

Vasogen Silicone

—for skin protection in cases of
bedsores, napkin rash
cracked skin, itching
and other skin disorders

Vasogen Silicone has high water repellent properties and protects the skin from irritants induced or aggravated by contact with aqueous liquids, body fluids and exudations. It is effective also in the treatment of sore buttocks, excoriation, plaster sores, maceration, some conditions of eczema and can be used after colostomy. Vasogen Silicone is easy to apply and is almost invisible on the skin. It provides an acceptable protective barrier that is maintained effectively for lengthy periods.

SPARE YOUR PATIENT WASTED DAYS OF PAIN

Fibrositis and myalgia... sprains and strains... lumbago... sciatica... displaced intervertebral disc... in these and many other painful muscular conditions *Norgesic* gives the patient a better chance of early pain relief than simple analgesics, and quickly gets him on the move again. *Norgesic* contains not only an analgesic—paracetamol—but orphenadrine citrate, a highly effective agent to relieve painful muscle spasm.

Because muscle tension and stiffness so often contribute to pain¹, this formulation can give relief extending beyond the scope of simple analgesics. Furthermore, the patient contributes to his own recovery through his ability to move freely again^{1,2}.

By relieving local pain and easing stiff and painful muscles, *Norgesic* gives rapid and reliable relief, restores mobility and cuts short the time the patient is out of action.

1. The Practitioner (1963) 191: 660. 2. Medical World (1959) 91: 20

Each *Norgesic* tablet contains Orphenadrine Citrate B.P.C. 35 mg. and Paracetamol B.P. 450 mg.

Dosage is two tablets three times daily.

Basic N.H.S. cost: 500 tablets, 71/4; 100 tablets 14/8

Largactil

'Largactil'—diminishes restlessness, aggression, suspicion and hostility during the early stages of withdrawal, improving the patient's ability to co-operate in his treatment.

'Largactil'—reduces nausea and vomiting of the alcohol withdrawal syndrome, enabling the patient to increase his food and fluid intake.

'Largactil'—by reducing restlessness enables the

patient to sleep naturally without resort to narcotics, thus obviating the risk of further addiction.

'Largactil'—given in conjunction with disulfiram in aversion therapy, helps to reduce the shock induced by the disulfiram/alcohol reaction. Further information on this M & B brand Medical Product is available on request.

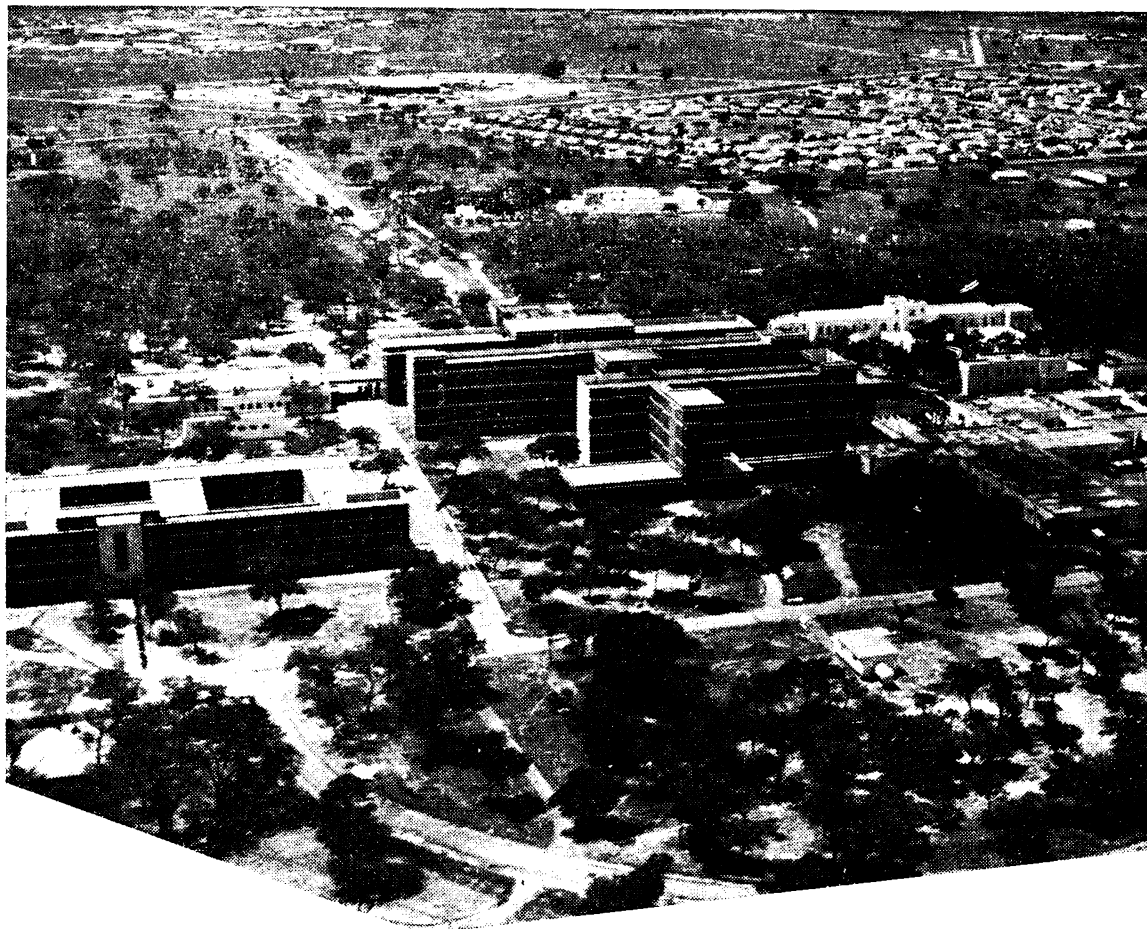

'Largactil' is a trade mark of MAY & BAKER LTD Dagenham, Essex indicating its brand of Chlorpromazine Hydrochloride B.P.

