

# New First-aid and transit dressing for Burns

—even unskilled helpers  
can apply it in seconds

The Roehampton burns dressing, made from Pritex polyurethane foam, reduces risk to the patient during the critical pre-hospital period. It also provides a logical preliminary to the modern exposure treatment. It is so simple and effective to apply that even unskilled helpers can attend to a casualty—quickly and safely. It can be applied in seconds without causing unnecessary pain and with a minimal risk of adherence. It provides good protection against trauma and reduces the risk of infection.

This Roehampton dressing can be removed **in seconds**. It will often save the patient having to be given large doses of drugs, or even a general anaesthetic.

**In the event of multiple casualties**, such as might be caused by large scale explosions or fires, the Roehampton burns dressing has many advantages.

☐ It makes a light, compact package that is easy to transport. ☐ No special care is needed to keep it in perfect condition. ☐ It remains sterile until the package is broken open. ☐ **In all circumstances, it gives the patient the best possible means of protection from further damage while on the way to hospital.**

# Alavac

## for 1967 is available now

Alavac is the name for the Bencard range of adsorbed desensitising vaccines. Alavac provides a simple, effective and safe treatment for most common allergies. For many patients this treatment can be started now.

**Simple** A course of Alavac needs only 7-9 injections based on the clinical severity of symptoms. The three-vial Alavac treatment set includes sterile disposable syringes with attached needles, plus full instructions for administration.

**Effective** Over 80% of patients have been shown to respond well to the adsorbed type of desensitising vaccine. For these patients such therapy can bring long-lasting benefit and halt the deterioration that might otherwise occur with continued use of mere symptomatic treatment.

**Safe** Alavac is carefully formulated so that once injected, the allergens are released slowly ensuring a gradual and safe dispersal in the body. Consequently, effective doses are attainable in even the most sensitive patient.

### How to prescribe Alavac

There are three varieties of Alavac:

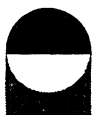

**Alavac-S** is individually formulated to the patient's particular allergic condition, and can be prepared from any one or more of a wide selection of allergen extracts.\* Specialists will appreciate that the allergens used correspond exactly with those available in Bencard testing solutions.

**Alavac-P** is a stock grass pollen vaccine for classical hay fever and pollen asthma. It is best administered pre-seasonally, starting in mid-March at the latest.

**Alavac-D** is a stock house dust vaccine for non-seasonal asthma and perennial rhinitis. It may be given at any time of the year but may have an added advantage if administered immediately to patients whose symptoms predominate during the winter months.

Chronic bronchitis **PENBRITIN** helps him put up a better fight

By swiftly reducing both the quantity and purulence of the sputum, routine dosage Penbritin brings a rapid clinical response in the majority of patients: moreover clinical trials have shown these benefits to be more marked than those observed in patients on tetracycline therapy. The success of this regimen (250mg. four times daily for one week or more) can be attributed to Penbritin's higher activity against the causative organisms, *H. influenzae* and pneumococci.

In addition, severely disabled patients, including those with extensive bronchiectasis and cases whose sputum is winter-long purulent despite other antibiotic therapy, may gain unprecedented relief from a short course of high dosage Penbritin. In published trials on this regimen (1 gram four times daily for one week or more) infection was cleared in the majority of patients, and subsequent freedom from exacerbation for up to 16 weeks was reported.

**2 H.L. After (4.5 seconds)**

The angiogram after treatment shows a striking change. Notice the rather heavy concentration of vessels along the midline with a fairly pronounced accumulation of vessels just above the middle cerebral territory. The vessels are of much wider calibre, generally, than those seen in the control film.

## Psoriasis ... rapid response to Alphosyl

... even in previously intractable cases. A patient of 48 who had a generalised psoriasis for 20 years was essentially clear in six weeks.<sup>2</sup> A girl of 10 with a strong familial history of psoriasis, cleared almost completely after three weeks' application of Alphosyl Cream.<sup>2</sup> These are just two typical cases from the extensive clinical records underlining Alphosyl's outstanding effectiveness in bringing psoriasis under control.

