URINARY TRACT INFECTION PENBRITIN

She has a history of urinary tract infection in pregnancy and was distressed rather than concerned when the symptoms recurred this time. The concern is yours, for you know that the renal tissue may already be infected – or could become so if this infection ascends. And that a chronic and serious condition may result. You need an antimicrobial agent which will minimise these risks.

Penbritin is the answer – *first time*

Highly active against the common domiciliary causes of urinary tract infection (E.coli, Proteus mirabilis and Strep. faecalis). Not only active, but bactericidal—killing rather than just inhibiting. And bacteridical not only in urine, where very high levels are achieved, but also in the bloodstream and renal tissue.

This combination of extensive bactericidal activity with effective concentration at the possible sites of urinary infection means the elimination of sensitive organisms from the renal tract, and the minimum risk of relapse—well proven in clinical trials.

Penbritin also brings the safety of a penicillin to the treatment of urinary tract infections, particularly important in your pregnant patients. And in severe cases, for instance acute pyelonephritis, treatment may be commenced by injection.

In the treatment of urinary tract infections, Penbritin is the answer—first time. And so often the only prescription needed.

Availability: Penbritin (ampicillin B.P.)
Capsules, 250 and 500 mg.
Injections, 100 mg, 250 mg, 500 mg.
Syrup, 125 mg/5 ml.

Break the threadworm life-cycle with single-dose Pripsen

Threadworms often infect families, one child can infect the others.

A single dose of Pripsen, taken by each member of the family, can eradicate threadworm infection. Pripsen treats the affected child and protects others against infection. As a precaution against possible re-infection a second dose of Pripsen should be given after two weeks.

Pripsen (piperazine phosphate and standardized senna) is also effective against roundworms.

Tube of 10G (one full dose). Tins of 80G (dose measure enclosed).
Pripsen can be mixed with milk or water.

Translated by J L Raven MRCP (Guy's Hospital, London)

June 1969: 950 pages: £15 15s. prepublication £13 13s.

The German edition of this comprehensive work on blood and serum groups is already referred to in German medical circles simply as "Prokop/Uhlenbruck". The text combines the knowledge of an eminent specialist in forensic medicine and the knowledge of a distinguished bio-chemist. Their collaboration has produced a synoptic presentation of a vast subject in a manner not hitherto attempted in any other country.

Women Doctors

Thinking of returning to practise?