FROM A DOCTOR'S VIEWPOINT...

Life in Rhodesia today offers endless opportunities with the most modern facilities in all branches of Medicine.

Government Medical Officers

Enjoy a high standard of living, with low income tax, an excellent climate, with generous leave conditions and a sound pension scheme.

Gross Salary: £2,360 x £100 to £2,660 x £80 to £2,900 p.a.

Promotion prospects: There are 21 posts of District Medical Officer where the doctor is in charge of his own District Hospital, and a group of smaller hospitals. Promotion to this grade will place the officer in the scale carrying gross emoluments of £3,000 x £150 to £3,300 p.a.

In addition there are over 40 senior posts (including Medical superintendents and those in the main specialities) with gross emoluments of up to £5,100 p.a. These posts are normally filled by the promotion of suitably qualified serving officers.

Leave: includes 36 days a year vacation leave which may be accumulated up to 230 days. Up to 184 days accrued leave may be taken at any one time. In addition, 12 days non-cumulative occasional leave may be added to vacation leave.

A holiday benefit of up to £300 may be paid every three years to a person proceeding on vacation leave of 30 days or more.

Fares: paid to station of appointment in Rhodesia for successful applicants and their families.

Educational facilities in Rhodesia are considered excellent up to and including University level.

Contract appointments on short term conditions can be considered. These conditions will vary slightly from above.

Application forms and further details may be obtained by writing to the Secretary for Health, P.O. Box 8204, Causeway, Rhodesia.

Triominic

Oral Nasal Decongestant **WANDER**

'Triominic' timed-release tablets and orange-flavoured syrup contain antihistamines and a decongestant in balanced proportions to ensure relief from nasal congestion for between 6 and 8 hours. The active constituents of 'Triominic'—the original *oral* decongestant—reach the nasal mucosa systemically. This obviates the rebound congestion which may follow the topical use of decongestants.

Formula per timed-release tablet.

Phenylpropanolamine hydrochloride.....	50 mg.
Mepyramine maleate B.P.....	25 mg.
Pheniramine maleate.....	25 mg.

REVIEW ARTICLES

The selective abstracting service offered by the journal is already widely known. The institution of the current series of Review Articles has greatly increased its popularity. These articles, like the abstracting service which they are designed to supplement, are directed as much towards the general reader as to the specialist, providing him with authoritative surveys of the growing points of medicine, each complete with an up-to-date bibliography. Other articles that have appeared or are scheduled for early publication are:

LEPETIT'S INDUSTRIAL AND COMMERCIAL ORGANIZATION COVERS OVER 100 COUNTRIES THROUGHOUT THE WORLD

Lepetit S.p.A. was established in 1868. The first plant was built at Garesio, in Piedmont. Two original compounds, Almateine and Nevralteine, patented throughout the world and included in the Official Italian Pharmacopeia, were amongst the first compounds synthesized in the Lepetit Laboratories. The most important products prepared by Lepetit during the last

sixteen years, either by their own original processes or under licence from leading international pharmaceutical companies, include: chloramphenicol - SYNTHOMYCETINE® (1949), tetracycline - AMBRAMYCIN® (1953), corticosteroids (1955), meprobamate - PERTRANQUIL® (1956) and rifamycins - RIFOCIN® (1961), RIFOCIN® M (1965). Today Lepetit has plants all over the world.

In Italy, at Garesio, Milan-Bovisa, and Torre Annunziata (Naples). Abroad, in Argentina (Buenos Aires), Brazil (São Paulo), Chile (Santiago), France (Seclin), India (New Delhi), Iran (Teheran), Morocco (El Jadida), Mexico (Mexico City), Nigeria (Lagos), Portugal (Venda Nova), Thailand (Bangkok) and Spain (Madrid).

**The fact that Gynovlar 21
was the first 21 tablet
oral contraceptive is a matter
of some company pride**

when all facts are considered the choice must be

but what matters clinically is the added security this idea provided for millions of women

The simple idea of an extra tablet put Gynovlar 21 ahead of the field in oral contraceptive administration. Now the 21-tablet dosage scheme is becoming standard practice as a method of virtually eliminating patient error in oral contraception.

GYNOVLAR 21 PROVIDES:

First, four-fold security by ovulation control, by protective changes in the endometrium and cervical mucus and also by the 21-tablet dosage scheme which virtually eliminates patient error.