**New Alphosyl lubricating cream.** A new water-in-oil dosage form, Alphosyl Lubricating Cream is particularly significant in the treatment of the dry, extremely scaly psoriatic lesion confined to the small site and the intertriginous area. Alphosyl cream is especially helpful in clearing psoriatic plaques exposed to constant friction. By enhancing lubrication of the skin folds, it serves to lessen irritation and facilitate healing. Clearing is prompt, even in previously resistant cases. The effectiveness of Alphosyl in this form is attributable in large measure to its unique cream base. This consists of a combination of saturated and unsaturated free fatty acids, naturally occurring triglycerides and esters that resemble the lipid constituents of normal healthy skin. The vehicle also contains hydrophylic-lipophilic bipolar substances which

enhance the moisture uptake and retention of the amphoteric proteins of the stratum corneum. Significantly, it has been shown that squalene, one of the components of the base, is most effective in dissolving a cement substance in psoriatic scales.

**Formula:** Allantoin 2%+90% alcoholic extract of coal-tar (5=1) 5% in a vanishing type cream base or a smooth, non-greasy lotion base.

Three parts of 2-Diethylaminoethyl-a-phenylbutyrate Citrate producing the same effect as 5 parts of ephedrine. It acts more rapidly than ephedrine, reaches maximum effect somewhat later and falls away at a slightly slower rate. With a mixture of the substances the curve of bronchial dilatation showed that the effect produced was considerably greater than when double the quantity of each substance was administered separately. 4 mg OF THE MIXED SUBSTANCES (CONTAINING 2 mg OF EPHEDRINE) has the BRON-

a new theophylline complex for more

## BRONCHITIS-ASTHMA-EMPHYSEMA

Clinical evidence confirms that this new theophylline-niacinamide complex achieves rapid therapeutic blood levels for faster dilation of the bronchioles and substantial improvement in vital capacity in most cases of chronic bronchitis, asthma and emphysema.

### Significant Treatment Advantages:

The unique Anaphylline complex is a loose bonding of theophylline and niacinamide which affords a soluble theophylline through all pH ranges. No more ionization of theophylline salts with precipitation of the theophylline in the acid of the stomach. Now direct immediate absorption of the theophylline complex for faster, higher and longer blood levels.

#### \* MORE RAPID ABSORPTION FOR QUICKER PATIENT RESPONSE

Evidence from clinical trials indicates that Anaphylline achieves therapeutic blood levels faster than theophylline salts and within 15 minutes of oral administration.

#### \* MORE PROLONGED BLOOD LEVELS FOR SUSTAINED RELIEF

Rapid, initial blood levels achieved are followed by a steady, sustained rise reaching peak achievement at 60 minutes, with gradual, but uniform decline thereafter.

#### \* SUPERIOR PATIENT TOLERANCE

Achievement of these blood levels is not accompanied by any increase in the side-effects normally associated with theophylline treatment.

#### INDICATIONS

For use as a bronchodilator to control the symptoms of chronic bronchitis, chronic asthma, emphysema and other pulmonary disorders.

#### DOSAGE:

Adults 1 to 2 tablets to be taken 3 or 4 times daily, preferably after meals. (Children 6-12 yrs., half to 1 tablet.)

## Complan —the complete meal in a cup

For patients who cannot tolerate solid foods in illness and convalescence, Complan, prepared as a pleasant drink, provides all the nourishment they need. Complan contains every essential constituent of the human diet, balanced for complete nutrition and blended for easy assimilation. Preparing Complan is so simple; it takes only a few minutes. This is why, during winter, Complan is most useful in providing excellent nourishment for the elderly—especially those living alone. As it is a food, Complan is not prescribable on EC.10. However, as the cost is only 5/- (recommended price) per 1 lb carton you can recommend Complan without hesitation—as a complete planned diet or as a nutritious dietary supplement. What else that is so good costs so little?