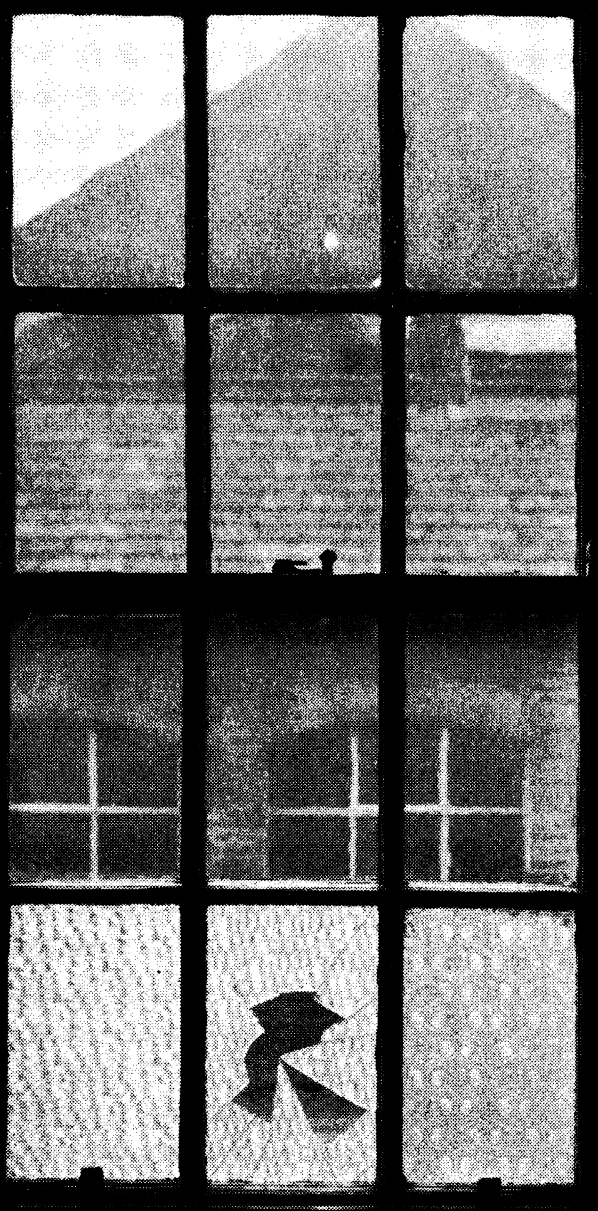

Hospital work can offer you special advantages.

You may not have been in active practice for a while for family or other reasons. You may be thinking of taking up professional work again, either now or within a year or so.

The hospital service can offer you very real advantages besides providing refresher training for doctors intending to take up or return to hospital posts. Hospitals realise that women doctors with personal or family commitments will wish to undertake part-time rather than full-time work, and will try their best to arrange this. Some hospitals can provide married accommodation and day-care for young children.

If you are interested, now or for the future, please write to the Senior Administrative Medical Officer at the Regional Hospital Board, who would like to know what sort of work you would like to do and your qualifications. You can get the address from the Secretary of your local hospital.

Issued by the Department of Health and Social Security.

"Fewer clothes were torn and fewer window panes smashed."

"Excellent results obtained in modifying the behaviour of some of the most intractable, long-term, psychiatric patients were gratifying and confirm prior clinical impressions of the value of pericyanine in hospital practice."

The Retreat, York

For the Treatment of Psychiatric Illnesses

This Private Registered Nursing Home at York of 275 beds, established in 1792, is managed by members of the Religious Society of Friends (Quakers).

It combines psychological and physical investigations and modern forms of treatment for patients suffering from psychiatric illnesses, including drug dependence, and has a separate unit for the assessment and treatment of psycho-geriatric conditions. There are also facilities for long-stay patients.

The Hospital is surrounded by 42 acres of its own grounds and is within easy walking distance of the City centre. In recent years, the Hospital has been modernised throughout. A new spacious occupational therapy centre provides a wide range of creative activities.

British United Provident Association and Private Patients Plan assist their members who become patients at The Retreat within the range of their published benefits.

Neobacrin Tulle the complete wound dressing

Neobacrin Tulle is the complete wound dressing. It is impregnated with neomycin and bacitracin – the antibiotics of choice for topical application (BNF 1968). These antibiotics give high bactericidal activity against a very wide range of gram-positive and gram-negative organisms. Because there are two antibiotics present, there is little opportunity for resistance to develop.

The dressing itself promotes healing without adhering to granulating surfaces and will not tear off new skin when removed.

And it is one of the least expensive tulle preparations available.

That's why all minor dermal injuries respond to the protection of Neobacrin Tulle.

Safe. Simple. Economical.

BACTRIM* ROCHE DRAPSULES†
a smoothly acceptable first attack on many infections, particularly in the urinary and respiratory tracts

The Bactrim Roche Drapsule is a new presentation consisting of a sugar-coated tablet in a capsule-shaped form. It is designed for ease of swallowing and also for high patient acceptability and simple identification. Because of its bactericidal action, Bactrim Roche is valuable in the treatment of many infections. In the treatment of urinary tract infections, for example, a high success rate has been achieved. The usual caution should, however, be observed in prescribing for women of child-bearing age and the drug should not be given during pregnancy. In addition to the Drapsule presentation, Bactrim Roche is also available as a syrup and paediatric tablets.

Ventolin INHALER

Trade Mark

(Salbutamol)

A different class of bronchodilator

MORE SELECTIVE · LONGER ACTING · MORE EFFECTIVE

A NEW STANDARD IN BRONCHODILATOR THERAPY

Previously available β-adrenergic stimulants such as isoprenaline and orciprenaline act on the β_1 receptors of heart muscle as well as on the β_2 receptors of bronchial muscle. Consequently, undesirable increases in heart rate and pulse pressure sometimes occur when these drugs are used to produce bronchodilatation. Ventolin is different: first because it is highly selective in its action, affecting primarily β_2 receptors: second, because it is more effective than existing bronchodilators: and third, because it is longer-acting.

