RONICOL*TIMESPAN*

gives day-long relief
from symptoms due to 'poor peripheral circulation'

Microphotograph of the bulbar conjunctiva in a man aged 65 with peripheral vascular disease.

The same area two hours after a single Ronicol Timespan tablet, showing marked vasodilation.

Ronicol Timespan presents a powerful vasodilator (β -pyridyl carbinol) in a long-acting tablet form which rapidly produces sustained vasodilation. Because the action is prolonged, peripheral vascular diseases can be treated with a convenient, twice-daily dosage schedule.

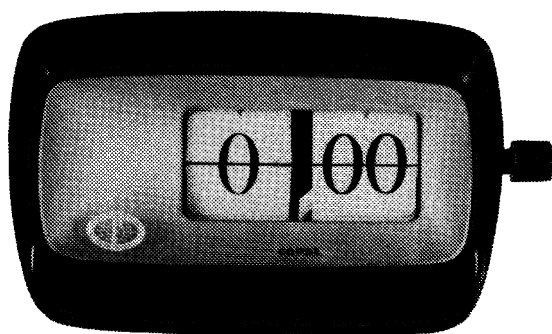

Ronicol Timespan is indicated for:

- peripheral vascular diseases giving rise to 'poor peripheral circulation'
- intermittent claudication
- cramps, including night cramps
- vasospasms such as Raynaud's phenomenon, acrocyanosis and other ischaemic conditions of the limbs.

*Ronicol is the registered trade mark applied to pharmaceutical preparations containing β -pyridyl carbinol, the alcohol corresponding to nicotinic acid. Timespan is the registered trade mark applied to long-acting dosage forms.

'BANISTYL'
the "wide awake"
antihistaminic

**One tablet three times daily effective
in most cases**

Little if any soporific effect

Well tolerated by patients of all ages

'Banistyl' is generally well tolerated at the recommended dosage levels; side-effects are usually of a mild and transient nature. Somnolence is infrequent and generally not marked; when it does occur, it frequently subsides after the first few days of treatment or may be controlled by dosage adjustment. Other side-effects which have been reported and which are usually of little significance include nausea, epigastric pain, vertigo, diarrhoea and headache.

Although there is no evidence to suggest that 'Banistyl' is embryopathic, it is a sound medical principle to avoid, wherever possible, prescribing a new drug during the first three months of pregnancy.

Certain activities, including control of vehicles or machinery, should not be undertaken by a patient starting a course of 'Banistyl' until it is evident that the drug has no soporific or other central nervous system side-effects, or until any such effects have subsided.

'Banistyl' is supplied as tablets containing the equivalent of 20 mg. dimethothiazine (as mesylate).

Best for British women

New Feminor 21—Specially formulated for efficient conception control

The dose of oestrogen required for consistent inhibition of ovulation shows individual and racial differences. For British women the best results have been obtained with 0.1 mg.* Feminor 21 is thus the ideal formulation for them. To inhibit ovulation it employs 0.1 mg of an oestrogen (mestranol) alone for the first sixteen days—with the addition of a progestogen

(norethynodrel) for the last five days to establish a normal, secretory endometrium. Because the total amount of hormone taken is limited to that necessary for effective inhibition of ovulation there is minimum physiological disturbance. The sequential dosage establishes a very regular menstrual cycle with a marked reduction in side effects such as breakthrough bleeding, breast discomfort and weight gain. The 21-tablet regimen is simple to follow, and the new cosmetic-type pack is designed for ease and convenience.

Feminor 21 is presented in packs con-

taining three months supply. A pack containing one month's supply is also available. Each monthly course consists of 21 tablets: 16 pink tablets containing mestranol 0.1 mg, 5 white tablets containing mestranol 0.1 mg, norethynodrel 2.5 mg.

Basic NHS Cost: 15/- three month pack, (5/10d one month pack).