**Glaxo  
brief**

In athlete's foot  
**Tinaderm** (tolnaftate)  
gets to work deep down  
without desquamation

"Besides its fungicidal potency and therapeutic effectiveness tolinaftate has the additional advantage of being able to penetrate the infected skin to reach the offending organism."\*

One of the major advantages of tolinaftate is that it is not a keratolytic agent. It acts by penetrating the skin without desquamation and without irritation. Tinaderm (the Glaxo name for tolinaftate) brings new benefits, a new measure of success to the treatment of *tinea pedis* (athlete's foot), *tinea corporis*, *tinea cruris* and *tinea manuum*. Applied twice daily Tinaderm gives swift relief from burning and itching, often within 48 hours, followed by rapid clearing of lesions in as little as two to three weeks, regardless of the duration of the infection. Patient acceptability is high, for Tinaderm is gentle and soothing; it does not usually sting or irritate even when applied to raw areas of the skin or when acute inflammation is present. Tinaderm is most unlikely to cause sensitisation. There is no staining of the skin or clothing. Tinaderm Powder is particularly useful where perspiration is a problem or when maceration is present. Tinaderm will appeal to patients because of its rapid relief-giving properties, cosmetic acceptability and swift control of *tinea* infections.

## Long-term management of the elderly hypertensive— with safe potassium supplement

In long-term diuretic/antihypertensive treatment the dangers of gastric irritation or small bowel ulceration following potassium supplements are well known. One way of avoiding these dangers is to ensure that the potassium supplement is released very slowly in the small intestine without reaching high concentrations at any time. Glaxo Neo-NaClex-K, the two-tier tablet, is designed to do just this. Soon after the tablet is swallowed the white tier provides the diuretic/antihypertensive dose (2.5 mg bendrofluazide) for smooth, sustained reduction of blood pressure. The second (pink) tier then releases the potassium supplement (630 mg potassium chloride) very slowly so that no great concentration of potassium is reached at one time. The smooth action of bendrofluazide and the slow release of potassium chloride of Neo-NaClex-K makes long-term management of the hypertensive, especially the elderly hypertensive, safer and easier.

## Betnovate widens the scope of topical steroid therapy

Betnovate is effective, often dramatically, in all steroid-responsive dermatoses. This is not only because of the superiority of betamethasone 17-valerate (proved in the largest dermatological trial ever reported and confirmed in millions of patients in hospital and general practice) but also because Betnovate is supplied in the largest range of topical steroid preparations ever made available in this country. This means not only that prescribing is simpler but also that the scope of Betnovate treatment is wider. Because more Betnovate is used than ever before, the most successful topical steroid therapy costs less than ever.

## Streptococcal throat infections? Oral penicillin (Crystapen G) of course—

"Penicillin is the most effective agent for the prevention and treatment of group A (beta-haemolytic) streptococcal infections. Despite widespread use of this drug for two decades, there has been no documented evidence of naturally occurring penicillin-resistant strains or of a significant trend towards the emergence of group A strains less susceptible to penicillin than in previous years."\* The article in which this statement was made also points out that penicillin is superior to tetracyclines in both prevention and treatment of streptococcal infections. Glaxo Crystapen introduced 20 years ago (and continuously developed to meet modern needs) is still the first choice in penicillin therapy. No other penicillin preparations—injections, tablets or syrup—are better proved or more acceptable to patient and doctor. Yet the price of Crystapen has come down again and again, and at present the basic NHS Cost is at its lowest (25 Crystapen G Tablets 125 mg for 2/10½). Crystapen is the penicillin for today.

# Effective at very low dosage, extremely well tolerated, Metrulen-M greatly reduces the cost of progestational therapy

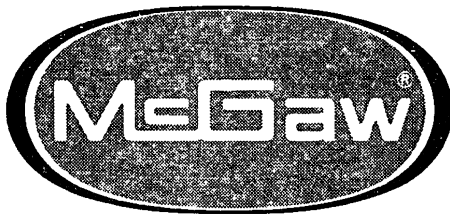

'The most significant advantage of this compound [ethynodiol diacetate 1 mg. with mestranol 0.1 mg.] is that with increased effectiveness at lower dosage, there has been appreciable lowering of side effects.'

(1964) *Fertility and Sterility*, 15, 75

By using Metrulen-M you can considerably reduce the incidence of side effects often experienced in progestational therapy. Moreover, since Metrulen-M is effective at low dosage, the cost of treatment is greatly reduced.

## ANTIBIOTICS AND THE INTESTINAL FLORA

Treatment with broad spectrum antibiotics suppresses the normal flora, which may be replaced by abnormal resistant organisms causing diarrhoea.