MORE EFFECTIVE

Clinical trials have shown that Ventolin Inhaler is a more effective bronchodilator than isoprenaline or orciprenaline when given by inhalation.

LONGER ACTING

Ventolin is unusually long-acting, its effect persisting for at least four hours. By contrast, isoprenaline, even in large doses, has a characteristically intense but transient effect. In another study using whole-body plethysmography, inhalation of 100 µg of Ventolin produced an almost immediate maximal increase in airway conductance which was sustained for four to six hours.

MORE SELECTIVE

No side effects have been reported with therapeutic doses of Ventolin Inhaler. In studies comparing Ventolin with isoprenaline, a major difference found was that Ventolin did not stimulate the heart or affect the blood pressure, even after inhalation of a relatively large dose.

MORE ACCEPTABLE TO PATIENTS

Patients expressed a marked preference for Ventolin Inhaler in double-blind studies comparing Ventolin with aerosols containing isoprenaline or orciprenaline.

SAFETY IN USE

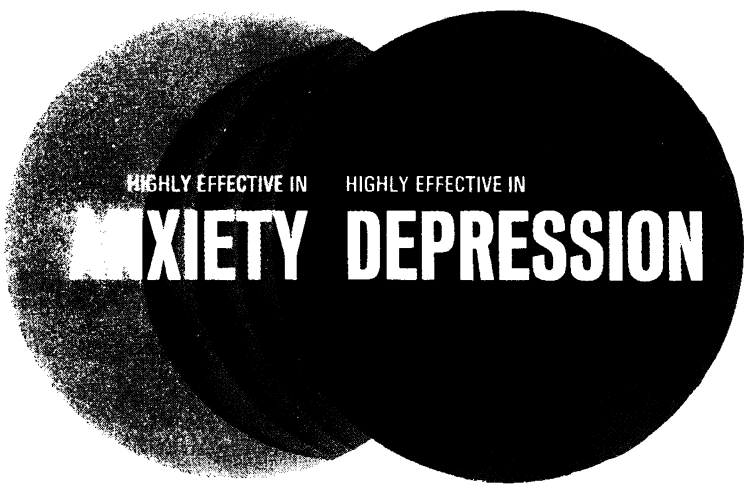

Past experience suggests that misuse of aerosol bronchodilators by asthmatic patients may lead to dangerous effects on the heart or give a false sense of security to patients with incipient status asthmaticus. Ventolin Inhaler has no effect on the heart in therapeutic dosage and has a long duration of action. Both these properties provide additional margins of safety: the lack of cardiac effects should reduce any likelihood of deaths due to ventricular fibrillation and the long duration of action makes it possible for patients to realise in time if the drug is becoming less effective. Because an effective treatment with Ventolin Inhaler should last for at least four hours, patients have been advised to consult their doctor immediately if the effect lasts for less than three hours, so enabling the doctor to take timely action.

John Elworthy much prefers his second wife

So does the re-vitalized Mrs. Elworthy herself, her family and her friends.

Taking a new look at the menopause, doctors are questioning the desirability—and even the logic—of suppressing with sedatives and tranquillizers an essentially metabolic condition. Mixogen gives complete mastery of the whole menopausal condition.

They have it on authority that today '... when the average woman can expect to reach her threescore years and ten, it would seem unrealistic to deny hormone treatment, which not only alleviates all the troublesome and antisocial symptoms of the menopausal and postmenopausal phases but is also a prophylactic measure against osteoporosis, senile vaginitis, hypertension, and coronary heart disease, to mention but a few hazards of oestrogen depletion.'[1]

Plain oestrogen therapy, which may give endometrial bleeding and nausea, is surpassed by Mixogen.

'Perhaps the best way of avoiding oestrogenic bleeding is to use one of the oestrogen-testosterone combinations, of which the original—*Mixogen*—is the best.'[2]

With five days of Norgesic, next week could be worked, not wasted

In just five days, the patient with a painful muscular condition could be back at work or well on the way—with *Norgesic*. Of 251 patients given *Norgesic*, nearly nine out of every ten recovered or improved in five days[1]. Six days was the average treatment time when uniformly good or fair relief of pain was gained by nine-tenths of 478 patients given *Norgesic*[2].

