What's an **NSPCC**
man doing with an
old wardrobe!

Just doing his job! *Helping a child.* Children can suffer if they live in bad conditions. A bit of clothing, a few pieces of furniture may be just what a family needs. And where there's a child in need, there's the *NSPCC* . . . with an old wardrobe, if it will help! The National Society for the Prevention of Cruelty to Children does *MORE* than help cruelly assaulted children. It exists to help children in any and every way possible. In turn, it needs *YOUR* help. Please send a donation now to Room 5P, 1 Riding House Street, London, W.1. Telephone LAngham 8812.

More to overweight than meets the eye?

How many cases of obesity have emotional stress as a major underlying factor? Many authorities hold that in *most* cases, overeating is rooted in anxiety, boredom, frustration or similar emotional tensions^{1,2,3,4}. Merely curbing the appetite in these cases is unlikely to be of more than limited value^{1,2}—treatment of the obese patient must also compensate for the solace formerly obtained from eating. *Durophet-M* provides this treatment.

Durophet-M contains two constituents—a calmative, methaqualone, to counter underlying tensions, and a highly effective appetite depressant, laevo- and dextro-amphetamine, ratio 1:3. *Durophet-M* provides better treatment for the compulsive overeater than simple appetite depressants because it both controls the appetite *and* combats the emotional factors present in nearly all cases of obesity^{1,2}.

With a once-daily dosage of only 150 mg. ferrous sulphate, 'Feospan' can produce a rise in haemoglobin level of up to one per cent. or more a day. Low dosage once a day and minimal release of iron in the stomach make side effects unlikely to occur. So it's easy to understand why patients—and their doctors—so seldom abandon 'Feospan' therapy.

Maxolon

Maxolon is an effective anti-emetic against vomiting of central or local origin.

Maxolon may be given orally or by injection.

Maxolon does not have undesirable effects on the Central Nervous System, and gastric and salivary secretions are unaffected.

Indications:

Nausea and vomiting due to:
Gastro-intestinal disorders.

Intolerance to essential drugs.

Malignant disease.

Uraemic conditions.

Post-operative conditions.

Deep X-ray or Cobalt therapy.

N.B. Maxolon is not so effective in vomiting of labyrinthine origin such as travel sickness, vertigo and Ménière's disease.

Formula: Maxolon (approved name metoclopramide) is chemically N-(diethylaminoethyl)-2-methoxy-4-amino-5-chlorobenzamide monohydrochloride. This new compound is in no way similar to existing medicaments in gastro-enterology.

Contra-indications: Although animal tests in several mammalian species have shown no teratogenic effects, Maxolon, like all new drugs, is not recommended during the early weeks of pregnancy.

Adult dosage:

Oral: 1 tablet (10mg.) or two teaspoonfuls (10mg.) of syrup, three times daily.

I.M.: 1-3 ampoules (10-30mg.) daily depending upon the severity of the condition.

I.V.: 1 ampoule (10mg.) when required.

Information on other dosages is available on request from the Company's Medical Department.

Possible side-effects: Constipation may occur in a small percentage of patients. Symptoms of overdose are drowsiness and restlessness of the limbs.

Precaution: As both Maxolon and the phenothiazines may occasionally cause benign transient dystonia, care should be exercised in the event of both drugs being prescribed concurrently.

Triptafen-DA

antidepressant and tranquilliser

combined treatment for depression and anxiety

Two British Trials Confirm the Value of Triptafen-DA in the Treatment of Depression

The first of two new published papers (*Brit. J. Psychiat.*, 1967, **113**, 195) describes a double-blind controlled trial of Triptafen-DA against placebo in the treatment of 129 patients suffering from depressive illness. This trial was undertaken firstly to establish that Triptafen-DA is an effective treatment for depression and secondly because of the Author's conviction that for the best results an antidepressant should be accompanied by an effective tranquilliser to control the anxiety or agitation that "so often form part of a depressive illness and sometimes cause as much difficulty as the depressed mood itself."

After 3 weeks' treatment 79 per cent of patients treated with Triptafen-DA showed moderate to marked improvement, compared with 30 per cent of patients treated with placebo.