Secondly, Gynovlar 21 is extremely well tolerated. Tolerance depends not only on the choice of progestogen, but especially on the type of dosage of oestrogen. Gynovlar 21 tablets contain 3 mg. norethisterone acetate – a progestogen used throughout the world in gynaecological medication and renowned for its

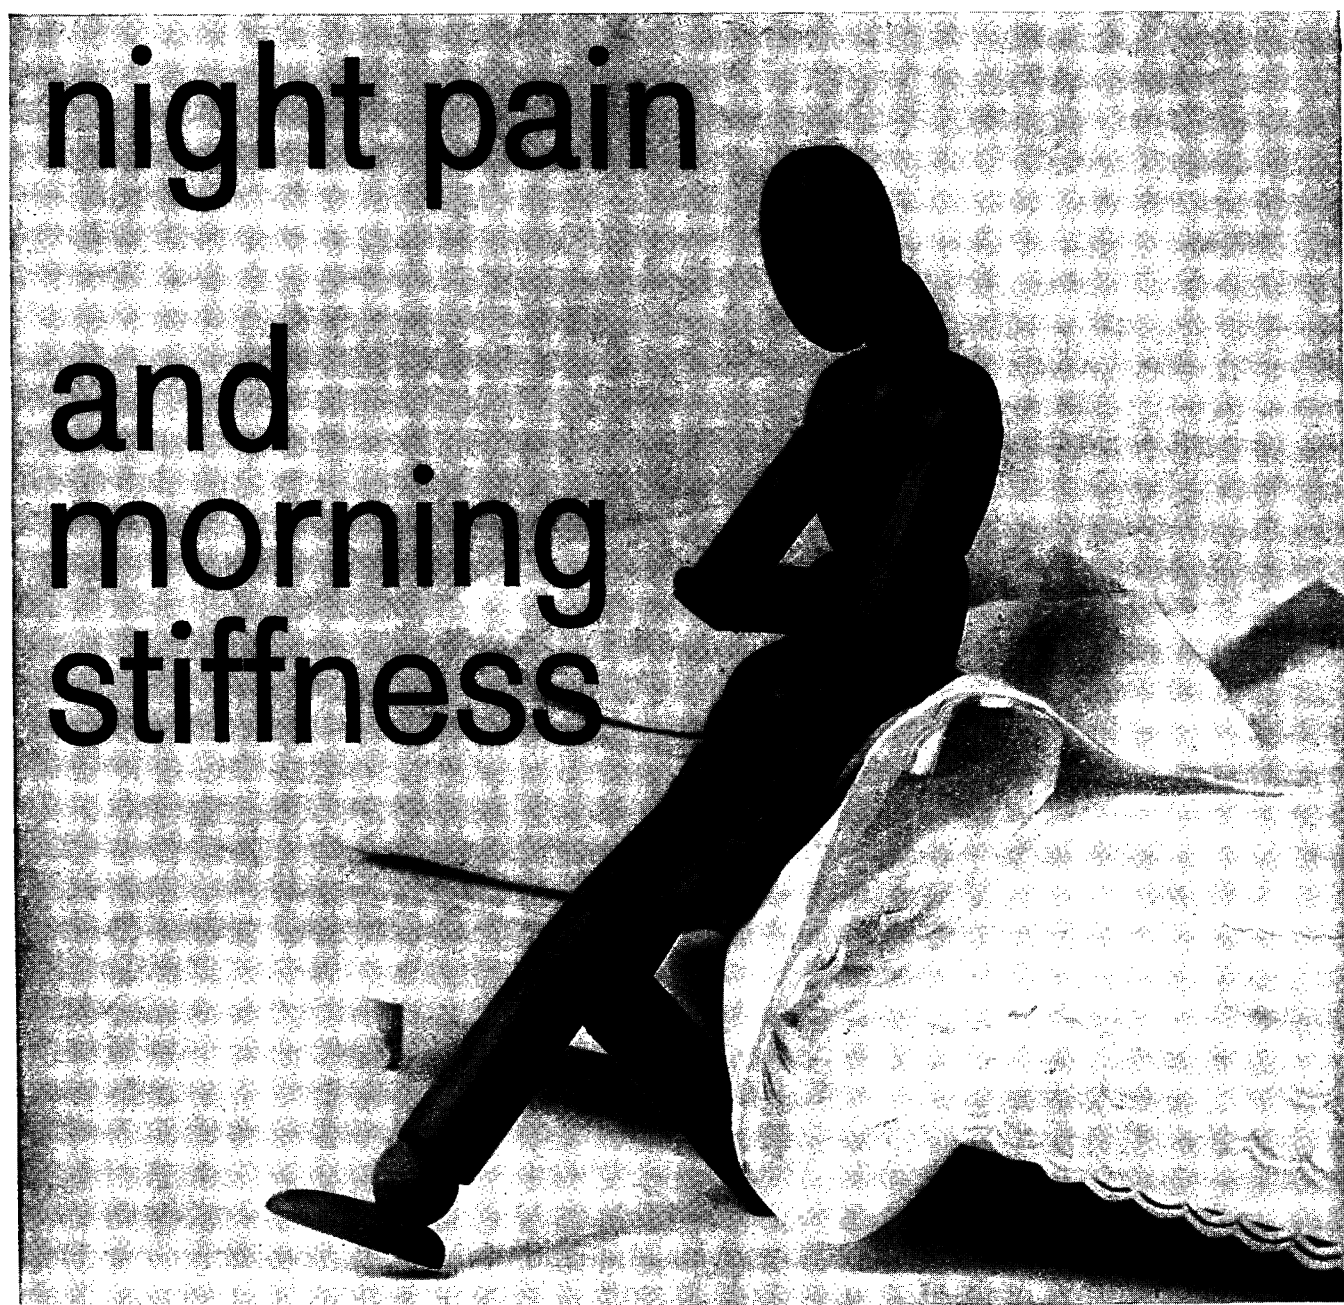

excellent tolerance – and 0.05 mg. ethinylœstradiol B.P., which is the lowest dose to be employed for oral contraception. No other presentation contains less oestrogen, many contain more.

Thirdly, the substances used in Gynovlar 21 produce normal menstrual cycles, which have been described as being of 'almost clockwork precision'. Thus Gynovlar 21 is ideally suited to the 21-tablet dosage scheme, which this product pioneered and the advantages of which have, meanwhile, been generally recognized.

***Brit.med.J.*, 1965, 1, 1354 (22 May)**

For the majority of patients, oral administration of 'Indocid' as capsules is preferred, but 'Indocid' Suppositories are particularly valuable in the relief of night pain and morning stiffness, experienced by so many arthritic patients. The prolonged relief of pain afforded by 'Indocid' Suppositories will amply justify this method of administration in such patients.

NULACIN

Dosage:

One to three tablets daily as prescribed in the mouth.

“In view of the ineffectiveness of most of the tablet antacids, the milk-alkali tablet (Nulacin) would appear to be the product of choice for ambulatory therapy.”

HORLICKS PHARMACEUTICALS LIMITED, WINKFIELD, WINDSOR, BERKS

Why ONLY Nulacin?

All alkalis, given by mouth, have only a transient effect on gastric acidity. This is probably due to rapid emptying of the stomach. Before Nulacin, an intra-gastric milk and alkali drip through a Ryle's tube was the only effective way to achieve continuous neutralization of stomach contents. The milk protein neutralized hydrochloric acid without stimulating further production. The milk fat helped to inhibit the formation of excess gastric juice. And the antacids