Pyopen Pseudomona

and

PROTEUS VULGARIS
PROTEUS RETTGERI
PROTEUS MORGANII
PROTEUS MIRABILIS

☐ *Proteus* organisms are commonly responsible for many urinary infections, meningitis, septicaemia and superficial infections.

ESCHERICHIA COLI

☐ *E. coli* is the causative organism in such infections as cystitis and pyelonephritis.

Pyopen (carbenicillin) is an injectable penicillin effective against the majority of strains of *Pr. morganii*, *Pr. rettgeri*, *Pr. vulgaris* and *E. coli* in contrast with many other antibiotics which are inactivated by the penicillinases produced by these organisms.

However, some penicillinase producing strains of *Pr. mirabilis* and *E. coli* may inactivate Pyopen.

Pyopen is unique among antibiotics as it combines the safety of a penicillin with the ability to destroy *Pseudomonas pyocyanea* (*Ps. aeruginosa*), *Proteus* organisms, and certain cephaloridine- and ampicillin-resistant hospital strains of *E. coli*.

Pyopen (carbenicillin) is a product of British research at

Dosage

URINARY TRACT INFECTIONS 1g. every six hours by intramuscular injection for 5-10 days.

INFECTED BURNS (Prophylactic Dosage) 1g. every six hours by intramuscular injection for five days.

SEVERE SYSTEMIC INFECTIONS AND SEPTICAEMIA 12-30g. daily by intravenous injection or infusion, together with probenecid 1g. three times daily by mouth.

MENINGITIS Dosage as for septicaemia plus 40mg. daily by intrathecal or intraventricular routes. Full information may be obtained from the Company's Medical Department.

OTHER INFECTIONS Dosage will depend on the site of infection and the sensitivity of the infecting organisms. High intramuscular or intravenous dosage will generally be required. In certain situations, local therapy by irrigation, injection or aerosol inhalation may be used in addition to parenteral administration.

PAEDIATRIC DOSAGE Adult dosage should be reduced according to the age and weight of the child, and will vary widely with the site and severity of infection, and with the sensitivity of the causative organisms. A daily dosage varying between 100-300mg./kg. body weight is suggested as suitable.

Probenecid facilitates attainment of higher and better-sustained blood levels by delaying renal elimination of Pyopen.

Contra-Indication

Pyopen should not be given to penicillin hypersensitive subjects. Caution should be exercised in the treatment of patients with an allergic diathesis.

Side-Effects

As with Penicillin G, slight pain may be experienced at the site of injection. Otherwise side effects are similar to those experienced with other injectable penicillins. Should pain become a problem, the powder may be dissolved in a 0.5% solution of lignocaine. Further information is available from the Company's Medical Department.

ESBATAL

brand

bethanidine sulphate

A recent 2½-year study¹ has confirmed that 'Esbatal' (bethanidine sulphate) provides a more acceptable form of therapy for the patient than other antihypertensive drugs in current use. Control of blood pressure was achieved with 'Esbatal' in about three-quarters of the hypertensive patients treated—and side-effects were rare.¹ In comparing 'Esbatal' with guanethidine and methyldopa the authors considered that 'Esbatal' was to be preferred for beginning treatment in any new hypertensive patient.¹ Better acceptance of 'Esbatal' by the patient, again compared with guanethidine and methyldopa, was also demonstrated in another trial where 'Esbatal' scored the highest rating for patient preference.²

Embarrassment is short-lived with Synalar

Inflammatory dermatoses frequently respond to Synalar in 24-48 hours

Low concentration, optimal skin penetration, prolonged action.

Speed of action. Low concentrations of Synalar achieve optimal skin penetration, frequently with therapeutic response in 24-48 hours. This rapid action greatly reduces the incidence of scratching. The speedy restoration of the epidermal barrier lessens the risk of secondary bacterial infection. **Efficacy.** Synalar has a 95% success rate in inflammatory dermatoses and in pruritic and allergic conditions of the skin. It has often been successful in difficult skin conditions which,

previously, had been unresponsive to other steroid preparations.

