

A UNIQUE ORAL GEL WITH STRIKING ANALGESIC AND ANTISEPTIC PROPERTIES

Bonjela has been shown in formal American trials to bring rapid relief from pain in 90% of all cases of oral ulceration, herpes labialis, gingivitis and denture sores. By rapid relief is meant marked alleviation of pain within 2-3 minutes.

Bonjela also promotes healing whenever the aetiology is partly or wholly

bacterial. Some ulceration originates from endocrinal, viral or fungal causes which may require other forms of treatment.

Even in these cases, where a bacterial element is superimposed on the original infection, Bonjela will reduce the severity of the infection and rapid relief from pain will be obtained.

FORMULA: Choline Salicylate 8.7%, Cetalkonium Chloride 0.01%, Alc. (95%) 39.0%, Menthol 0.057%, Glycer. 4.6%.

INDICATIONS: Herpes labialis, gingivitis, oral ulcerations, cheilosis, denture sores, infant teething disorders.

PRESENTATION: Bonjela is available in 10 g. tubes at a basic N.H.S. cost of 2/8½d. per tube.

more effective than an antihistamine alone

The combination of the potent anti-allergic properties of carbinoxamine with the nasopharyngeal vasoconstrictor properties of pseudoephedrine provides all-round symptomatic control of hay fever and allergic rhinitis. A controlled trial in hay fever and allergic rhinitis (General Practitioner Research Group, 1967) showed that Extil was better, both clinically and statistically, than either of its constituents administered alone.

an effective treatment for cases of Chronic Perionychia

PENOTRANE TINCTURE + OCTAFLEX

Perionychia can be effectively treated by flooding the sulcus between the nail plate and the nail fold with Penotrane Tincture (Hydrargaphen), a powerful antibacterial and antifungal agent; allowing it to dry, and then sealing the sulcus with Octaflex, an antiseptic acrylic resin. When the film has dried, it is waterproof but permeable to water vapour—so that maceration does not occur.

Break the threadworm life-cycle with single-dose Pripsen

Threadworms often infect families, one child can infect the others.

A single dose of Pripsen, taken by each member of the family, can eradicate threadworm infection. Pripsen treats the affected child and protects others against infection. As a precaution against possible re-infection a second dose of Pripsen should be given after two weeks.

Pripsen (piperazine phosphate and standardized senna) is also effective against roundworms.

VARICOSITY?

She'll willingly take your advice if it means wearing fashionable Burson Lightweights

A woman's psychological need for fashion often makes her reluctant to accept your advice to wear elastic stockings. Burson Lightweights have been specially created to provide the answer.

Undetectable in wear, they are truly acceptable to the most fashion-conscious woman—yet are completely effective in relieving the pain and discomfort of a mild varicose condition and are approved by the N.H.S.

Made of alternating strands of strong, supple elastic with strands of sheer nylon, Burson Lightweights combine strength and resilience with stretch in both directions. Horizontal stretch eases the pressure of distended veins; vertical stretch aids the natural flow of blood

back to the heart. Available under N.H.S. (on the EC 10 form) in six normal stocking sizes scientifically adjusted to fit all leg shapes, they come in a pleasing shade.

Thus, in specifying Burson Lightweights when prescribing for mild varicose, you will ensure your patient's relief from discomfort—whilst preserving her confidence and femininity.

Mixogen

Appreciating the limited role of sedatives and tranquillizers in what is essentially a metabolic disturbance, physicians are turning increasingly to the treatment that masters the immediate symptoms of depression and irritability and acts at a fundamental level as prophylaxis against the long-term consequences of ovarian-pituitary imbalance.

'Today when the average woman can expect to reach her threescore years and ten, it would seem unrealistic to deny hormone treatment, which not only alleviates all the troublesome and antisocial symptoms of the menopausal and postmenopausal phases but is also a prophylactic measure against osteoporosis, senile vaginitis, hypertension, and coronary heart disease, to mention but a few hazards of oestrogen depletion.'

The arguments against the use of plain oestrogen therapy – endometrial bleeding and nausea – are countered when Mixogen is used.

'Perhaps the best way of avoiding oestrogenic bleeding is to use one of the oestrogen-testosterone combinations, of which the original – Mixogen – is the best.'²

In angina pectoris Inderal is the only drug which protects the heart from the oxygen-wasting effects of emotion and effort

The results are: increased effort tolerance and a new concept in long-term relief

The action of Inderal is unique: where other treatments attempt either to improve blood flow by dilating the arteries, or simply to sedate the patient, Inderal, through adrenergic beta-receptor blockade, protects the heart from the action of adrenaline. There is a slowing of the heart rate and a reduction in the oxygen needs of the myocardium.

