## PENBRITIN

He's better; his throat's stopped hurting; his eyes don't water any more; he's out of bed. It didn't last too long and his mother is relieved to get him back to school so soon. The record card shows a straightforward recovery from an Upper Respiratory Tract Infection. And it shows something far more important . . .

### Penbritin is the answer – *first time*

Bacterial infection of the upper respiratory tract may be caused by a variety of organisms. Penbritin with its wide spectrum of activity can kill all the common pathogens responsible for Upper Respiratory Tract Infection. By prescribing Penbritin you can stop the spread of infection and prevent complications.

Penbritin has a high degree of safety and can be prescribed with confidence for patients of any age. The syrup formulation of Penbritin is well accepted, especially by children and it is highly probable that they will take the full prescribed course. The prescribing of five-day courses or longer, has been simplified by the introduction of 100 ml. bottles of Syrup and Syrup Forte.

In the treatment of Upper Respiratory Tract Infections, Penbritin is the answer—first time. And so often the only prescription needed.

### Dosage:

Children under 2 years: 62.5 - 125 mg.  
2 - 10 years: 125 - 250 mg.  
Adults: 250 mg.

All dosages q.d.s. a.c. In severe infections these doses may be increased or Penbritin given by injection.

**Contra-indication:** Penicillin allergy.

**Side-effects:** As with other penicillins.

**Availability:** Penbritin (ampicillin B.P.)

Syrup, 125 mg./5 ml.

Syrup Forte, 250 mg./5 ml.

Paediatric Tablets, 125 mg.

# An aid to oral hygiene

Maintenance of oral hygiene during the post-operative period, especially among geriatric patients, is obviously essential. But at the same time this can prove to be somewhat time-consuming for the nursing staff.

However, recent experience in a London hospital has shown that the patient can help to provide his own nursing care, with the minimum of effort.

This experience covers patients who are fed intravenously and post-operative cases who find normal eating and drinking difficult. These patients often exhibit signs of mouth infection very quickly, and treatment for this can often cause considerable discomfort.

A more pleasant treatment is possible in many cases, for it has been found that giving the patient chewing gum promotes salivary gland activity. Patients are encouraged to chew gum at two-hourly periods, and this treatment frequently allays the symptoms and produces a considerable improvement in the condition of the tongue and mucosa. Quite striking results have been noted after carrying out this treatment for a 24-hour period.

# Break the threadworm life-cycle with single-dose Pripsen

Threadworms often infect families, one child can infect the others.

A single dose of Pripsen, taken by each member of the family, can eradicate threadworm infection. Pripsen treats the affected child and protects others against infection. As a precaution against possible re-infection a second dose of Pripsen should be repeated after two weeks.

Pripsen (piperazine phosphate and standardized senna) is also effective against roundworms.

Tube of 10G (one full dose). Tins of 80G (dose measure enclosed).

## **NEW!** a service for disposal of dressings and waste

★ SUFFERERS FROM ILEOSTOMY ★ THE PARALYSED ★  
★ THE MENTALLY RETARDED ★ S.R.Ns. & MIDWIVES ★  
★ FOR GENERAL HOSPITAL USE ★

*This new service operates in two ways*

**1** Supplying completely disposable COMEX containers for use by S.R.Ns. & Midwives or in scattered households holding individual sufferers.

**2** Supplying replaceable and reusable COMDISCAN containers for places such as Hospitals, where large amounts of dressings and waste are accumulated at some central point or points.

COMEX wholly expendable sanitary disposable Units (CWESDU) are supplied with the interior pre-treated with disinfectant. In addition, a plastic dispenser in the lid releases a measured amount of disinfectant every time the container is used. All waste is thus impregnated with a disinfectant (which is not acid) and development of germs and unpleasant odours is prevented.

COMEX Units can be put out for collection with normal household refuse.

COMDISCAN Units are completely hygienic to Hospital standards. They contain a concentrated aromatic disinfectant which effectively prevents the development of germs and bacteria but is harmless to people and property. COMDISCAN Units are collected regularly and replaced by newly-prepared sterile Units.

