General Practice

Published July 1966

This book is made up of a series of articles printed in the "Current Practice" section of the BRITISH MEDICAL JOURNAL. It is designed to give a lucid and practical account of obstetrics as it is carried out in the patient's home or in a maternity unit, with special emphasis on the role of the general practitioner and his relationship to the consultant obstetrician and the hospital. The principal authors are consultant obstetricians, but to ensure that the general practitioner's own view and special experience should be represented the consultant contributors were asked to prepare their articles in collaboration with general practitioners. The book as a whole is a product of such co-operative effort. It will prove a useful guide to this important branch of medical practice.

Isolates the noise so only the cardiac signal goes on paper

NEW SANBORN 500 VISO

In systole and diastole, the human heart produces a maximum signal of only a few millivolts between two ECG limb electrodes. Mixed in with this tiny signal may be some unwanted electrical "noise", caused by power lines, nearby X-ray or diathermy machines, or even ordinary office equipment. Until now, eliminating this noise from the record usually meant time-consuming adjustments and rerunning records until the complexes were clear.

The new Sanborn 500 Viso-Cardiette now isolates such noise from the cardiac signal to an extent never before achieved—and simultaneously maintains even greater protection for the patient without the use of fragile patient fuses. The "500", in effect, sees all

of the wanted ECG signal and little or no noise, to give you a diagnostically useful tracing with greater ease and speed.

This highly refined new instrument also uses the new Redux® Creme—an improved non-abrasive electrolyte easily applied and removed *without rubbing*... and has operating features including two chart speeds and three recording sensitivities, simplified control arrangement, color-coded patient cable and pictorial connection diagram on the instrument panel. Housed in a compact, vinyl-clad aluminum case that's easy to carry, or effortlessly rolled on a matching mobile cart. Price: £278. For further information please call or write.

When symptoms of anxiety and depression co-exist, both facets of the patient's condition can usually be relieved by treatment with 'Tryptizol', which possesses both antidepressant and tranquillising properties. With 'Tryptizol', there is generally rapid relief of anxiety and insomnia.

'Tryptizol' is not a monoamine oxidase inhibitor; dietary restrictions are unnecessary.

Saunders announces a New (3rd) Edition of a great reference work—widely acclaimed as one of the finest reference books in cardiology.

Friedberg—

DISEASES OF THE HEART

By Charles C. Friedberg, M.D.

The Mt. Sinai Hospital, New York, and College of Physicians and Surgeons, Columbia University

During the past 15 years the name "Friedberg" has become synonymous with authority, up-to-dateness, practicality, completeness and understandability among reference books in cardiology.

This *New (3rd) Edition* is beyond question the finest "Friedberg" yet. Here is a remarkably cohesive, logical and balanced presentation of all the factors that together make up the clinical picture of the individual with disease or dysfunction of the heart. Virtually every problem regarding recognition, differential diagnosis, pathological physiology, treatment and prognosis is fully examined and effectively resolved.

Nearly 800 pages have been added—despite drastic and judicious pruning of older material. Dr. Friedberg has added a wealth of new material to the sections on angiocardiography, congenital heart disease, catheterization, vectorcardiography, phonocardiography, and the new electronic aids to management. The many fronts of cardiac surgery in regard to indications, contraindications and the operative procedures themselves are superbly illuminated.

Whether you purchase this great book in the single volume or in the easier to handle two-volume set, you will receive a vast storehouse about all the worth-while information on heart disease available today.

1840 pages. 243 Illustrations. In single volume set £7 14s. 0d.

In two volume set £9 2s. 6d.

SELECTION OF APERIENT

It is clear that the efficient treatment of constipation requires the limitation of laxatives to preferably one aperient of general efficacy; the laxative must be inexpensive, easy to administer, and physiological in its action, so that a rational treatment of bowel re-education (in contrast to the symptomatic and temporary relief by purging) can be initiated. Of all the laxatives available, the claims of standardized senna for general use appeared outstanding.

World-wide clinical use throughout the last six years has shown that it is possible to obtain a 100 per cent cure rate in the treatment of trichomoniasis using 'Flagyl'* brand metronidazole provided that the recommended dosage scheme is followed and any sexual consorts are treated concurrently to prevent re-infection.