dealt with excess acid. Nulacin brought this benefit to the ambulant patient—and still does.

Only Nulacin is made from whole milk and combines milk protein and milk fat with dextrins, maltose and suitable antacids.

Only Nulacin is prepared in a size, shape and consistency to dissolve slowly in the mouth and produce a continuous milk-alkali drip in the stomach.

information about a new drug

Merrell-National (Laboratories) Ltd. is pleased to announce that **CLOMID (clomiphene citrate)** is now commercially available in the United Kingdom. This drug, synthesised by Merrell and extensively investigated both in this country and abroad has been shown to be effective in inducing ovulation in some anovulatory women. Its sole indication is to induce ovulation in such patients who desire to become pregnant.

Clomid is not universally effective and the degree of success is very closely related to the proper selection of the patient. In a high percentage of cases proper selection can only be made after extensive clinical and laboratory studies have been performed. Clomid is, on the other hand, a highly potent drug and its use (especially its excessive use), may be attended by significant side effects.

For the above reasons we believe it prudent that Clomid should be prescribed only by those who, in addition to having special experience in infertility problems, also have extensive laboratory facilities available to them. Under these circumstances beneficial results will be increased and adverse effects reduced.

We shall be pleased to provide additional information about Clomid on request.

A doctor's life with a difference can be found in the ROYAL ARMY MEDICAL CORPS

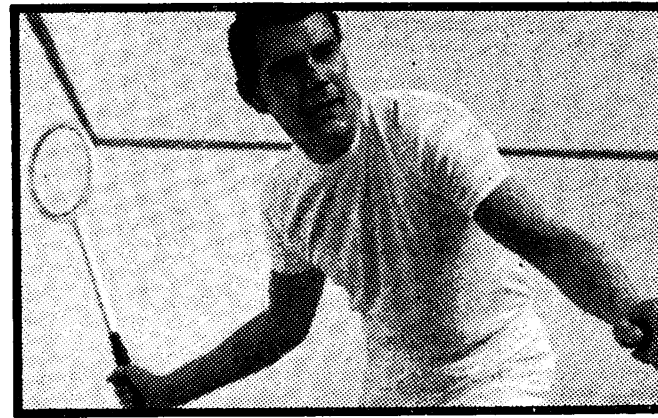

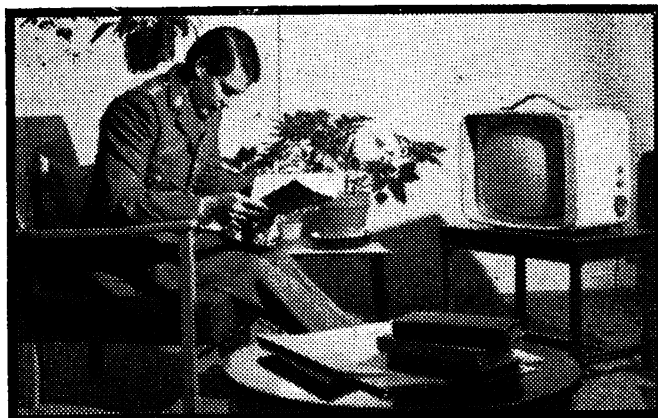

Excellent opportunities are provided for general practice under good conditions of service. The professional opportunities are very wide and varied and include caring for the wives and children of soldiers.