Elderly patients present a problem because there's no "cure" for old age. So how do you help those who come to you with troubles which may well be a result of cerebrovascular insufficiency? Cyclospasmol may not be able to "cure" old age, but it can bring about a remission of some of its symptoms. It improves mental function\*, orientation\*, communication\*, and sociability\*, when these activities are impaired by a failing cerebral circulation.

For these patients the recommended dosage is 400mg. three times daily, and the new 400mg. capsule is the most convenient presentation for both ease of prescribing and patient acceptability.

\*Clinical evidence available on request.

**Prescribing information:-**

**Indications:** All cases of cerebrovascular insufficiency. Cyclospasmol is particularly useful in the long-term management of chronic insufficiency and of the sequelae of strokes.

Cyclospasmol therapy should not be initiated until the acute phase of a cerebrovascular accident is over and the condition has stabilised.

**Side effects:** At very high dosage levels, nausea and gastro-intestinal distress may occasionally occur.

**Dosage:** 1 x 400mg. capsule T.D.S.

In more severe cases, this may be increased to one 400mg. capsule Q.D.S. (1600mg. daily)

Several weeks' usage may be necessary before significant therapeutic benefit is achieved.

In many cases, particularly in the elderly, the drug may need to be continued indefinitely to prevent a recurrence of the original symptoms.

**LIMBITROL**

**Librium\* and amitriptyline**

\*Registered trade mark.

# LIMBITROL\*

antidepressant and anxiolytic

A combination of Librium and amitriptyline for the treatment of anxiety/depression

## Indications

Limbitrol is indicated for all conditions of mixed anxiety and depression, whichever may be predominant:

Anxiety masking depression

Depression with secondary anxiety or agitation

Depression secondary to anxiety states

Phobic anxiety with or without depression

These conditions may often be associated with a variety of psychosomatic symptoms such as:

Nervous dyspepsia, anorexia, diarrhoea, headache, insomnia, pseudoangina etc.

## Dosage

Limbitrol is available in two strengths—Limbitrol 10, and Limbitrol 5

### Limbitrol 10

One capsule Limbitrol 10 three times daily. This dosage may be increased to six capsules daily in severe cases, or reduced to one or two capsules daily for maintenance.

### Limbitrol 5

Limbitrol 5 may be used in elderly patients and other patients who may require a lower dosage.

\*Registered trade mark

## Properties

Limbitrol combines the clinically proven anxiolytic effect of Librium\*(chlordiazepoxide), which acts specifically on the emotional centres of the limbic system, with the antidepressant action of amitriptyline, which is thought to act by inhibiting the reuptake of noradrenaline and serotonin in the brain. This combination thus relieves both aspects of the anxiety/depression syndrome which has been shown to occur considerably more frequently than either factor alone.

## Tolerance

At recommended doses Limbitrol is very well tolerated. The most commonly occurring minor side-effects are drowsiness during the first few days of treatment, and anticholinergic effects such as dryness of the mouth, constipation and moderate tachycardia. More rarely blurring of vision, dizziness, headache, diaphoresis, and weakness and fatigue have been reported. These effects normally disappear rapidly and spontaneously, and may be largely obviated by adjustments of dosage, or by initiating treatment with a relatively low dosage, thereafter increasing to the therapeutically optimum level. Serious toxic effects on liver or bone marrow have not been encountered.

## Contra-indications

Because of its anticholinergic effects, Limbitrol should not be given to patients suffering from glaucoma or prostatic enlargement.

## Precautions

The possibility of suicide in depressed patients should be borne in mind, and patients should be carefully supervised, especially during the early stages of treatment.

Limbitrol should not be given with monoamine oxidase inhibitors, and in patients who have been receiving monoamine oxidase inhibitor treatment, a period of at least seven days should be allowed to elapse between withdrawal of monoamine oxidase inhibitors and initiation of Limbitrol therapy.

Due to the possibility of greater sensitivity to its action, elderly patients should always be started on a low dose of Limbitrol.