In those few instances where treatment appears to have failed, and if laboratory tests to measure the concentration of metronidazole in the serum show that absorption from the gastro-intestinal tract has been adequate, the possibility of previously masked monilial or Neisserian infection should be considered.

'Flagyl' is supplied as Metronidazole Tablets B.P. 200 mg. in "Prescriber Units" of 21 tablets — a complete course of treatment.

how much does **loneliness** weigh?

Loneliness is just one of the emotional stresses that may lead to compulsive overeating. In treating the obese patient, merely curbing the appetite is unlikely to provide a complete answer: the stresses must be countered and adequate compensation provided for the solace formerly derived from overeating. *Durophet-M* does just that. It contains not only laevo- and dextro-amphetamine (ratio 1:3) — probably the most effective appetite depressant available — but also methaqualone, a calmative to counter the underlying emotional factors that motivate the compulsive overeater. In obesity, with its attendant hazards to health, these agents together provide more effective weight loss than do simple appetite depressants. Dosage is simple — just one capsule daily.

Basic NHS prices: Bottles of 30 capsules 12.5 mg. 7/4 — 20 mg. 8/- . Bottles of 300 capsules 12.5 mg. 49/8 — 20 mg. 54/-.

Adrenergic stimulation of the heart increases myocardial oxygen consumption to a greater extent than that required for increased cardiac work. Injections of adrenaline produce ECG changes characteristic of myocardial ischaemia and in susceptible individuals provoke typical attacks of angina.

Since angina usually results from excessive sympathetic stimulation of the heart during periods of emotion or exercise, blockade of cardiac adrenergic receptors provides a new approach to the prevention of myocardial anoxia.

Exercise tests and double-blind clinical studies have established the benefits of 'Inderal' to patients with angina pectoris, both in terms of improved effort tolerance and a reduction in the frequency of attacks.

**Thanks men —
now Exolan takes over.**

Suddenly the treatment of psoriasis with coal tar could well be out-of-date. It has taken 2,000 years to discover an acceptable alternative to crude coal tar for treating psoriasis. All the subsequent preparations have well-known disadvantages. Cosmetic coal tars exhibit a very slow rate of healing; steroids under polythene cause discomfort to the patient and there is a risk of systemic side effects; dithranol, until now the best overall treatment for psoriasis, requires constant supervision.

Exolan paste is a new preparation which attacks psoriatic lesions with the striking effectiveness of dithranol, but without its unpleasant side-effects of burning and staining. Presented as a paste, it can be safely prescribed for application by the patient, in his own home.

Unlike steroids, there is no rapid relapse on cessation of treatment.

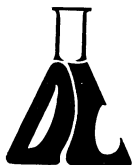

Practically every hospital skin department in Great Britain is now using Exolan Paste. This remarkable new British discovery is ideally suited for G.P. prescription.

How commonsense can you get...

Haelan is a new preparation for steroid-responsive skin conditions.

Its advantages are strictly practical.

Haelan contains a proven steroid, flurandrenolone, in a concentration sufficient to treat all but the most severe dermatoses.

It comes in a realistic 60 gramme tube—enough for routine treatment without the need for repeat prescriptions.

Because of the pack size, and because the steroid content has not been needlessly increased, Haelan is far more economical than comparable preparations.

Almost anything can cause eczema

and almost any eczema may be infected...

although not apparently so

Investigations have shown that a high proportion of cases of eczema and psoriasis harbour 'hidden' infection which can only be detected on culture. Remiderm, being a combination of a modern corticosteroid, triamcinolone acetonide, and a new antibacterial/antifungal agent, halquinol, can eliminate this risk of 'hidden' infection and treatment time is shorter than when a corticosteroid alone is applied.