Synalar's effective action may last for up to 2 weeks after treatment; there is a build-up of steroid reservoir in the stratum corneum.

Range. The complete flexibility of the Synalar range makes the selection of treatment, according to the type and severity of the condition, a simple one. Synalar is available in cream, ointment, lotion and aerosol form, for the initial treatment of severe

cases; for maintenance therapy and less severe dermatoses, *Synandone* is available as cream, ointment and lotion.

1,000 calories a day...

"The sheet-anchor of most weight-reducing programmes is a low-calorie diet. However . . . it is extremely difficult for the patient to adhere to the diet, and in general the results . . . are poor . . . A suitable diet which ensures the intake of about 1,000 calories a day should be given"¹.

...can be readily achieved and maintained...

"In order to curb the appetite and thus assist patients in keeping to their diet, we are of the opinion that *Durophet-M* (one capsule daily) can be given to advantage for a period of four months"¹. This observation was made in a double-blind trial of *Durophet-M* where 60 patients had a mean weight loss of nearly 20 lb. Only one patient failed to lose weight. It was further noted:

...without undue stimulation...

"... tolerance to this drug was minimal during the period of study. The side-effects were few and did not warrant cessation of treatment. No cases of dependence on the drug appeared"¹.

...with the help of **Durophet-M**

Durophet-M improves the prospect of sustained weight loss because it is formulated not only to restrict calorie intake by curbing the appetite, but also to counter the emotional stresses that are a major underlying factor in most cases of obesity^{2,3,4,5}. *Durophet-M* contains both an effective appetite depressant (laevo- and dextro-amphetamine, ratio 1 : 3) and a calmative, methaqualone. By curbing the appetite and compensating for the solace formerly obtained from overeating, *Durophet-M* overcomes the limitations of simple appetite depressants.

by providing sustained weight loss without undue stimulation *Durophet-M* makes

"...successful treatment of obesity... possible for the large majority of patients in general practice"¹.

a striking demonstration of Lincocin penetration

**Heart Tissue**Assay organism: *Streptococcus hæmolyticus***Lung tissue**Assay organism: *Staphylococcus aureus***Lung tissue**Assay organism: *Diplococcus pneumoniae*

Since antibiotic effectiveness is dependent upon concentration at the site of infection, it is obvious that antibiotic diffusion and tissue penetration are of supreme importance. The accompanying photographs of an experiment in animals demonstrate Lincocin's capacity in this respect.

A healthy dog weighing 9.5 kg. was injected intramuscularly with 25 mg./kg. of lincomycin hydrochloride (base equivalent). After 90 minutes tissue samples were excised and placed on Petri dishes in which the agar had previously been seeded with pathogenic strains of *Staphylococci*, *Streptococci* and *Pneumococci*, respectively. Following incubation these photographs were taken of the plates containing either heart or lung tissue. The clear zones show that within 90 minutes Lincocin had penetrated these tissues in concentrations sufficient to inhibit growth of the pathogenic inocula.

STANDARD The size of the wicket

A famous cricketing standard—the present dimensions of 28" x 9" for the size of the wicket—was set in 1947, having started off in 1700 at 22" x 6", with two stumps and one bail. And to go even further back, the size of the wicket, the distance of the crease from it, and the length of the pitch all correspond with divisions or multiples of the early Tudor unit of length measurement, the "gad" of 16½ ft. and the "ell" of 45 inches.

BALANCED ANTACID TREATMENT

Plus anti-flatulent properties

By its dual action, Diovol restores gastric acid balance, quickly dispels flatus and relieves the pain and discomfort of gastric distension. The silicone defoaming agent infiltrates the mucoid bubbles in the stomach, causes them to burst and release the imprisoned gas.

Diovol is NOT, therefore 'just another antacid' but represents a remarkable advance in the therapy of dyspepsia and peptic ulcer, and for the dispersion of wind post-operatively—particularly after abdominal surgery.