Although experiments in mice, rats and rabbits have not demonstrated any teratogenic effect attributable to Limbitrol, it should be administered with extreme caution during pregnancy, and also in patients with liver, kidney or blood disease.

As with any centrally acting drug, patients should be advised to avoid taking alcohol during treatment, since the individual reaction cannot be foreseen. Similarly, like all drugs of this type Limbitrol may modify the patients' reactions (driving ability, behaviour in traffic etc.) to a varying extent, depending on dosage, administration and individual susceptibility.

Like other antidepressants, Limbitrol may precipitate states of excitation in paranoid and subdelirious patients.

## Presentation

Limbitrol is the registered trade mark applied to preparations containing chlordiazepoxide (7-chloro-2-methylamino-5-phenyl-3H-1,4-benzodiazepine-4-oxide) and amitriptyline (5-(3-dimethyl-aminopropylidene)-dibenzo [a,d][1,4] - cycloheptadiene) as the hydrochloride, and is available as follows:

Limbitrol 10 capsules: chlordiazepoxide 10 mg;

amitriptyline HCl 25mg in packings of 100 and 500.

Limbitrol 5 capsules: chlordiazepoxide 5 mg; amitriptyline HCl 12.5 mg in packings of 100 and 500.

**Holidays  
for the  
Golfer**

To many doctors and their wives a golf bag is just as much an essential of holiday luggage  
as any suitcase. Possibly a limit might have to be put on the number of clubs, and the trolley  
reluctantly left at home, but these are the only concessions.

There is little doubt that one's game, particularly in the case of the casual weekend golfer,  
is improved immeasurably by playing on as many different courses as possible. One can become  
so accustomed to the local course that powers of observation, distance estimations, wind  
allowances, appreciation of hazards, and so on are all apt to become rusty. A golfing holiday  
is not only a tonic for one's health but for one's game as well.

Golfing can be relaxing or exciting according to fancy. It is not fair or reasonable to expect  
the standard of greens and fairway of a country course to be as high as those of a championship  
one, but both have their attractions and challenges. Whatever your desires—sea, country,  
moors, or mountains, in this country or overseas—there you will find hotels and links.

Courses at the seaside or within easy reach are naturally numerous and in most cases very  
good. A considerable number of hotels have their own courses and also make special arrange-  
ments for golfing weekends. Others can offer reduced green fees on local courses. Most of  
the hotels have amenities to keep children amused while parents are playing and generally  
provide all possible assistance to ensure carefree games and a good holiday as well.

One of the attractions of golf is that it is an all-weather activity. Nevertheless, on holiday  
many people prefer to have sunshine if possible, and so they hopefully go abroad.

Portugal has some really excellent courses at Vimeiro, Estoril, Montes de Alvor, and Val  
de Lobo. The coast north of Lisbon is relatively unspoilt, it has many fine sandy beaches,  
and the countryside is very beautiful. Spain is as popular as ever, and golfers are well catered  
for. The more adventuresome can travel to Morocco, Madeira, the Bahamas, Majorca, or  
Malta.

rapid relief  
insignificant cardiovascular effect...**

With *Medihaler-duo*, Riker makes a further notable contribution to bronchodilator therapy. *Medihaler-duo* enables the physician to make a more positive approach to reversal of airway obstruction in bronchial asthma and chronic bronchitis.

*Medihaler-duo* takes advantage of the finding that the bronchodilator effect of isoprenaline can be significantly enhanced by the action of phenylephrine. As a result, it is possible to obtain a greater response to treatment than would be experienced from comparable doses of isoprenaline administered alone. Moreover, this enhanced bronchodilator effect is achieved without significant change in pulse rate or blood pressure at recommended dosage. These results have been confirmed in clinical trials<sup>1,2,3,4,5,6,7</sup>. With *Medihaler-duo*, relief is immediate in onset and often prolonged for three or more hours. Effect on the cardiovascular system has been found to be insignificant even in patients with uncomplicated hypertension.