All aspects of medical care—preventive medicine, general and hospital practice are closely integrated. Surgeries are organised by groups and groups are supported by hospitals so that Medical Officers are able to follow up those of their patients admitted to

hospital. These modern surgeries have every facility. Good equipment, trained staff, and a locum provided for six weeks' annual leave. Post-graduate training is given.

For the married man it matters greatly how his wife feels about the Service. The community spirit of Army life, especially overseas, embraces an Officer's family as much as himself. Such extra emoluments as Marriage Allowance, Education Allowance, Disturbance

Allowance, and Local Overseas Allowance, show the importance attached by the Army to helping the Officer with a family. Most married Medical Officers get a furnished house at low rental.

Pay for a married Captain (the rank on entry) is over £2000. There are increases every two years and on promotion. Promotion to Major can normally be expected after 5 years and to Lieut-Colonel after 13 years (or shorter, where an antedate is given for experience in

hospitals and general practice). Commissions granted may be permanent or Short Service. A Short Service commission earns a tax-free gratuity of £3000 for 5 years' service, £1500 for 3 years. Regular commissions are pensionable on the normal basis.

Anaphylline

(THEOPHYLLINE-NIACINAMIDE)

a new theophylline complex for more
effective maintenance therapy in mild to moderate cases of

BRONCHITIS-ASTHMA-EMPHYSEMA

Clinical evidence confirms that this new theophylline-niacinamide complex achieves rapid therapeutic blood levels for faster dilation of the bronchioles and substantial improvement in vital capacity in most cases of chronic bronchitis, asthma and emphysema.

Significant Treatment Advantages:

The unique Anaphylline complex is a loose bonding of theophylline and niacinamide which affords a soluble theophylline through all pH ranges. No more ionization of theophylline salts with precipitation of the theophylline in the acid of the stomach. Now direct immediate absorption of the theophylline complex for faster, higher and longer blood levels.

* MORE RAPID ABSORPTION FOR QUICKER PATIENT RESPONSE

Evidence from clinical trials indicates that Anaphylline achieves therapeutic blood levels faster than theophylline salts and within 15 minutes of oral administration.

* MORE PROLONGED BLOOD LEVELS FOR SUSTAINED RELIEF

Rapid, initial blood levels achieved are followed by a steady, sustained rise reaching peak achievement at 60 minutes, with gradual, but uniform decline thereafter.

* SUPERIOR PATIENT TOLERANCE

Achievement of these blood levels is not accompanied by any increase in the side-effects normally associated with theophylline treatment.

INDICATIONS

For use as a bronchodilator to control the symptoms of chronic bronchitis, chronic asthma, emphysema and other pulmonary disorders.

DOSAGE:

Adults 1 to 2 tablets to be taken 3 or 4 times daily, preferably after meals. (Children 8-12 yrs., half to 1 tablet.)

FORMULA

Theophylline-Niacinamide complex containing 100 mg. theophylline and 150 mg. niacinamide in single tablet form.

CORTROPHIN-ZN LONG ACTING ACTH

***Incorporating a NEW Phosphate Modification
for maximum duration of effect
with greatest ease of administration***

It is a fine aqueous suspension with an even distribution of particles to ensure even dosage.

The suspension is free-running at room temperature and can easily be injected through the finest needles.

The period of effective adrenal stimulation is prolonged by adsorbing the ACTH on to colloidal zinc hydroxide—
now with the addition of colloidal zinc phosphate. The duration of activity bears a direct relationship to dosage, the higher doses of Cortrophin-ZN producing adrenocortical activity into the third day.

- Indications**
- (1) Rheumatoid arthritis.
 - (2) Bronchial asthma.
 - (3) Other conditions requiring an anti-inflammatory effect.
 - (4) To facilitate withdrawal of corticosteroid therapy.

Dosage Initially 40-80 i.u. daily, subcutaneously or intramuscularly. When symptoms are controlled frequency of injection should be reduced to twice or three times weekly, according to individual requirements.

Packing Vials of 5 ml. containing either 20 i.u. or 40 i.u. per ml. Cortrophin-ZN complies with the specifications for Corticotrophin Zinc Hydroxide Injection B.P.

CONSIDER NOW

summer-long protection against HAY FEVER with

D-VAC Pollens 3 dose course

regd.

D-VAC Pollens, Bencard emulsified 'depot' vaccine for 'classical' hay fever and pollen asthma, is the latest development in desensitising vaccines. The course of three carefully graded injections—fewer than for any other available—has been shown to be at least as effective as the much longer course with aqueous vaccine. Injection from a specially designed syringe ensures the controlled release of active emulsion through surrounding 'shield' emulsion. Local or systemic reactions are therefore rare provided that the recommended technique of administration is employed under antihistamine cover.