This represents a new concept of long-term relief of angina, rather

than just a treatment of the condition as and when it arises.

Inderal is unique in another way. It is the only treatment consistently proved in double-blind clinical trials. Trials have, in fact, produced an 80% success figure, with more pain-free days and increased effort tolerance. They also show that Inderal (unlike other forms of angina therapy) is of considerable value in very severe cases of angina.

We shall be pleased to send you complete information on Inderal.

ANTIBIOTICS AND THE INTESTINAL FLORA

Treatment with broad spectrum antibiotics suppresses the normal flora, which may be replaced by abnormal resistant organisms causing diarrhoea.

This change can be prevented or reversed by the implantation of *Lactobacillus acidophilus* which has been rendered antibiotic-resistant, and is thus able to multiply freely under these abnormal conditions. The products of growth of the organism are inimical to that of many other bacteria^{1,2} and thus contribute to its rapid preponderance over other species.

Oral treatment with antibiotic-resistant *L. acidophilus* in the form of ENPAC has been shown to eliminate *Candida* from the faeces of infants with antibiotic-induced diarrhoea, with relief of symptoms succeeded by rapid gain in weight^{3,4} and greatly to reduce the numbers of staphylococci in the faeces of patients treated with tetracyclines.⁵

why so many hypertensive patients do well on Aldomet®

Methyldopa BP

- 'Aldomet' offers smooth and even control of blood pressure when the dosage has been established.
- 'Aldomet' usually reduces lying as well as standing blood pressure.
- 'Aldomet' causes much less postural hypotension than other powerful antihypertensive agents.
- 'Aldomet' rarely causes exertional hypotension.
- The dosage of 'Aldomet' is simple, flexible and easily established.

Supplied as tablets containing methyldopa BP equivalent to 250 mg anhydrous methyldopa and, for emergency use, as an injection. Detailed information is available to physicians on request.

In a trial comparing three antihypertensive agents, it was shown that, '...in the patients who could take adequate doses methyldopa provided the best control of blood pressure, with the lowest levels of blood pressure when the patient was supine.'

bethanidine sulphate

A recent 2½-year study¹ has confirmed that 'Esbatal' (bethanidine sulphate) provides a more acceptable form of therapy for the patient than other antihypertensive drugs in current use. Control of blood pressure was achieved with 'Esbatal' in about three-quarters of the hypertensive patients treated—and side-effects were rare.¹ In comparing 'Esbatal' with guanethidine and methyldopa the authors considered that 'Esbatal' was to be preferred for beginning treatment in any new hypertensive patient.¹ Better acceptance of 'Esbatal' by the patient, again compared with guanethidine and methyldopa, was also demonstrated in another trial where 'Esbatal' scored the highest rating for patient preference.²

STANDARD The weight of a tennis ball

The International Lawn Tennis Federation lays down that a tennis ball shall be more than 2oz. and less than $2\frac{1}{8}$ oz. in weight. A fine distinction, you may think. But there is more to come. It must have a uniform outer surface. If there are any seams, they must be stitchless. It must be more than $2\frac{1}{2}$ " and less than $2\frac{5}{8}$ " in diameter, have a bound of more than 53" and less than 58" when dropped 100" upon a concrete base and a deformation of more than .265" and less than .290" when subjected to a pressure of 18 lb. applied to each end of the diameter.

STANDARD The Transvasin therapy for rheumatic symptoms

Transvasin as the standard treatment for the relief of rheumatic symptoms is becoming more and more widely accepted every day. Patients suffering from rheumatic lesions obtain rapid relief with this well-proven and economical medication. The esters of nicotinic, salicylic and p-aminobenzoic acids penetrate the skin and are concentrated at the point of injury, producing superficial erythema and deep hyperaemia. Transvasin is a valuable adjuvant in the treatment of osteo and rheumatoid arthritis.

Medihaler makes the most of a minute dose

In the management of the asthmatic attack *Medihaler* opens airways in only seconds, quickly gives major relief—with only a minute dose. Why does a puff from *Medihaler* have such far-reaching effects? The medication is delivered direct to its site of action in the lungs in the form of a dry spray of particles whose size is determined during manufacture. By this premicronisation, over 85 per cent, by weight, of the particles are delivered at the optimum size for inhalation therapy: small enough to penetrate deep into the finer air passages; heavy enough to remain there during exhalation. With only a minute dose, *Medihaler* gives the rapid and profound relief that is the foremost need of the patient fighting for breath.