OPILON

selectively improves blood flow in the skin

Strain-gauge plethysmography is one of several techniques for evaluating blood flow in limbs. These tracings were produced using this technique: the steepness of the slopes of the tracing is representative of blood volume. In this instance the patient suffered

from Raynaud's phenomenon in both hands. The tracing above shows blood flow in the finger before treatment, and that below after treatment with OPILON (thymoxamine). The dramatic increase in blood flow is as much as fifteen times.

Opilon is a specific alpha adrenergic blocking agent and its action is confined almost entirely to the periphery. Clinical evidence such as that described above, shows its beneficial influence on blood flow in the skin and superficial tissues. Opilon is not related to the nicotinic acid derivatives and unlike the beta adrenergic drugs, such as isoxuprine, does not affect cardiac rhythm.

Opilon is indicated where peripheral ischaemia is evident, such as Raynaud's phenomenon, chilblains, Ménière's syndrome, acrocyanosis and excessively cold hands and feet. Opilon may also be used to maintain nutrition of the skin, important in many occlusive peripheral disorders.

Tablets of 40 mg thymoxamine in bottles of 50 and 250.

SALARY SCALES OF HOSPITAL MEDICAL STAFF

Following the Seventh Report of the Review Body, new salary scales have been approved. These came into force on October 1, 1966. The scales are set out below:

HOUSE OFFICERS: Each post in this grade shall be tenable for six months. £1,100 per annum for the posts held during the first year; £1,200 per annum for posts held during the second year; £1,300 per annum for posts held during the third and subsequent years, subject to full registration. (No deductions for lodging will be made for compulsory residence.)

SENIOR HOUSE OFFICERS: £1,450 per annum in the first year; £1,550 per annum in the second year; £1,650 per annum in the third or subsequent years. (No deductions for lodging will be made for compulsory residence.)

REGISTRARS: £1,650 per annum, rising by four annual increments of £100 to £2,050. Deductions of £175 per annum for those with remuneration at the first two points on the scale, and £200 per annum for those on the third and subsequent points will be made in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

On assimilation to the scale for Registrars, one increment and one only shall be given for any year or part of a year in excess of two spent previously in the senior house officer grade. Allowances at rates up to £140 per annum shall be payable to house officers, senior house officers and registrars occupying posts approved for such allowances in peripheral hospitals.

SENIOR REGISTRARS: £1,950 per annum rising by one increment of £100 and four further annual increments of £125 to £2,550. Deductions of £225 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.) On assimilation to the salary scale for senior registrars, increments to a maximum of two shall be given for each year or part of a year in excess of three spent previously in the registrar grade.

MEDICAL ASSISTANTS: £1,850 per annum rising by fourteen annual increments of £100 to £3,250. Deductions of £225 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

CONSULTANTS: £3,200 per annum rising by five annual increments of £185, and then by four further increments of £190 to £4,885. Deductions of £350 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

Doctors with satisfactory training will not be excluded from consideration for appointment to consultant posts on the grounds that they have spent little or no time as senior registrars.

All National Health Service hospital appointments are in accordance with the Terms and Conditions of Service of Hospital Medical Staff. Memoranda on the following subjects of particular interest have been issued by the Ministry of Health: Standard of Residential Accommodation, Telephone Charges, Removal Allowances, Study Leave.

Further details may be obtained from the Hospital Secretary, or summaries of the Memoranda may be obtained from the Secretary, British Medical Association. (August, 1967)

MINISTRY OF OVERSEAS DEVELOPMENT

The Need

GENERAL DUTY MEDICAL OFFICERS

For duty both in large new hospitals and in the outlying districts of the Developing Countries overseas, for contract appointments of 2 to 3 years.

The Opportunity Overseas service offers a unique chance for world travel, an opportunity to widen professional experience, and to acquire a broader understanding of the world and its people.

The Advantages Doctors' skill and knowledge will be used to the full on people who have a crying need for their service. Salaries reflect the local cost of living and are normally higher than one would expect to receive in the United Kingdom. There are generous gratuities on satisfactory completion of contract, education allowances for children, free family passages. Accommodation provided usually at a low rent. In most cases superannuation rights can be preserved or maintained.