## ...in bronchial asthma and chronic bronchitis

**Composition** *Medihaler-duo* contains a suspension of isoprenaline hydrochloride 8 mg./ml., phenylephrine bitartrate 12 mg./ml. and delivers to the patient a measured dose containing 0.16 mg. isoprenaline hydrochloride and 0.24 mg. phenylephrine bitartrate.

**Contra-indications** There are no absolute contra-indications, but *Medihaler-duo* should be used with caution in the presence of cardiac disease, hypertension or hyperthyroidism.

**Side-effects** Overdosage may cause dry mouth, palpitations, or nervousness.

**Dosage** Each puff from *Medihaler-duo* delivers a measured dose. One to three puffs should be sufficient to provide relief in most cases. It should not be necessary for the patient to take further treatment for at least thirty minutes, or more than eight treatments a day.

**Children** *Medihaler-duo* should be administered to children only under the supervision of a responsible adult.

**Basic NHS price** Standard pack (complete 400-dose unit) 17/- plus Purchase Tax.

## 3 widely-used ingredients Heinz leave out

Artificial colouring. Artificial flavouring. Artificial preservatives.

Heinz will have none of them in their Baby Foods!

Every Heinz Baby Food begins with a well-balanced recipe and the finest ingredients. Next, meticulous checking and inspection—right down to each individual grain of rice or split pea.

Finally, cooking. Years of experience in preparing baby foods enable Heinz to preserve the natural colour, the natural flavour and the

natural food values.

So you can be sure that Heinz Baby Foods are at least as nutritious as the very best a mother can prepare in her own kitchen. But the effort is far less and the choice far greater. New breakfast varieties introduced last year bring the total number of Heinz Strained and Junior varieties up to 77.

Heinz will gladly provide more detailed information to help you to advise mothers. So if you have any questions, please write to the

# SEPTRIN in urinary infections

...“clearly superior to  
either of the other treatments”...

(*Brit med J.* 1969, 1, 525.)

‘Septrin’ (trimethoprim and sulphamethoxazole) was compared with ampicillin and sulphadimidine in the treatment of 106 hospitalised patients with urinary infections. The cure rates one week after finishing treatment were: ‘Septrin’ 85 per cent, ampicillin 70 per cent, and sulphadimidine 40 per cent; and after four or five weeks 67, 52 and 15 per cent respectively. (Cure = eradication of original organism from urine.)  
*Brit med J.* 1969, 1, 541.

The editorial which accompanied the publication of these results states that the superior effect of ‘Septrin’ was “... even more appreciable in the re-treatment of patients who had failed on another drug.” It also points out that the urinary tract is one of the largest fields

of usefulness for the new treatment, for very clear reasons:

1. Trimethoprim not only attains therapeutic tissue levels, but is excreted unchanged in high concentration in the urine.
2. All Gram-negative bacilli occurring in the urine, except *Pseudomonas aeruginosa*, are usually highly sensitive to it.
3. Its minimum inhibitory concentration is extremely low, and would do credit to a potent antibiotic.
4. Added to these advantages is the fact that trimethoprim and a sulphonamide, by blocking successive stages in the same metabolic process, exert a strongly synergic effect, and this action is *bactericidal*.

# Are doctors immortal?

Some patients seem to think that doctors never die. Or become ill. Or have accidents.

But as a doctor you know that your chances of falling sick, or breaking a leg tomorrow are the same as everyone else's. And the effect on your life and family is much graver.

Your practice, for instance, must be kept going. So your income plunges overnight. And your life becomes stifled by financial worries: how to keep your family, meet school fees, pay the mortgage. To a sick man worry is a poisonous enemy.

That's why it's so wise to insure against sickness or early death. Wiser still to insure with the company run exclusively for doctors and dentists: the Medical Sickness Society.

You know that one day you may need this insurance. So write today. Together we'll find the policy which will work hardest for you.

Do it now.