Medihaler-iso Forte

contains a suspension of Isoprenaline Sulphate B.P. 20 mg./ml. and delivers 0.4 mg. per dose.

Medihaler-iso

contains a suspension of Isoprenaline Sulphate B.P. 4 mg./ml. and delivers 0.08 mg. per dose.

Dosage

Each puff from *Medihaler* delivers a measured dose. One to three puffs should be sufficient to provide relief in most cases. It should not be necessary for the patient to take further treatment for at least thirty minutes, or more than eight treatments a day.

Children

Medihaler should be administered to children only under the supervision of a responsible adult.

Caution

Isoprenaline is well tolerated by most patients. However, it should be used with caution in the presence of impaired cardiac function, hyperthyroidism and severe hypertension. Isoprenaline is a highly effective agent. The smallest dosage of it which provides relief should not be exceeded.

Basic NHS prices

Medihaler-iso Forte, 17/-; *Medihaler-iso*, 14/4. 400-dose complete unit.

Additional information is available on request. *Medihaler*, *Medihaler-iso* are registered trade marks.

When symptoms of anxiety and depression co-exist, the anxiety is usually easy to recognise, but the depressive state is often less obvious.

In anxiety-depressive conditions, 'Tryptizol', a well-established antidepressant with an intrinsic tranquillising action, has proved of considerable value. In many cases, the patient becomes calmer, mood is lifted, and sleep and appetite improve.

SALARY SCALES OF HOSPITAL MEDICAL STAFF

Following the Seventh Report of the Review Body, new salary scales have been approved. These came into force on October 1, 1966. The scales are set out below:

HOUSE OFFICERS: Each post in this grade shall be tenable for six months. £1,100 per annum for posts held during the first year; £1,200 per annum for posts held during the second year; £1,300 per annum for posts held during the third and subsequent years, subject to full registration.

Deductions of £150 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

SENIOR HOUSE OFFICERS: £1,450 per annum in the first year; £1,550 per annum in the second year; £1,650 per annum in the third or subsequent years. Deductions of £175 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

REGISTRARS: £1,650 per annum, rising by four annual increments of £100 to £2,050.

Deductions of £175 per annum for those with remuneration at the first two points on the scale, and £200 per annum for those on the third and subsequent points will be made in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

On assimilation to the scale for Registrars, one increment and one only shall be given for any year or part of a year in excess of two spent previously in the senior house officer grade.

Allowances at rates up to £140 per annum shall be payable to house officers, senior house officers and registrars occupying posts approved for such allowances in peripheral hospitals.

SENIOR REGISTRARS: £1,950 per annum rising by one increment of £100 and four further annual increments of £125 to £2,550.

Deductions of £225 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

On assimilation to the salary scale for senior registrars, increments to a maximum of two shall be given for each year or part of a year in excess of three spent previously in the registrar grade.

MEDICAL ASSISTANTS: £1,850 per annum rising by fourteen annual increments of £100 to £3,250.

Deductions of £225 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

CONSULTANTS: £3,200 per annum rising by five annual increments of £185, and then by four further increments of £190 to £4,885.

Deductions of £350 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

Doctors with satisfactory training will not be excluded from consideration for appointment to consultant posts on the grounds that they have spent little or no time as senior registrars.

All National Health Service hospital appointments are in accordance with the Terms and Conditions of Service of Hospital Medical Staff. Memoranda on the following subjects of particular interest have been issued by the Ministry of Health: Standard of Residential Accommodation, Telephone Charges, Removal Allowances, Study Leave.

Further details may be obtained from the Hospital Secretary, or B.M.A. members may obtain summaries of the Memoranda or explanatory handouts from the Secretary, British Medical Association. (August, 1967)

Entering salary will be \$20,000 per annum with an additional \$1,000 for Board Certification. Additional salary increments have been requested from the legislature—excellent fringe benefits, including dual retirement plans, paid vacations, sick leave, 40 hour work week, minimum "on call" duty. This is a challenging position in a progressive community of 60,000 population in the rolling piney woods of East Texas.

In addition, there is need for a staff physician experienced and/or trained in chest diseases. Entering salary \$19,000 per annum. Candidates for both positions must possess Texas licence or be eligible to secure Texas licence within one year. E.C.F.M.G. certified candidates will be considered. Contact Medical Superintendent. NORTHAMPTON**

President:
Lieutenant-Colonel J. Chandos-Pole, O.B.E.
Medical Director:
James Harper, M.B., F.R.C.P.(Edin.), D.P.M.