Salaries Vary widely from country to country with the local cost of living. However, with certain exceptions they range from approximately £1650 to £2900 per annum.

Training Scheme for Recently Qualified Doctors

In return for an undertaking to serve for at least two years in the developing countries overseas the Ministry offers a course of training to recently qualified doctors which is designed to fit them for service overseas and which will be attractive professionally and financially. During the period of training of 12 to 15 months the doctor will receive a retaining fee of £200 per annum in addition to his hospital salary. Write now for full details of the scheme.

DIRECTOR

In the Department of Anaesthetics
Applications are invited for the position of Director of the department of anaesthetics. The duties include responsibility for training of Registrars and Resident Medical Officers, administration of the operating theatres, and supervision of the recovery and intensive therapy wards.

The successful applicant will also be responsible for the provision of anaesthetic services to a subsidiary hospital of 100 beds 14 miles away and provision of a lesser degree of service to a hospital approximately 20 miles distant.

The hospital is a general hospital with beds totalling 743 and covers medical, surgical, obstetrical, gynaecological, urological and orthopaedic services. Out-patient attendances are over 540,000 per annum.

The departmental establishment comprises two full-time anaesthetists in addition to the Director, three sessional anaesthetists and three Registrars.

Salary scale \$8,358 to \$10,408 over five years. After three years a Specialist may be appointed Senior Specialist at a salary of \$11,433. Commencing salary will be determined in relation to the experience of the successful applicant. There is also payable an allowance of \$700 per annum for the administrative responsibilities of running the department. Limited right of private practice is at present under review.

In the event that one of the present full-time staff Anaesthetists is appointed Director of the department, the board may appoint a full-time staff Anaesthetist from the applicants.

Further particulars may be obtained by contacting the undersigned.
Applications, which should include name, age, marital status, qualifications, experience, and names of three referees, close June 21, 1968.—E. G. Currow, General Superintendent. (H.8134)

**ST. ANDREW'S HOSPITAL
NORTHAMPTON**

President: Lieutenant-Colonel J. Chandos-Pole, O.B.E. Medical Director: James Harper, M.B., F.R.C.P.(Edin.), D.P.M.

This private hospital receives patients, both male and female, suffering from nervous and mental disorders, including alcoholism and senile illness. The fees range from twenty guineas per week. Private rooms with special nurses can be provided, either in the hospital or in one of the villas in the grounds. The hospital is situated in 130 acres of pleasant grounds which provide all recreational facilities. These include a nine-hole golf course, sports ground, tennis courts, etc. A recreation and occupation centre, known as Gloucester House, has been opened recently which includes an occupational therapy department, a swimming pool, a squash court and a library with an adjoining reading room.

WANTAGE HOUSE

This is a separate reception unit to which patients may be admitted. It is equipped for the complete investigation of nervous and mental disorders by the most modern methods. All forms of treatment are available.

Charges for treatment at St. Andrew's are allowable for benefit to British United Provident Association and Private Patients Plan subscribers.

For terms and further particulars apply to the Medical Director (Telephone N. 4354 Northampton) who can be seen in London by appointment.

SAFE SIMPLE EFFECTIVE NULACIN

EFFECTIVE, because Nulacin achieves *continuous* neutralisation of hyperacidity. As peptic ulcers arise and recur only in the presence of free acid, Nulacin not only relieves symptoms but is the ideal long-term medical treatment.

SIMPLE, because Nulacin is specially designed to dissolve slowly in the mouth and produce a continuous intragastric milk-alkali drip in the ambulant patient. One tablet provides up to 30 minutes' relief from excess acid.

SAFE, because clinical experience has shown that Nulacin produces no electrolyte disturbances and can be used in *all* patients with peptic ulcers.

NULACIN is a unique combination of whole milk protein and fats with dextrans, maltose and suitable antacids and provides *economical*, long-term medical treatment for peptic ulcer.