Norgesic gives the patient the chance of rapid and reliable relief of pain—and an early return to normal work.

Norgesic contains two agents acting in different but complementary ways. Orphenadrine citrate releases muscles from painful and incapacitating stiffness. Paracetamol relieves the pain of local tissue damage. By relieving both pain and muscle spasm *Norgesic* quickly restores the pain-free movement that plays a major part in speeding recovery, overcomes the limitations of simple analgesics, and spares the patient wasted days of immobility and needless pain.

Each tablet contains Orphenadrine Citrate B.P. 35 mg. and Paracetamol B.P. 450 mg. Dosage is two tablets three times daily. **Side effects:** within the recommended dosage, undesirable side-effects are uncommon. Dry mouth, nausea, blurring of vision, dizziness restlessness or drowsiness may however occur in some patients susceptible to the parasympatholytic action of orphenadrine. These symptoms disappear rapidly following reduction of dosage or withdrawal of treatment. **Contra-indications** to *Norgesic* result from the parasympatholytic action of orphenadrine. *Norgesic* should not be given to patients with glaucoma, urinary retention (e.g. in prostatic hypertrophy or bladder neck obstruction) or myasthenia gravis. It should be used with caution in patients with tachycardia.

Basic NHS prices: 100 tablets 14/4; 500 tablets 70/-. *Norgesic* is a registered trade mark.

New oestrogen-free

NORMENON

continuous-progestin conception regulator

the third dimension in conception control

Which patients are best suited to Normenon?

(i) patients who have experienced unduly troublesome side-effects with currently available oral contraceptives.[1,2]
e.g. nausea, weight gain, headache, migraine, depression

(ii) patients who have exhibited disorders in the past suggesting that the administration of oestrogen is undesirable.[3,4]
e.g. liver disorder, varicose veins

(iii) patients with 'anxieties' associated with (a) the oestrogen component[3,7,8] or (b) pituitary-ovarian suppression.[3,5]

(iv) young married women of unproven fertility.[9]

(v) the postpartum patient who wishes to breast-feed her baby.[10]

Full prescribing information and professional samples available from:—

St. Ives House, Maidenhead, Berkshire

Normenon

continuous-progestin conception regulator

a pill-a-day, every day.

The contraceptive protection provided by Normenon is **less than that of the combined oral contraceptive**[6] and better than that of the I.U.D. (intra-uterine device).[11]

Each tablet contains 0.5 mg Chlormadinone Acetate, a progestin devoid of oestrogenic or androgenic effects.[12,13]
Available in special calendar dispenser-wallets of 42 tablets (SIX weeks' supply).

Norinyl-1

ultra-low dose 'balanced' conception regulator.[14]

For patients where maximum contraceptive protection is the uppermost consideration.

Each tablet contains 1 mg Norethisterone B.P. and 0.05 mg Mestranol B.P.
Available in easy-to-follow wallets of 21 tablets (one month's supply).

Norinyl-2

low-dose 'progestogenic' conception regulator.[14]

For patients with pre-existing menorrhagia who may experience increased menstrual irregularity with Normenon.

Each tablet contains 2 mg Norethisterone B.P. and 0.1 mg Mestranol B.P.
Available in easy-to-follow wallets of 21 tablets (one month's supply).

A letter from the Committee on Safety of Drugs (Brit. med. J. 1968 4 :120) requested doctors to report on the Committee's "yellow cards" any pregnancies occurring in women taking oral contraceptives.

"What's that?"

It's the new 'Ilosone' 500 mg tablet.

"Why 500 mg?"

Because it enables 'Ilosone', the everyday antibiotic, to be given in a simple twice a day dosage – an easy dosage for the patient to follow, and less risk of missed doses than with q.i.d. regimens.

"So?"

So your patient has a continuously effective blood level of 'Ilosone' – already well known for its bactericidal effect in infections of the respiratory tract – but with simple b.i.d. dosage.

Ilosone 500 mg tablet for twice a day dosage

Further information available on request.
Eli Lilly and Company Limited, Basingstoke, England.