This private hospital receives patients, both male and female, suffering from nervous and mental disorders, including alcoholism and senile illness. The fees range from twenty guineas per week. Private rooms with special nurses can be provided, either in the hospital or in one of the villas in the grounds. The hospital is situated in 130 acres of pleasant grounds which provide all recreational facilities. These include a nine-hole golf course, sports ground, tennis courts, etc. A recreation and occupation centre, known as Gloucester House, has been opened recently which includes an occupational therapy department, a swimming pool, a squash court and a library with an adjoining reading room.

WANTAGE HOUSE
This is a separate reception unit to which patients may be admitted. It is equipped for the complete investigation of nervous and mental disorders by the most modern methods. All forms of treatment are available. Charges for treatment at St. Andrew's are allowable for benefit to British United Provident Association and Private Patients Plan subscribers. For terms and further particulars apply to the Medical Director (Telephone N.3 34354 Northampton), who can be seen in London by appointment.

Here's a case for low-cost Betnovate

Leg lesion in discoid eczema of nine months' duration, treated unsuccessfully with hydrocortisone

Add rapid response and that means double economy

Complete clearance after two weeks' treatment with Betnovate Ointment under occlusion

For your detailed reading

Betnovate, Betnovate-C and Betnovate-N skin preparations

Betamethasone 17-valerate with or without chionoform or neomycin for dermatological use

Presentation

All preparations contain 0.1% betamethasone as 17-valerate:

Betnovate Ointment: 15, 30 and 100 gram tubes

Betnovate Cream: 15, 30 and 100 gram tubes

Betnovate Lotion: 20 ml bottle

Betnovate Scalp Application: 30 gram plastic squeeze bottle

with 3% chionoform:

Betnovate-C Ointment: 15, 30 and 100 gram tubes

Betnovate-C Cream: 15, 30 and 100 gram tubes

or with 0.5% neomycin sulphate:

Betnovate-N Ointment: 15, 30 and 100 gram tubes

Betnovate-N Cream: 15, 30 and 100 gram tubes

Betnovate-N Lotion: 20 ml bottle

*Betnovate-N Tulle: tin of 10 pieces (4 in x 4 in)

Advantages

In the skin-blanching test¹ Betnovate (betamethasone 17-valerate) was shown to be the most potent of a long series of corticosteroids put to test.² The validity of this screening test has been confirmed by clinical experience indicating that Betnovate is therapeutically more effective than the other topical corticosteroids in the majority of cases.³

Indications

Betnovate produces a remarkably rapid and profound response in inflammatory dermatoses which normally respond to topical corticosteroid therapy. It also makes possible effective topical therapy of more difficult conditions such as resistant psoriasis, hypertrophic lichen planus, lichen simplex chronicus and eczema of the hands. Clinical indications for use of Betnovate dermatological preparations include:

psoriasis; eczema – including atopic eczema, infantile eczema, Besnier's (flexural) prurigo, nummular (discoid) eczema, stasis eczema, otitis externa; *neurodermatoses* – including lichen simplex; *anal and vulval pruritus*; *seborrhoeic dermatitis*; *intertrigo*; *contact sensitivity reactions and allergies* –

including insect bites; *sunburn*; *'prickly heat'*; *lichen planus*; *discoid lupus erythematosus*; *generalised erythrodermia*.

The preparations with neomycin should be used when bacterial infection is present or suspected. Similarly, the preparations containing chionoform can be used when bacterial or fungal infection is present or suspected.

Side effects

Corticosteroids should never be used in the presence of infection except in conjunction with effective chemotherapy. Usually the preparations are well tolerated. However, sensitisation phenomena have on very rare occasions been reported with the use of corticosteroid-containing preparations for local application. From existing reports it is difficult to determine whether or not the corticosteroid or other components were responsible. Neomycin, largely confined in its use to local application, has been reported to give rise to skin sensitisation. These occurrences, however, are rather uncommon and this antibiotic is probably one of the best tolerated when used for local application. It can be said to have a very low sensitising potential. If, by remote chance any indication of sensitisation occurs, application should be stopped immediately. When occlusive dressings are used on extensive areas, or for prolonged periods, it is desirable that, as with all topical corticosteroids, the possibility of systemic absorption should be considered.

Application

Ointment, Cream, Lotion and Scalp Application

A small quantity should be applied gently to the affected area once or twice daily until improvement occurs. It may then be possible to maintain progressive improvement using one application a day or less.

Tulle

Apply direct to the lesion and cover with an absorbent dressing if necessary.

Legal restriction

To be supplied on prescription only: (Therapeutic Substances Act: Part II).