Footloose and  
fungus-free with  
**Tinaderm**

# Glaxo brief

## Footloose and fungus-free

Athlete's foot patients prefer Tinaderm because it is pleasant to use, soothing to apply and it usually works. Tinaderm (1% tolnaftate) swiftly relieves burning, itching and discomfort – often within 48 hours – followed by rapid clearance of lesions. Tolnaftate is not a keratolytic agent, but applied topically, it penetrates lesions to kill the fungus. Thus there is no excessive scaling to cause soreness and spread infection. Tinaderm Cream is gentle and soothing even when applied to raw areas. Tinaderm Powder has a special value where perspiration is a problem, and when sprinkled into all footwear, can help to clear up any reservoirs of infection. In athlete's foot, Tinaderm gives swift relief – even in resistant cases.

## Dermatoses likely to become infected need **Betnovate-C**

.... for example, seborrhoeic eczema, infantile eczema, dermatoses in moist areas where bacteria and monilia are usually present, and those under plastic occlusion.<sup>1, 2</sup> Betnovate-C has also been shown to dramatically lessen the high relapse rate of otitis externa.<sup>3</sup> Dermatoses likely to become infected need Betnovate-C because it combines the most effective topical steroid – betamethasone 17-valerate<sup>4, 5</sup> – with antibacterial, antifungal clioquinol. The quinolines (clioquinol) "have the advantage that they do not produce antibiotic-resistant organisms and ... yeast infections do not flourish in the place of pyogenic bacteria."<sup>6</sup> Moist, infected dermatoses can get better faster with Betnovate-C.

A morning's surgery  
brings a lot of  
**Crystapen G** patients

How many patients needing antibiotics do you see in a morning? Whatever the number, there is a strong case for using penicillin, the drug of choice in so many common infections. An established penicillin in a modern form is Crystapen G (penicillin G) – one you can rely on in the treatment of strep. throats for example. Crystapen G is as effective clinically as penicillin V.

All Crystapen G 250 mg and 125 mg tablets are printed with their name and strength, are film-coated and easy to swallow. Alternatively, specify Crystapen G Syrup – 250 mg/5 ml for adults, 125 mg/5 ml for children. Each bottle (100 ml) gives five days' therapy at normal dosage. When your patients need oral penicillin you can rely on Crystapen G.

There's no mistaking  
Glaxo's oxytetracycline –  
each tiny tablet says  
**Clinimycin**

Clinimycin is the only oxytetracycline with its brand name on the tablet. Therefore the patient knows what to ask for when he needs extra tablets – he cannot confuse Clinimycin with any other tablets taken simultaneously. And in the event of overdosage the tablets can be speedily identified.

Clinimycin is also the smallest oxytetracycline 250 mg tablet. Clinimycin tablets are so small and slip down so easily that even a child can swallow them. Any taste stays well behind the film-coating.

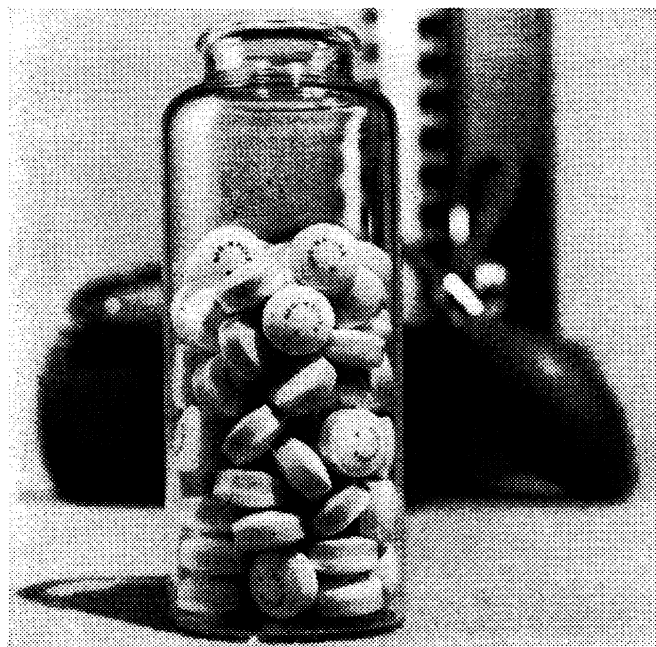

Moreover, Clinimycin is among the least expensive of all the branded oxytetracyclines.