Precaution: On rare occasions there have been reports of cholestatic jaundice, generally when treatment has been prolonged for ten days or more. All such cases have regressed, usually promptly, when 'Ilosone' was discontinued. However, 'Ilosone' should not be used in persons who have previously developed jaundice or other sensitivity reactions in association with its use, or in patients with pre-existing liver disease or dysfunction.

'Ilosone' is the Lilly trade mark for erythromycin estolate

Latest news about PYOPEN

IN THE TREATMENT OF REFRACTORY GRAM-NEGATIVE INFECTIONS

Beecham Research Laboratories announce two important developments with this exceptional antibiotic.

5 GRAM VIAL

In response to requests for a larger vial for intravenous use in the treatment of systemic infections due to Pseudomonas pyocyanea and other Gram-negative organisms, a 5 gram vial becomes available from Monday, June 30th, 1969. This provides a convenient dosage form in these infections, where the recommended intravenous dosage may be 20 - 30 G daily. The 1 gram vial continues to be available for intramuscular use. Full details are provided in the packaging leaflet which accompanies each pack of 5 vials.

PRICE REDUCTION

Simultaneously, the price of the existing 1 gram vials will be reduced by approximately 15%, this reduction being made possible by the rapid acceptance and increased use of Pyopen. The 5 gram vial will be introduced within this revised price structure.

Wyeth

Head of Toxicology and Pathology

This leading Pharmaceutical Company is seeking to appoint an experienced scientist to head its Toxicology and Pathology Department.

The responsibilities of the post include both research and service aspects of toxicological studies of potential new drugs and the presentation of all relevant data to the Dunlop Committee. The operational activities of the Department include histopathology, haematology, teratology, biochemistry, histochemistry and, principally, these relate to animal studies.

Close collaboration with senior colleagues in the fields of chemistry, pharmacology, pharmacy and clinical investigation is a particular feature of the appointment.

Applicants may well possess a medical or veterinary qualification, and experience in histopathology would be particularly valuable, although these factors are not regarded as essential requirements.

The appointment will be located in the Medical Research Institute at Taplow, near Maidenhead, and its importance to the Company will be reflected in the salary offered. A non-contributory pension scheme is operated.

Please apply to: **Personnel Manager,**
John Wyeth and Brother Limited,
Huntercombe Lane South,

POSTGRADUATE COURSE—IMMUNOFLUORESCENT METHODS IN VIROLOGY

An instructional course will be held in the teaching laboratories of Glasgow Royal Infirmary, from September 22 to 26, 1969. This course will be given by the staff of the Virology Section, University Department of Bacteriology, Belvidere Hospital, assisted by guest lecturers who are authorities on the immunofluorescent technique.

The course is designed to help eliminate problems which arise in the use of immunofluorescence in virological work. It is intended for virologists and trainees, both medical and non-medical, and will consist of a series of lectures, demonstrations and practical classes. The emphasis will be on the preparation and subsequent use of good quality immunofluorescent reagents for virus diagnosis and research. Students will prepare, titrate and use these reagents.

Towards the end of the course, participants will have the opportunity to use the new automatic fluoro-scanning microscope for evaluation of specimens which have been prepared during the course.

Accommodation will be available in one of the university halls of residence.

The course fee is £25.

Physicians
for clinical trials U.K. and Europe

These are exceptionally interesting, absorbing and stimulating opportunities for qualified Physicians who have a leaning towards clinical research.

Parke, Davis & Company, who have long enjoyed an enviable reputation in the pharmaceutical field, are at present expanding their clinical research effort and now wish to appoint two Physicians to play a major part in the design, initiation, follow-up, statistical evaluation and medical interpretation of clinical trials on new drugs.

Essential qualifications are a wide interest in medicine, a well developed critical faculty and a good knowledge of modern therapeutics. An ability to communicate is also most important as considerable contact with leaders in the medical profession will be involved.

Applicants, preferably aged 30/35, should be graduates of a British Medical School and already have substantial clinical experience. Research experience, while useful, is not essential.

Working conditions in this highly progressive organisation are first-class. An excellent salary will be offered and generous additional benefits include pension scheme and company car. Mobility is essential as travel in the U.K. and in Europe will be required from time to time. Successful applicants will also pay an initial visit to the Parent Company in the U.S.A. Although based at Hounslow, the Company will be moving to a new plant in South Wales during 1971.