The second paper (*Brit. J. Psychiat.*, 1967, **113**, 201) is a retrospective study of depressed patients treated with Triptafen-DA or with amitriptyline alone. The Authors had previously found amitriptyline to be the antidepressant of choice, but since Triptafen-DA became available they had increasingly used it in preference to amitriptyline alone. In order to compare the effectiveness of the two preparations, they had carried out a review of the records of patients treated with amitriptyline alone and those treated with Triptafen-DA. Patients included in the review were all those who had been seen during 1965 on account of depressive illness and treated with one or other of the two preparations. The review confirmed that amitriptyline is a predictable antidepressant in that response usually occurs within the first two weeks of treatment or not at all. There was, however, a highly significant difference in the effectiveness of the two preparations; thus while 45 out of 71 patients treated with amitriptyline alone showed satisfactory improvement, 40 out of 42 treated with Triptafen-DA did so. The response rate for amitriptyline alone, 63.4 per cent, is in agreement with reports from other investigators; the rate for Triptafen-DA, 95.2 per cent, is by any standards exceptionally high.

Indications

**Depression
Anxiety**

**Psychoneurosis
Psychosomatic illness**

A combined antidepressant-tranquillising action, such as that provided by Triptafen-DA, is established as the treatment of first choice in depressive illness and in psychoneurotic conditions such as anxiety states and menopausal disorders associated with anxiety and depression; also for the relief of the withdrawal syndrome in chronic alcoholism. Most psychoneurotic patients encountered in general practice exhibit symptoms of both depression and anxiety or agitation. The same is usually true of patients suffering from depressive illness regarded as endogenous in origin. In the treatment of such patients it has been stated that "if either the tranquilliser or the antidepressant is used alone, the possibility that the opposite symptom will be exacerbated is a definite risk of treatment."

(*Curr. ther. Res.*, 1963, **5**, 310).

Contraindications. Glaucoma; urinary retention; severely-impaired liver function; the concurrent administration of other antidepressant drugs, particularly MAO inhibitors.

Precautions. Triptafen-DA should not be used in conjunction with MAO inhibitors and because of the persistent action of the latter at least 7 days should intervene between their withdrawal and the introduction of Triptafen-DA. Although Triptafen-DA has been shown to be free from teratogenic effects in laboratory animals, it should be used in pregnancy only after consideration of the risks involved in giving any drug to the pregnant patient.

Side effects. Side effects with Triptafen-DA are mild and of the type to be expected of the atropine-like action of amitriptyline (e.g. drowsiness, dizziness or blurred vision, tachycardia and insomnia) or characteristic of the safest of the phenothiazine derivatives (e.g. slight fall in blood pressure, mild tremor or in elevated dosage, Parkinsonian symptoms). In most cases these side effects disappear on continued therapy or reduction of the dosage. Idiosyncratic side effects (e.g. pruritus, nausea diarrhoea and indigestion) have also been reported on rare occasions.

Dosage. In most cases a dose of one Triptafen-DA Tablet or two teaspoonfuls (10 ml) of Triptafen-DA Suspension 3 times a day is recommended. If necessary a fourth similar dose may be prescribed at night.

Presentation. Triptafen-DA Tablets each contain amitriptyline hydrochloride BP 25 mg and perphenazine BP 2 mg; they are available in bottles of 50 and 500. The basic NHS cost of treatment with Triptafen-DA is 4/6d per week. Triptafen-DA Suspension contains 37.5 mg amitriptyline embonate (equivalent to 25 mg amitriptyline hydrochloride BP) and 2 mg perphenazine BP in each 10 ml. It is available in bottles of 142 ml (5 fl oz) and 500 ml. Basic NHS cost for a bottle of 142 ml suspension is 7/6d.

a case for STELAZINE

Conversion hysteria as an adolescent phase

The following case narrative is one of a series prepared by a consultant psychiatrist, based on actual patient records.

This is the case of a highly intelligent and physically attractive eighteen-year-old girl who presented a typical background of emotional deprivation during childhood and early adolescence. Her mother, a conceited, self-centred woman, had never shown the slightest affection for her daughter, and the father, although a kindly man, admitted that he had never been able to understand her or establish any sort of bond between them.

Intellectually somewhat below average, the father had found his son easier to get on with. They went fishing, and watched football, while his daughter had studied 'O' level Greek in the solitude of her room.