D-VAC Pollens is prepared from extracts of 12 varieties of common grass pollens (Bencard group B2), which are responsible for over 80% of cases of 'classical' hay fever and pollen asthma. Two alternative courses are available:

Primary Course (three injections containing 250, 750 and 3,500 Noon units respectively): designed for patients who have not received pollen vaccine treatment in the last five years or whose seasonal symptoms are severe, and for children (aged 8-14 years).

Advanced Course (three injections containing 750, 3,500 and 7,500 Noon units respec-

tively): designed for patients aged 15 years and over who have had pollen vaccine treatment in the last five years and whose symptoms are not very severe.

(Patients suffering from atopic eczema should first be referred to an allergy clinic.)

The 3 injections are administered pre-seasonally at intervals of exactly 4 weeks, the first dose given in February or early March. Full technical details (administration, precautions, possible reactions, etc.) are supplied with each dose, or on request.

TO BE SURE

of obtaining D-VAC Pollens, it is advisable to prescribe and order before 31st December: no order can be accepted after 20th January.

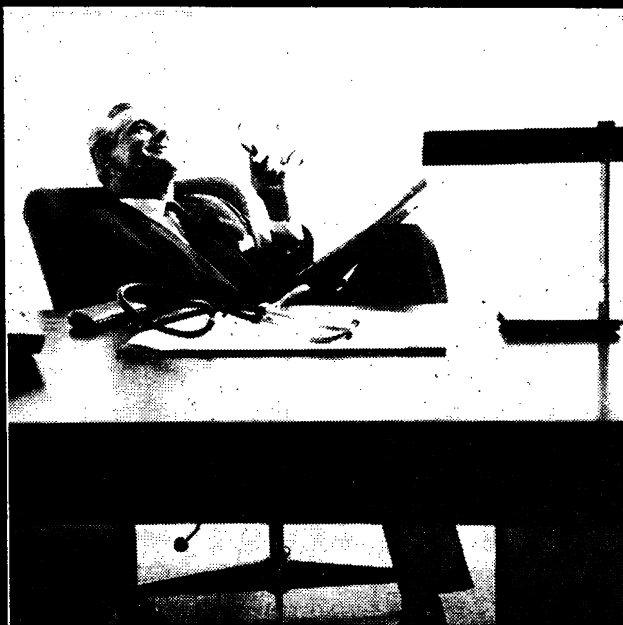

Prescriptions and orders, for D-VAC Pollens 'Primary' or 'Advanced', should state the exact date (between 13th February and 4th March) on which the first dose is to be injected. The first dose will be despatched to arrive by this date. (D-VAC Pollens is not available outside the U.K.)

Fucidin Ointment has an unusually high degree of effectiveness in the treatment of dermatological infections. Application of Fucidin Ointment has resulted, in the great majority of cases, in a notably rapid control of infection and a marked improvement in the rate of healing. The unique penetration of Fucidin Ointment can eliminate the need for incision and/or systemic antibiotics, even in treating deep-seated abscesses and paronychias. Fucidin Ointment alone can thus be expected to provide complete treatment in the majority of skin infections.

Abstracts from Clinical Reports

Pruritic Dermatoses

'The results of the present study demonstrate that dimethpyrindene possesses a high order of clinical efficacy as an antipruritic agent in allergic and pruritic dermatoses. As to rapidity of action and duration of effect, it is equal to most, if not all, potent antihistamines currently available.'

Current Therapeutic Research, Vol. 4, No. 4, April 1962.

Paediatric Use

'The results of dimethpyrindene therapy in children were particularly gratifying, in view of the type of condition involved (atopic dermatitis, urticaria and perianal pruritus). An antihistamine that is both effective and safe in paediatric use is a welcome boon to mothers as well as a source of satisfaction to the children.'

Current Therapeutic Research, Vol. 4, No. 4, April 1962.

Comparative Efficacy

'In a clinical study of 105 patients with urticaria, the drug proved at least as effective as the phenothiazine derivative, trimeprazine, and was remarkably free of side effects, particularly the more serious ones occasionally encountered with phenothiazine agents. These factors suggest that dimethindene more closely approximates the criteria of an ideal agent for the symptomatic control of pruritus. Of the 105 patients 79% responded to the compound.'

BRITISH MEDICAL ASSOCIATION

ASSISTANT SECRETARY

The Council of the British Medical Association invites applications from registered medical practitioners for the post of Assistant Secretary. Preferential consideration will be given to candidates not over the age of 40.

The salary will be £3,200, rising by five annual increments to a maximum of £4,200 per annum. The Association's Superannuation Scheme will apply on substantive appointment.

The appointment will be for a probationary period of six months in the first instance, and thereafter may be terminated by six months' notice on either side.

Applications, giving details of qualifications and experience, and accompanied by the names of three persons to whom reference may be made, should be addressed to the Secretary of the Association, B.M.A. House, Tavistock Square, London W.C.1, and must be received not later than November 25, 1966.

BRITISH MEDICAL ASSOCIATION

AN IMPORTANT APPOINTMENT

Candidates are sought for an important new post to be created for the development of the educational activities of the Association with special reference to the use of audio-visual aids.

The post calls for enterprise, vision and judgment. Candidates should preferably be medically qualified. A good knowledge of higher education and audio-visual techniques will be an advantage. Qualities, however, are of greater importance than qualifications as such, and a lack of degrees and diplomas will not disqualify a candidate with good experience, knowledge and understanding of the role and problems of the medical profession in the modern world.