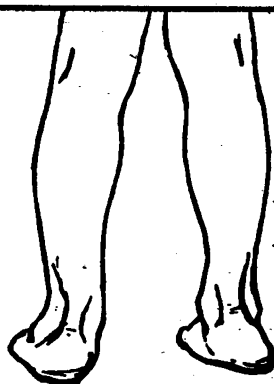

Remiderm ointment and cream: triamcinolone acetonide 0.025% and halquinol 0.75%: 15gm. tubes, basic NHS price 7/9. Remiderm spray: triamcinolone acetonide 4.95mg. and halquinol 31.2mg. in a 75gm. canister, basic NHS price 16/-.

correct flat feet...

Do you recommend an external wedge? Those outside wedges soon wear away, and very often the child is made to feel self-conscious because his shoes look different from other children's. They also disturb the plane of forepart and heel. Surely it's more logical to have a wedge built in between the inner and outer sole where it remains invisible and completely unaffected by wear or repair of the shoe. That is how Start-rite INNERAZE shoes are made—on remedial lasts specially adapted to accommodate the internal wedge. That is why they are the only practical and thoroughly effective solution to this problem. Information from Mr. C. James, Fitting Consultant, James Southall & Co. Ltd., Crome Road, Norwich, NOR 60A. a wolf in sheep's clothing?

Family doctors are becoming increasingly more aware that a seemingly simple bout of cystitis may hide a potential killer. The hidden killer is pyelonephritis which, because it is often subclinical, usually goes undetected until death ensues from renal failure. Indeed it has been stated that "Pyelonephritis has been found in 6 to 20% of autopsies; yet the clinical diagnosis . . . was made in only one-fifth of these cases"¹. More and more doctors decide to take no chances with cystitis. They demand a drug that is bactericidal, specific and well tolerated. That's why they choose Negram. Negram, ideally; meets all these requirements.

Surgery—contd. on p. xxxviii

Before you commit yourself to a practice, work 3 or 5 years in the R.A.F.

You'll do some interesting, out-of-the-rut medicine, see a bit of the world, live well, and 'retire' with up to £3,000, tax free.

Your first job in the R.A.F. would probably be junior M.O. at a Station: rather like being an 'Assistant with a view'. In a typical case you could be one of two doctors with, between you, 1500 to 2500 people to take care of, and your own 'cottage hospital' with wards, theatre and laboratory, and secretarial as well as nursing staff.

You'd have a shorter list than a civilian G.P., and to this extent you would live a less strenuous life. To compensate, you would give much more comprehensive care. It is this—and the variety of your work—that makes practice in the R.A.F. so interesting.

In the R.A.F. you combine several functions. You are in medical care not only of people, but of the environment they live in, and of the work they do. In proportion you do less curative work and more preventive work than is even possible for most civilian doctors.

A lot of people hold the view that this is the way all medicine should be practised—with the closest possible integration of the doctor and the community.

This is the choice you face

Think of two doctors, both aged 40. One went to his practice straight from his teaching hospital, and has been there ever since. The other went into the R.A.F. on a 5-year commission. He lived

—and lived well—in the tropics with his family for 2½ years and, on leave or on duty, visited 7 countries: two European, three Asiatic, and two Australasian. By now he's been in civilian practice for 10 years; he's as well established as the other doctor. But which of the two has got more out of life, and has the richer memories to look back upon?

In many ways, the transition from hospital into the R.A.F. seems more 'natural' than the movement to civilian practice. You go from one community to another—and they have much in common: both are young, cheerful, energetic, rather self-contained—and at the same time very professional, with a marked sense of purpose. If you can feel, now, that you are going to miss Medical School—think about the R.A.F. Service life would probably be 'right' for you.

The time for bold decisions is when you are young and free

Today, because you are at the beginning of your career, you can take a short time out from the main stream of civilian practice *just by deciding to do it.*

Now, you are free to go. In a few years time, you probably won't be.

You'll have a practice 'with your name on it'; children who want a permanent home to strike root in; and soon. It will be time for you to settle down.

Meanwhile, at the parting of the ways, you have this chance. Now is the time to find out about it.

The address to write to is: Wing Commander D. G. M. Hills, O.B.E., M.B., B.S., D.P.H., R.A.F., Ministry of Defence (M.A.1/724EE5), 1-6 Tavistock Square, London, W.C.1. Please give your age and qualifications.