This change can be prevented or reversed by the implantation of *Lactobacillus acidophilus* which has been rendered antibiotic-resistant, and is thus able to multiply freely under these abnormal conditions. The products of growth of the organism are inimical to that of many other bacteria<sup>1,2</sup> and thus contribute to its rapid preponderance over other species.

Oral treatment with antibiotic-resistant *L. acidophilus* in the form of ENPAC has been shown to eliminate *Candida* from the faeces of infants with antibiotic-induced diarrhoea, with relief of symptoms succeeded by rapid gain in weight<sup>3,4</sup> and greatly to reduce the numbers of staphylococci in the faeces of patients treated with tetracyclines.<sup>5</sup>

# MEDICAL OFFICERS

The Anglo American Corporation Group Medical Service wishes to strengthen its staff of medical officers in South Africa. Its several hospitals are outstandingly well-equipped and serve many thousands of African employees.

In addition to the normal work common to all hospitals for men, the Group's medical officers supervise the health, housing, nutrition and general welfare of the employees, and also assist in maintaining the high standards of public health on the mines. They can further expect to have opportunities of gaining invaluable experience in traumatic surgery.

A starting salary in the range £2,700—£3,250 p.a. is offered. Income Tax is about half that paid in U.K., and commodities in general cost noticeably less. A spacious detached house is provided at a rental of approximately £5 a month. There are excellent pension and health schemes. In all centres there are facilities for at least the popular games including golf and tennis—and time to play them. Help in the house is readily obtainable and moderately inexpensive. The South African climate is acknowledged to be one of the most congenial and healthy in the world.

Air fares to South Africa for employees and their families are paid for *in toto* by the Group and generous assistance is given towards the cost of moving baggage and possessions.

The Anglo American Corporation with its associated groups, including De Beers, forms the largest single concern in South Africa. It has interests outside South Africa too, and has a reputation for progressive policies in regard to the welfare of its African and European employees.

Applications, giving full details of medical career to date, age, marital status and qualifications, together with the names of two referees, should be sent not later than 19th November to:

In 1963, the first intake of students in the clinical and laboratory courses, including pathology and bacteriology, began in June 1965. A new teaching hospital and medical school have been planned adjacent to the college; the first section of the new school buildings has already come into use.

The clinical salary scales in force at the college are as follows:

Professors: £4,200 by £150 to £5,400.

Senior Lecturers: £2,820 by £150 to £4,020.

Lecturers Grade I: £2,500 by £110 to £2,940.

Lecturers Grade II: £1,840 by £110 to £2,390.

(Entry point according to qualifications and experience).

Family passages and allowance for transport of effects on appointment. Installation grant of £100 for persons recruited from outside Africa. Travel assistance for appointee for triennial (Prof. senior, biennial) visit overseas and for appointee and family for six-yearly sabbatical leave and on retirement or resignation after five years' service. Superannuation and medical aid schemes. Unfurnished college accommodation at rent of 15% of salary if desired.

Detailed applications (six copies) giving full personal particulars including full names, place and date of birth, etc., qualifications, experience and publications, and naming three referees should be sent to the Registrar, University College of Rhodesia, P. Bag 167H Salisbury, Rhodesia, and by other applicants by December 15, 1966, to the Registrar, University of Birmingham, P.O. Box 363, Birmingham 15, England, from either of whom further particulars may be obtained. (10853)

# Medical Service OVERSEAS helps DEVELOPMENT

*The developing countries overseas are in urgent need of doctors. A break from normal routine is offered, together with the opportunity to see something of the world and to gain valuable and interesting experience. These appointments carry attractive salaries, normally with an overseas allowance and a gratuity on completion of contract. There are also educational allowances for children and free family passages. Accommodation is provided free, or at a low rental, and income tax is usually low. In most cases superannuation rights can be preserved or maintained. Here are some examples of posts available:*

Acting directly at the site of pain in muscle, *Intralgin* Gel quickly relieves muscular aches and pains. Vigorous massage is not needed with *Intralgin* Gel—unlike traditional rubs which rely on erythema or counter-irritation. After penetrating the skin the constituents—salicylamide and benzocaine—concentrate in underlying tissue to give rapid relief. Whether pain results from strain, injury, fibrositis, lumbago or non-articular rheumatism, *Intralgin* Gel quickly gets stiff and aching muscles back into action.