The job is both a creative and administrative one which involves the rationalization of the existing B.M.A. film and tape libraries and the subsequent planning, initiation, expansion and promotion of a programme of continuing education for medical practitioners and personnel, and health education of the public, using modern educational and allied audio-visual techniques. It offers very exceptional scope to the right person aged from 30 to 55.

Remuneration

An initial three-year contract is envisaged, and the salary will be commensurate with the qualities and qualifications of the successful candidate within the range £2,500 to £5,000 per annum.

Applications, accompanied by the names of three referees, should be submitted by November 21, 1966, to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London W.C.1.

To obtain further details intending applicants are advised whenever possible to make an appointment to visit B.M.A. House. Telephone No.: Euston 4499.

THE INCORPORATED LIVERPOOL SCHOOL OF TROPICAL MEDICINE Department of Parasitology

A RESEARCH ASSISTANT is required to collaborate with the head of the department of parasitology in the development of new methods for the evaluation of compounds active against parasitic diseases. This is an original and challenging programme that will provide full scope for a young research worker with imagination and energy who wishes to prepare for a higher postgraduate qualification.

Candidates should hold an honours degree in the natural sciences, and preference will be given to those with particular interest in zoology, biochemistry or pharmacy. Basic salary will be on the scale £850 to £1,150 with placing according to qualifications and experience, and the appointee will be entitled to participate in the F.S.S.U. The appointment is for a period of four years subject to a probationary period of six months.

Further particulars may be obtained from the Dean, Liverpool School of Tropical Medicine, Pembroke Place, Liverpool 3, with whom applications (three copies) should be lodged by December 15, 1966. (H.9534)

THE INCORPORATED LIVERPOOL SCHOOL OF TROPICAL MEDICINE Department of Parasitology

The reorganization of the department of parasitology has provided vacancies for TWO JUNIOR LECTURERS (Technical Assistance)

who may be medical or non-medical science graduates.

One lecturer will be attached to the sub-department of entomology and on to the department of parasitology. The purpose of the appointments is to provide interesting and challenging posts for candidates who either have prior experience of teaching or research in tropical countries or are desirous of obtaining such experience. They must therefore be willing to be seconded to suitable teaching or research centres overseas for a major portion of their appointment when vacancies occur. Even during secondment they will be on permanent appointment to the department of parasitology (for the duration of their appointment, which is five years). They will also be expected to participate in teaching and in current research projects during any interim periods that they may spend in Liverpool.

Salaries will be within the range for lecturers (Grade II) on the university scale, and placing will depend upon individual qualifications and experience. Medical graduates must hold a qualification registrable in the United Kingdom and have at least two years' postgraduate clinical experience.

Further particulars may be obtained from the Dean, Liverpool School of Tropical Medicine, Pembroke Place, Liverpool 3, with whom applications (8 copies) should be lodged by January 31, 1967. (H.9536)

Male, 51, (H.L.). First seen after the sudden development of an unsteady gait and sensations of numbness in the right arm and leg and around the mouth. Right facial palsy was present. Some ataxia of right arm and hand. The patient was placed on Cyclospasmol 400 mg q.d.s. At the next neurological examination, six weeks later, he was virtually normal.

2 H.L. After (4.5 seconds)

The angiogram after treatment shows a striking change. Notice the rather heavy concentration of vessels along the midline with a fairly pronounced accumulation of vessels just above the middle cerebral territory. The vessels are of much wider calibre, generally, than those seen in the control film.

Cyclospasmol significantly improved cerebral circulation in a trial using retrograde brachial cerebral angiography. *Kuhn, 1966.*

When the presence of slough delays healing...

A CASE FOR ASERBINE

Crush injury of right foot sustained in a road accident. There was a severe compound dislocation of the mid-tarsal joint. The wound was treated by primary suture but broke down revealing thick, tough yellow and green sloughs and one large black necrotic area.

The first picture shows the result of one month's treatment with Eusol and Lotion

Rubra. They produced little change. The second picture shows the result of five days' treatment with Aserbine. The desloughing effect is dramatic. Aserbine Solution was used on packs which were re-soaked every four hours. Subsequent healing was rapid and skin-grafting took place only two weeks after starting treatment with Aserbine.

... in varicose ulcers, pressure sores, burns, trophic ulcers, etc.

... experience has shown that ASERBINE is a true desloughing agent which does not affect living tissue.

Presentation

Aserbine is available as a cream (100 G. jars) and as a solution (500 ml. bottles).

Method of Application

Aserbine Cream should be applied once or twice daily.

Aserbine Solution should be applied as a wet dressing and it is important to keep the dressing moist.

Active Ingredients

Malic Acid Ester of propylene glycol
Malic Acid
Benzoic Acid
Salicylic Acid

COMMERCIAL APPOINTMENTS

CLINICAL RESEARCH

Registered medical practitioners, aged about 27 to 35, are invited to apply for a post in the Medical Department, which is located in the company's Head Office, near Maidenhead. The Department is mainly comprised of a team of doctors who are actively engaged in clinical research.