## Unique tablet for the safer management of hypertension— **Neo-NaClex-K**

Neo-NaClex-K is a unique bendrofluazide/potassium chloride tablet for use in all grades of hypertension. The white layer contains 2.5 mg bendrofluazide which lowers the blood pressure in mild hypertension by an average of 10 to 15 mm Hg and maintains this fall on a low dosage. In severe hypertension, the addition of a more potent drug will produce an adequate fall. The dosage of the more potent drug can be up to 50% less than that required without the thiazide treatment, so reducing side effects. The coloured layer of each Neo-NaClex-K tablet contains 630 mg potassium chloride which is released slowly to minimise the danger of gastric irritation or small bowel ulceration.

# Seborrhoeic dermatitis of the scalp completely controlled in 81.1% of cases\*

Seborrhoeic dermatitis of the scalp often proves difficult to control. Conventional shampoos frequently fail to improve the condition. It may have important clinical associations such as acne, otitis externa, blepharitis and seborrhoeic dermatitis of the face and body. For many people seborrhoeic dermatitis of the scalp and dandruff are demoralising and a source of embarrassment. The effective way of controlling your patients' seborrhoeic dermatitis and dandruff, is by prescribing SELSUN. When success in clearing the condition boosts your patients' ego, so much the better.

Department of Biochemistry****M.Sc. IN BIOCHEMISTRY**

The Department of Biochemistry offers a postgraduate course in **Biochemical Mechanisms, Enzymology and Biochemical Techniques** as a method of entry into biochemistry, alternative to an honours course in this subject, and is primarily intended for honours graduates in chemistry, physics, biology, microbiology and medicine. The course, which can lead to the M.Sc. degree and/or a D.I.C., is designed to give participants a broad theoretical and practical biochemical training which will enable them afterwards to specialize in the area of biochemical research for which their basic undergraduate training has made them most qualified. Students successfully completing the course may be allowed to proceed to study for a Ph.D. degree within the Department. The course extends from early September to the end of July and includes:

Enzymes, coenzymes and their functions  
Biological energy transfer  
Metabolic pathways and control mechanisms  
Biosynthesis

Tracer methodology, biochemical separations and instrumentation

Students will gain direct practical experience in using the most modern biochemical instrumentation.

## MSL MANAGEMENT SELECTION

Please state briefly, in writing, how each requirement is met. Nothing will be disclosed, unless you give permission after a confidential interview.

## Ethical Pharmaceuticals

## Medical Advisers

## London area

The client company is the British subsidiary of a fast growing international group. It has in fact outpaced its parent in the rate of growth, and is recognized as one of the most dynamic in the British pharmaceuticals industry, both in expansion of established products and in the development of new ones. A recently concluded production and marketing agreement with a well known continental company enhances the company's potential still more. All this necessitates the augmenting of the medical advisory staff. The men appointed will work in close touch with product and clinical research doctors (new up-to-date laboratory facilities are in course of construction); they will be responsible for the initiation and control of clinical trials at hospitals and university centres, for giving guidance to the profession on the application of the company's products, for marketing support in medical literature and representative training, and for maintaining contact with relevant professional bodies.

Applications are invited from British registered doctors, preferably with some industry experience, in their late twenties or early thirties. Specialization is not called for but emphasis in medical experience is desirable. Fluency in French or German is an advantage. Salary will be not less than £3,500 for men not experienced in the industry, and will be negotiable above that according to experience; contributory pension; car; relocation expenses. Please write to L. V. Taylor, quoting AM. 42060.

A Fruitful and Important  
Medical Career

Have you as a doctor seriously considered what an interesting and worthwhile career can be had in the scientifically and medically stimulating atmosphere of a medical team in the pharmaceutical industry?