Medical cadetships. Commissions as a cadet are available to students who have passed second M.B. (or equivalent). Initially your basic pay would be £630 p.a. Appropriate R.A.F. allowances, examination and tuition fees are paid in addition. You would continue to live and work as a medical student and when fully registered you would start work in the R.A.F. as a doctor in the rank of Flight Lieutenant on a five year short service commission. Further information may be obtained from the above address.

approach to therapy

Faster, more intensive action in relieving skin inflammation.

This graph demonstrates the influence of Ultralanum and other topical corticoids applied to an experimentally induced inflammation on the skin of volunteers. From the graph it can be clearly seen that the action of Ultralanum is more intensive, since a return to normal skin colour was achieved after 4 hours, whereas it was between 6-8 hours for the other preparations. Furthermore, a marked reduction in the degree of inflammation could be observed with Ultralanum after as little as one hour.

*Comparison of anti-inflammatory activity of topical corticoids (modified vasoconstriction test) (1957) Brit. J. Dermatol. 69, 11. (1962) Arch. Derm. 86, 611, modified by Kolb (to be published).

Ultralanum is a highly effective corticoid ointment which has proved itself superior to other topical corticoids.

Ultralanum achieves excellent results, not only in cases which respond to topical corticoid therapy, but also on occasions, in chronic conditions which were previously resistant to such treatment.

How Ultralanum's unique biphasic action is of benefit to you and your patients.

Ultralanum contains fluocortolone and fluocortolone caproate. Experiments employing the labelled substances have shown that the former penetrates rapidly into the skin, the latter only slowly.

This results in a dual action providing

rapid, often dramatic relief together with sustained therapeutic effect. Thus, following an initial improvement in the condition, therapy may often be maintained with one application daily. Patients are more likely, therefore, to follow the prescribed regimen with correspondingly better clinical results.

How Ultralanum sets new standards of economy and convenience in use.

Ultralanum, with its single daily maintenance application offers economy and convenience to the patient. Further economy is encouraged by the availability of 10 g. packs which avoid expensive "bathroom cabinet wastage" of unused medicament.

Composition

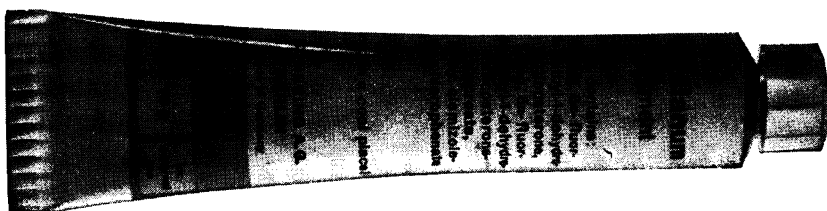

ULTRALANUM PLAIN contains 0.25% fluocortolone and 0.25% fluocortolone caproate.

ULTRALANUM—with 2.5% clemizole-hexachlorophane for those cases for which an antibacterial agent is required.