Candidates for this post should preferably have had experience in hospital and general practice. Additionally they should have initiative, enthusiasm and the ability and interests that enable them to converse with consultants and other senior members of the medical profession and research staff with equal ease.

The responsibilities will be mainly directed towards clinical research in the U.K., but will also include acting in an advisory capacity on the medical aspects of promotion and matters of general medical importance. This will entail maintaining an active interest in current medical practice. In this context facilities are offered for attending suitable conferences.

General conditions of employment are good, and include a non-contributory pension scheme, free life assurance, company car, etc. Assistance will be given towards expenses incurred in moving to this area.

Please write, giving all relevant details, to: Personnel Officer, John Wyeth and Brother Limited, Huntercombe Lane South, Taplow, Maidenhead, Berks. (10458)

MEDICAL ADVISER

Applications are invited from medical graduates of British Universities, aged about 30 years, for the post of Assistant to the Head of the Clinical Investigation Department of the vigorous British subsidiary of a large European Pharmaceutical Company. The duties of the post comprise the compilation of data for submission to the Dunlop Committee and the initiation and supervision of clinical trials upon drugs developed by the parent company. Possession of a higher medical qualification or previous experience of the Pharmaceutical industry are not necessary for this post, but it is desirable that applicants should have had good all-round experience in general medicine at Registrar level. Salary and prospects are good. There is a non-contributory pension and life insurance scheme and a company car will be provided. Applicants for the post should supply brief personal details to Box CA262, B.M.J.

Merck Sharpe & Dohme Limited

Because of continuing company expansion the Medical Division requires an additional registered Medical Practitioner, male or female, for a post at their head office in Hoddesdon, Hertfordshire (18 miles north of London).

It is this company's policy to provide a comprehensive and detailed information service to the medical profession, and in consequence the person appointed, together with his or her colleagues, will be concerned in

1. dealing with medical problems—some urgent and immediate—posed by doctors;
2. participating in medical representative training and thus helping to maintain high quality and informed company representation;
3. advising on the medical aspects of technical and promotional literature.

This is a permanent and progressive post with a company having an impressive background in therapeutic medicine. The conditions of employment are attractive and include a contributory pension scheme. The starting salary will be by arrangement and according to experience and qualifications. Applications, which will be treated in the strictest confidence, should be addressed to:

The Personnel Manager (Medical), Merck Sharp & Dohme Limited, Hoddesdon, Herts. (10451)

Major International Pharmaceutical Group desire to appoint a Medical Director

He will be responsible for medical policy within the Company, reporting directly to the Managing Director. *His duties will cover:*

- 1 Collaboration with International Management in product development.
- 2 The establishment and control of clinical trials in the United Kingdom.
- 3 Medical direction of a United Kingdom hospital sales force to establish a major new product.

This is a senior appointment within the International Organisation of the Company. The applicant should have proven experience with a major pharmaceutical group in the control and co-ordination of clinical trials at senior consultant level. This position offers considerable individual responsibility accompanied by attractive salary and other fringe benefits.

Applications, with full details of previous experience, to be sent to Box CA.395, B.M.J.

Nulacin and only Nulacin provides intragastric milk-alkali drip therapy for the ambulant patient

“In view of the ineffectiveness of most of the tableted antacids, the milk-alkali tablet (Nulacin) would appear to be the antacid of choice for ambulatory therapy.”

Safe, Simple, Effective

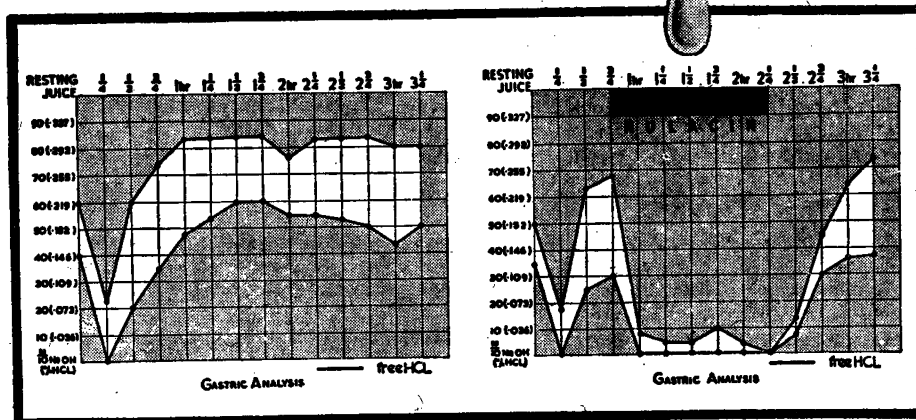

NULACIN TABLETS provide a safe, simple and effective treatment of peptic ulcer.

In treating peptic ulcer a Ryle's tube may be passed through the nose and into the oesophagus and a mixture of milk and antacid allowed to flow continuously over the affected area. This form of therapy can only be employed in those patients who are in bed and for the ambulant patient Nulacin tablets are preferable. Nulacin tablets are prepared from whole milk combined with dextrans and maltose, together with the trisilicate, oxide and carbonate of magnesium and calcium carbonate. Nulacin tablets when allowed to dissolve slowly in the mouth provide milk-alkali drip therapy. In fact, Nulacin tablets have revolutionized the treatment of peptic ulcer.