This is an opportunity to join such a team working with pharmacologically active and medically interesting new compounds in different fields of medicine.

Our present research compounds have potential use in the treatment of hypertension, ischaemic heart disease and other vascular disorders, asthma and bronchitis, the relief of pain, as anti-convulsant therapy and many other fields.

By being positively involved in the pre-clinical aspects and personally co-ordinating the early and subsequent clinical studies the doctor gets the opportunity of intellectual satisfaction and is deeply involved in the new and exciting subject of clinical therapeutics.

A doctor in the medical team can expect an attractive salary, together with a very generous non-contributory pension scheme and life assurance. A car is provided. If you would like to make a career in the pharmaceutical industry, please write in confidence to:

Julian H. Shelley, Medical Director,  
Boehringer Ingelheim Limited,  
Isleworth House, Great West Rd, Isleworth, Middx.

*A different class of bronchodilator*

**MORE SELECTIVE · LONGER ACTING · MORE EFFECTIVE**

## **A NEW STANDARD IN BRONCHODILATOR THERAPY**

Previously available  $\beta$ -adrenergic stimulants such as isoprenaline and orciprenaline act on the  $\beta_1$  receptors of heart muscle as well as on the  $\beta_2$  receptors of bronchial muscle. Consequently, undesirable increases in heart rate and pulse pressure sometimes occur when these drugs are used to produce bronchodilatation.

Ventolin is different : first because it is highly selective in its action, affecting primarily  $\beta_2$  receptors : second, because it is more effective than existing bronchodilators : and third, because it is longer-acting.

# ***major metabolic activity in obesity proved by British research...***

Obese patients develop a block to muscle glucose uptake causing a diversion of ingested carbohydrate to adipose tissue. Fenfluramine is the first drug to have been shown to correct this metabolic defect. By restoring metabolic equi-

librium fenfluramine re-activates muscle glucose uptake and diverts the ingested carbohydrate away from adipose tissue. Thus weight loss is encouraged. It is probable that the known very effective, non-cns hunger regulation of Ponderax is mediated

through the metabolic action. Glycoliptic agents act to restore equilibrium where an imbalance exists between the tissues in glucose and/or lipid metabolism. Ponderax is the first such agent and marks a really significant advance in treating obesity.

## **...PONDERAX<sup>®</sup> FENFLURAMINE** ***is the first glycoliptic agent***

"...fenfluramine does in fact mimic the metabolic pattern seen in lean subjects who have greater muscle glucose uptake than fat persons."

With ORLEST  
the new combined 28-day oral contraceptive  
**she won't have to remember**

Until now a woman taking a combined oral contraceptive has had to play something of a memory game. Three weeks on the pill, then stop. One week off, then start.

Now Orlest\* 28 1 mg. is presented as a simple 'no interruption' course—and not a sequential treatment. The 28-day course consists of 21 yellow tablets containing both norethisterone acetate 1 mg. (a low progestogen formula) and ethinyloestradiol 0.05 mg. (an established oestrogen) and 7 white tablets containing a placebo which are taken during the normal menstruation period. Extensive tests have shown that Orlest has an appreciably low incidence of side effects.

With Orlest there are no more starting day problems. Virtually eliminates patient error. No more forgetting.

## ST. ANDREW'S HOSPITAL, NORTHAMPTON

Medical Director: James Harper, M.D., F.R.C.P. (Edin.), D.P.M.  
St. Andrew's Hospital is a private psychiatric hospital situated in 130 acres of parkland in the county town of Northampton. In general, patients are admitted to Wantage House, a reception unit in the grounds, which is equipped for the investigation and treatment of all forms of mental and nervous illness. In addition, there is accommodation mainly in private rooms, both in the main hospital and in various villas, for longer stay patients and geriatric patients. The hospital's amenities include Gloucester House, which comprises an occupational therapy department, swimming-pool, a squash court and library, while in the grounds there are tennis courts, a nine hole golf course, etc. Fees range from 25 guineas per week, and charges for treatment at St. Andrew's Hospital are allowable for benefit to British United Provident Association and Private Patients Plan subscribers. Further particulars can be obtained from the Medical Director, St. Andrew's Hospital, Northampton (Tel.: Northampton 34354). Write for details or in consultation by appointment, either at the hospital or at 55 Harley Street, London W.1.