Frustrated in her emotional relationships at home, she attached herself from an early age to people outside the family. Consequently, no one was surprised when she fell in love with the Classics master. Indeed, no one at home was interested. Matters became more complicated, however, when he fell in love with her.

As so often happens, it soon became

clear that Euripides was all they really had in common. The master tried gently to detach himself from what was increasingly becoming an embarrassing association. Reason and persuasion proving equally unsuccessful, he resorted to sterner measures and refused to see her.

She responded to this move with fainting fits, and hysterical telephone calls. Also abdominal pain.

She lost her appendix, was thoroughly examined by the gynaecologist and cleared for genito-urinary infection by the urologist, before her life story finally revealed itself. Then, sympathetic under-

standing, plus 'Stelazine', began to show results.

The Classics master has wisely left the district, the psychiatrist is gradually persuading his patient to keep her father-figure emotions more sensibly in hand, and she's stopped complaining about the abdominal pain.

(hetacillin, Bristol)

the first penicinate

provides

a broad band of continuous activity

The first penicinate

After world-wide evaluation, Bristol Laboratories introduces a new advanced bactericidal broad-spectrum antibiotic—hetacillin, Versapen.

For the first time, the basic 6-aminopenicillanic acid has been substituted in such a way as to produce a new chemical entity—the first penicinate. In such a drug, the amino nitrogen of 6-APA has been incorporated into a ring structure. Hetacillin is called a penicinate whether in the form of a salt such as the potassium salt or in the form of its free acid. More precisely, a penicinate is a 6-(5-oxo-1-imidazolidinyl) penicillinate.

Initially, Versapen was proved in the laboratory to possess bactericidal activity against a wide range of Gram-positive and Gram-negative organisms while the potential for toxicity remained very low. Now, in the hands of practising physicians, Versapen has been shown to be effective in patients with a wide variety of common infections. The low incidence of side-effects favours Versapen over many other broad-spectrum antibiotics.

Versapen is clinically outstanding: 93.4% cured or improved

Among more than 1500 patients with infections caused by beta-haemolytic streptococci, the frequently resistant enterococci, *Escherichia coli*, *Diplococcus pneumoniae*, *Proteus mirabilis*, *Haemophilus influenzae* and many other Gram-positive and Gram-negative organisms, clinical results of

oral Versapen therapy were excellent.

Because of the wide range of bacteria involved, these results indicate that Versapen will be useful in almost all types of general and hospital practice.

Broad-spectrum and bactericidal

The range of antibacterial activity of Versapen is comparable to other broad-spectrum antibiotics, including chloramphenicol and the tetracyclines. But, unlike these essentially bacteriostatic agents, Versapen is bactericidal. Common bacterial invaders are eradicated not just inhibited.

Well tolerated and rarely causes side-effects

Haematopoietic and hepatic investigations reveal that Versapen is safe: no significant reactions have been reported. Note: Hetacillin shares with the penicillins a potential for producing allergic reactions.

Extended blood levels

Antibacterial serum levels of Versapen are unusually prolonged. After a 250 mg. dose, bactericidal blood concentrations are preserved up to 6 hours and levels are detectable up to 8 hours. The patient benefits from *constant bactericidal action*. Usual adult dosage is 1 or 2 capsules four times per day. Versapen is best given before or between meals. Presentation: 250 mg. capsules, bottles of 20, 100 and 500.

BECAUSE of its Excellent Clinical Results

There are over 400 published references to Broxil in world literature. These confirm its success in infections such as tonsillitis, pharyngitis, otitis media, boils and carbuncles, which in an overwhelming proportion of cases are caused by Gram-positive organisms (staphylococci, streptococci and pneumococci).

BECAUSE of its Specific Activity

Broxil is highly bactericidal to the majority of these organisms, destroying them without disrupting the normal intestinal flora.

BECAUSE of its High Blood Levels

Broxil gives blood levels double those achieved by penicillin V and at least as high as intramuscular injections of penicillin G.

BECAUSE in its syrup form, it is particularly suitable for children

Broxil is readily accepted and tolerated by children, and side effects are minimal.