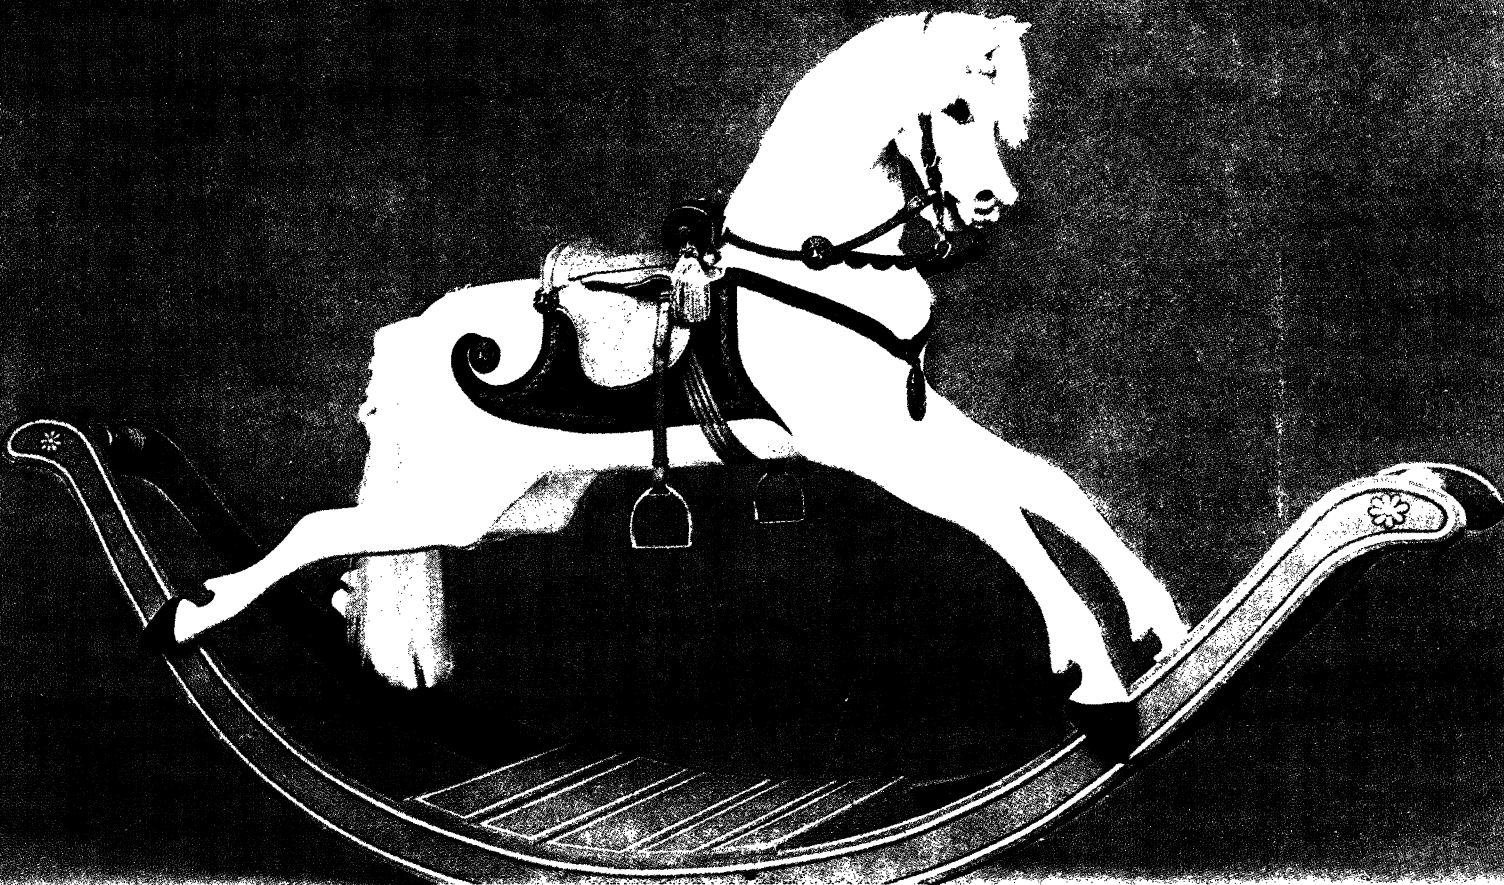

Both these ointments are completely non-staining and cosmetically acceptable.

For children **PENBRITIN** is the safer broad spectrum antibiotic

—the only one which is both oral and bactericidal, with the additional advantage of safety for all ages.

Whenever broad spectrum therapy is required, from the neonate to the older child, Penbritin affords the safety of a penicillin. No interference with the calcification of teeth and bone, or significant change in blood picture has been reported in over 700 published papers on Penbritin.

Penbritin is effective

because it is bactericidal, highly active against a wide range of pathogens and well absorbed after oral administration giving high blood, tissue and urine levels.

These factors mean outstanding effectiveness in the treatment of recurrent chest infections, bronchitis, pneumonia, tonsillitis, otitis media, cystitis, pyelonephritis and other bacterial diseases.

And acceptable

because Penbritin Syrups are palatable, pleasant tasting liquids, well liked and well tolerated by children of all ages. Crushable paediatric tablets are also available.