# why

# so many hypertensive patients do well on Aldomet®

Methyldopa BP

- 'Aldomet' offers smooth and even control of blood pressure when the dosage has been established.
- 'Aldomet' usually reduces lying as well as standing blood pressure.
- 'Aldomet' causes much less postural hypotension than other powerful antihypertensive agents.
- 'Aldomet' rarely causes exertional hypotension.
- The dosage of 'Aldomet' is simple, flexible and easily established.

Supplied as tablets containing methyldopa BP equivalent to 250 mg anhydrous methyldopa and, for emergency use, as an injection. Detailed information is available to physicians on request.

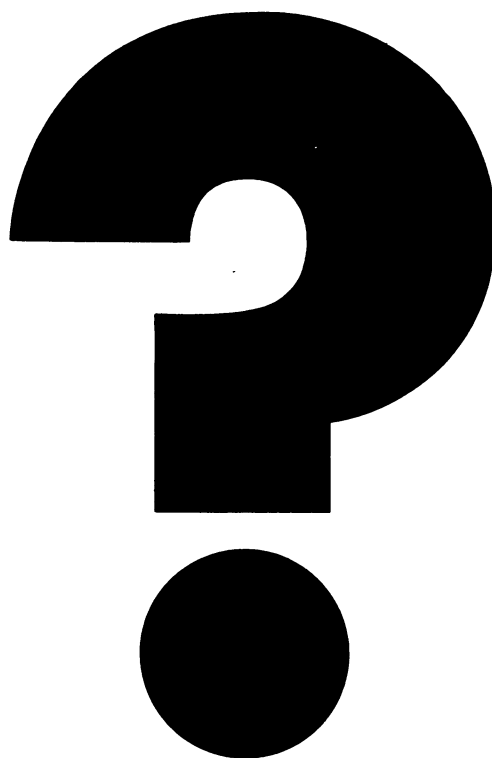

In a trial comparing three antihypertensive agents, it was shown that, '... in the patients who could take adequate doses methyldopa provided the best control of blood pressure, with the lowest levels of blood pressure when the patient was supine.'

# What is a *Nacton forte* condition<sup>regd.</sup>

A *Nacton forte* condition is a set of symptoms that lead you to suspect a peptic ulcer.

Your patient has chronic epigastric pain.

He's smoking too much and his meals are irregular.

He has dyspepsia associated with food.

He worries.

You'll keep trying to get him to stop smoking and to eat more sensibly,  
before referring him to hospital for radiological examination.

Meanwhile his pain continues.

## That's a *Nacton forte* condition

*Nacton forte* stops this kind of pain at source. It allows your patient to lead a normal life—enjoying a normal diet, normal sleep, and a normal working day. And if the patient does have a peptic ulcer, *Nacton forte* will both ease the symptoms and ensure a healing environment.

One small tablet taken 3 times a day and at bedtime:

- \* Controls pain
- \* Permits a more liberal diet
- \* Eliminates routine need for antacids
- \* Leaves the electrolyte balance of the body undisturbed

\* *Nacton forte*—a new presentation from Bencard—provides the most convenient effective dose of poldine methylsulphate B.P. (4 mg) in a single tablet form

\* Will not induce side-effects in most cases

\* Daily cost of treatment 9½d. (Basic NHS cost 20/- per 100 tablets)

This is just one of the *Nacton forte* conditions.  
Others are outlined elsewhere in this series.

Seven years' continuous therapy has shown no toxic effects on bone-marrow, liver or kidneys: nor have patients developed tolerance to the dosage used. Overdosage may induce characteristic atropine-like side-effects: close supervision is therefore recommended in the early stage of treatment with patients in whom tachycardia, difficulty in micturition or increase in ocular tension would present particular problems. Not intended for administration to children.