Psoriasis... rapid response to Alphosyl

... even in previously intractable cases. A patient of 48 who had a generalised psoriasis for 20 years was essentially clear in six weeks.² A girl of 10 with a strong familial history of psoriasis, cleared almost completely after three weeks' application of Alphosyl Cream.² These are just two typical cases from the extensive clinical records underlining Alphosyl's outstanding effectiveness in bringing psoriasis under control.

New Alphosyl lubricating cream. A new water-in-oil dosage form, Alphosyl Lubricating Cream is particularly significant in the treatment of the dry, extremely scaly psoriatic lesion confined to the small site and the intertriginous area. Alphosyl cream is especially helpful in clearing psoriatic plaques exposed to constant friction. By enhancing lubrication of the skin folds, it serves to lessen irritation and facilitate healing. Clearing is prompt, even in previously resistant cases. The effectiveness of Alphosyl in this form is attributable in large measure to its unique cream base. This consists of a combination of saturated and unsaturated free fatty acids, naturally occurring triglycerides and esters that resemble the lipid constituents of normal healthy skin. The vehicle also contains hydrophobic-lipophilic bipolar substances which

enhance the moisture uptake and retention of the amphoteric proteins of the stratum corneum. Significantly, it has been shown that squalane, one of the components of the base, is most effective in dissolving a cement substance in psoriatic scales.

R_x Alphosyl

a first-class prescription for a sick Doctor

It is commonly said that good doctors are bad patients. And more than three-quarters of a century's experience with the medical and dental professions has convinced us that the statement is very often true. A sick doctor is nearly always a worried doctor. Not because of the nature of his illness, but because of the loss of income it may entail.

But we have a specific for this kind of thing. By taking a Sickness and Accident Insurance with us, a doctor can be certain of receiving a substantial part of his normal income whenever he is incapacitated by illness or accident. Further, there is absolutely no limit to the number of claims he may make up to the age of 65.

This is just one example of the many policies we have designed specially for doctors and dentists. And since the Society is wholly owned by the policy holders all the profits belong to them and are distributed by bonus declaration every three years.

If *you* are eligible to join the Society you should be sharing these profits. So why not write to us for further details? There are separate brochures for Sickness and Accident; Educational; Life; Personal Pension; Family Income; Provision for Estate Duty; Car Hire Purchase.

We shall be pleased to send one or more of these at your request. When writing quote ref: No. 001.

Relieves acid pain
Prevents "bloating"

Dyspeptic patients who cannot belch become acutely uncomfortable, even after acid pain has disappeared.

Polycrol (green-and-white tablets or gel) relieves acid pain and assists eructation of stomach gas and air by destroying gastric foam before it passes into the intestine.

Now you can end the
intolerable irritation
of monilial vaginitis—
swiftly... decisively

CANDEPTIN specific therapy for vaginitis caused by *Candida albicans*.

Swift symptomatic relief¹ and decisive resolution of infection²—these are proven benefits of Candeptin in the treatment of monilial vaginitis. *Candida albicans*—the usual cause of infection—is particularly sensitive to this new fungicidal antibiotic.

Laboratory studies³ have shown that Candeptin inhibits *Candida albicans*—even after two days incubation—at the remarkably low concentration of 0.05 mcg/ml. Under the same circumstances nystatin had to be used at 5 mcg/ml to achieve inhibition.

Equally remarkable results have been achieved in clinical practice.^{1,2,3} Of 190 women, both pregnant and non-pregnant, 173 were cured after a single course of treatment. A further 14 responded to a second course.

Detailed information from Sandoz Products Limited

Increased life expectancy has created many new opportunities—but not all your patients are able to take advantage of these opportunities. The problems that old age brings include loss of weight, poor appetite, "spongy" bones, poor resistance to infection, and a feeling of apathy.

These difficulties may be overcome by the administration of ORABOLIN—the oral anabolic agent.

Pharmacological and clinical studies have shown that

ORABOLIN

- Stimulates appetite
- Promotes weight gain
- Increases calcium and nitrogen retention
- Produces significant psychological improvement

FORM and PACK

ORABOLIN—Scored tablets of 2 mg. Ethylestrenol. Containers of 25, 100 and 500.

COMMERCIAL APPOINTMENTS

medical advisers

We invite applications from medical practitioners, preferably under the age of 35, to fill two appointments as Medical Advisers to the Company. The expansion of our medical department has become essential due to the growth of the Company and its increasing participation in the international field of therapeutics.