THE NATIONAL SOCIETY FOR EPILEPTICS
CHALFONT CENTRE FOR EPILEPSY

ASSISTANT PHYSICIAN

This is a full-time appointment starting October 1, 1969. The centre has about 500 beds, and admits patients suffering from epilepsy. There is provision for permanent residents but there is an increasing emphasis on the admission of short-term patients for stabilization and rehabilitation.

The primary duty of the Assistant Physician is for the general medical care of patients, including minor casualties. Other duties and salary would depend upon the interests of the applicant. Someone interested in a permanent appointment would command full salary and would be expected to assist the Senior Physician with the various problems involved in the development of the centre. At least equal consideration would be given to an applicant who, at a slightly lower salary and for a limited period, would be interested in carrying out research under the direction of the Senior Physician, and it would be hoped in association with a London teaching hospital.

Salary scale £3,030 to £4,110 per annum. Staff pension scheme (N.H.S. superannuation transferable). A modern four-bedroomed bungalow is available at a moderate rent (furnished if required). Further particulars may be obtained from the House Governor and Secretary, telephone number Chalfont St. Giles 3991. Prospective applicants are advised to arrange to meet the Senior Physician to discuss the appointment.

Applications, giving details of age, qualifications, and experience, together with the names of three referees, should be submitted before July 5 to the House Governor and Secretary, The National Society for Epileptics, Chalfont Centre for Epilepsy, Chalfont St. Peter, Buckinghamshire, endorsed "Assistant Physician" in the bottom left hand corner of the envelope. Applications will be treated in strict confidence. (19000)

Medical Advisers in the Pharmaceutical Industry

Physicians with a special interest in clinical pharmacology and the scientific appraisal of new drugs are needed to increase the therapeutic research potential of a pharmaceutical company which has a long and successful history of product research and which produces and sells a wide range of well-accepted products in the U.K. and overseas. It is supported by substantial research facilities in Europe as well as in this country.

A senior position is vacant for a man who already has the necessary experience in the industry, and this should appeal to someone who feels a need for closer links with research colleagues.

There are also places for younger men who, having completed three years' general professional training at Registrar or equivalent level, are seeking a financially and intellectually rewarding vocation of increasing importance and influence.

Close collaboration with scientist colleagues and with clinical investigators in the U.K. and overseas is an essential feature of the work of these doctors.

Knowledge of a foreign language is an advantage.

Excellent conditions of work and remuneration will be offered.

For detailed information, interested doctors are invited to write, giving a detailed curriculum vitae, to:

WHAT'S BEHIND THE MOUNTING CLINICAL EVIDENCE FOR INTAL CO?

...a happier life for the

Reduced chest tightness, cough, sputum production, reduced incidence of acute asthmatic attacks, and improved exercise tolerance—all factors which make for a happier and more normal life—these are the benefits that INTAL COMPOUND brings to many asthmatic patients.

Essentially a prophylactic, INTAL COMPOUND is based on disodium cromoglycate—a drug that differs in mode of action from bronchodilators, corticosteroids, and antihistamines. As well as providing both objective and subjective improvement, INTAL COMPOUND often allows significant reduction in bronchodilator and steroid dosages.

In a period of just over a year since its introduction, numerous clinical reports have demonstrated the efficacy of disodium cromoglycate in the prophylactic management of allergic bronchial asthma.

'. . . some patients, particularly young, clearly allergic subjects, respond dramatically to the drug . . .' Medicine Today, *Brit med J*, 1968, **3**, 172

'In the case of patients with seasonal asthma, it is reasonable to prescribe it for the duration of the time during which they are usually subject to asthma. Patients who are allergic to grass pollens have a two or three months' season lasting from May to July.' *Current Medicine and Drugs*, 1968, **9**, 3

'The number of doses (of bronchodilators) inhaled was reduced from an average of 30 a patient during the placebo period to 13 during the active period.' *Brit med J*, 1968, **2**, 340

'A significant reduction in steroid requirements as well as other forms of routine therapy was observed during treatment with disodium cromoglycate.' *Practitioner*, 1968, **201**, 915