Candidates should have a sound clinical background and practical experience in an experimental respiratory unit would be an advantage. As they will be expected to liaise with senior clinicians in the U.K. and overseas they should be versatile, have initiative and be able to express themselves clearly. Fluency in French or Spanish would also be useful.

The Doctors appointed would be expected to participate fully in all aspects of the responsibilities of the Medical Department. This includes the initiation and co-ordination of clinical trials, advising the Company on medical matters and maintaining an efficient information service on our products to the medical profession. They would also assist in the medical training of representatives and be prepared to participate in national and international medical meetings.

The Company is based in Loughborough, in Leicestershire, a non-industrial area with good educational facilities and pleasant residential areas. It is a member of the Fisons Group of Companies and Group Contributory Pension and other Welfare Schemes operate.

A Company car will be provided and the salary will be negotiated according to experience.

Full personal details should be sent in confidence to

The Personnel Manager (141),
Fisons Pharmaceuticals Ltd.,
12 Derby Road, Loughborough.

THERE IS OPPORTUNITY FOR YOU IN YOUNG DYNAMIC CANADA

If you have a skill, trade or profession, the time is right, the mood is right for you and Canada to get together. Industrial production in Canada has more than doubled in the last 15 years and is still forging ahead. For years to come Canada will be a country of growth.

You will enjoy life in this young land of opportunity. Wages and salaries are high. Canadians enjoy one of the highest standards of living in the world. Canadian homes are very easy to live in and Government mortgages for the purchase of homes are available.

Your children will have the best possible start in life—free secondary and primary education and every chance of going on to University or to a modern Technical Institute. You and your family will be protected too, by a social welfare programme: family allowances, hospital insurance, unemployment insurance and retirement pension.

Canadians are friendly, down-to-earth people—a large part of the population is of British stock, so you'll have plenty in common. And remember—emigrating to Canada is not like going to the far corners of the globe, you are only six hours away by air, six days by sea.

CANADA Go and grow with CANADA the land of opportunity

Expansion in Canada creates many opportunities for medical personnel—Physicians, Surgeons, Pathologists, also Laboratory Technicians and Radiographers.

ST. ANDREW'S HOSPITAL NORTHAMPTON

President: The Earl Spencer

Medical Director:

James Harper, M.B., F.R.C.P. (Edin.), D.P.M.

This private hospital receives patients, both male and female, suffering from nervous and mental disorders including alcoholism and senile illnesses. The fees range from eighteen guineas per week. Private rooms with special nurses can be provided, either in the hospital or in one of the villas in the grounds. The hospital is situated in 130 acres of pleasant grounds which provide all recreational facilities. These include a nine-hole golf course, sports ground, tennis courts, etc. A Recreation and Occupation Centre, known as Gloucester House, has been opened recently which includes an occupational therapy department, a swimming pool, a squash court and a library with an adjoining reading room.

WANTAGE HOUSE

This is a separate reception unit to which patients may be admitted. It is equipped for the complete investigation of nervous and mental disorders by the most modern methods. All forms of treatment are available.

Charges for treatment at St. Andrew's are allowable for benefit to British United Provident Association and Private Patients Plan subscribers.

For terms and further particulars apply to the Medical Director (Telephone No. 34354, Northampton), who can be seen in London by appointment.

Nulacin and only Nulacin provides intragastric milk-alkali drip therapy for the ambulant patient

“In view of the ineffectiveness of most of the tableted antacids, the milk-alkali tablet (Nulacin) would appear to be the antacid of choice for ambulatory therapy.”

Safe, Simple, Effective

NULACIN TABLETS provide a safe, simple and effective treatment of peptic ulcer.

In treating peptic ulcer a Ryle's tube may be passed through the nose and into the oesophagus and a mixture of milk and antacid allowed to flow continuously over the affected area. This form of therapy can only be employed in those patients who are in bed and for the ambulant patient Nulacin tablets are preferable. Nulacin tablets are prepared from whole milk combined with dextrans and maltose, together with the trisilicate, oxide and carbonate of magnesium and calcium carbonate. Nulacin tablets when allowed to dissolve slowly in the mouth provide milk-alkali drip therapy. In fact, Nulacin tablets have revolutionized the treatment of peptic ulcer.
