

"...its prophylactic use may be confidently expected to reduce anaerobic sepsis rates of around 20 per cent and 50 per cent respectively to nil."

It's not only in the prevention^{2,3,5,8,14,15,17} of anaerobic infections that 'Flagyl' has shown striking success; 'Flagyl' is also regarded as the agent of choice in the treatment of anaerobic infections.^{2-13,16}

The importance of 'Flagyl'* in this new indication is already firmly established. Both tablets and suppositories are available, to provide appropriate medication, in adults or children, in therapeutic and prophylactic applications.

Nature nearly discovered a cure for duodenal and gastric ulcers.

ASTRAGALLUS
GLYCYPHYLLOS

We just perfected it.

For thousands of years, liquorice has been used medicinally. For the past thirty years, its efficacy in promoting the natural healing of gastric and duodenal ulcers has been acknowledged.

Now CAVED*-S offers the full therapeutic benefits of liquorice without the disadvantages which formerly limited its use. An exclusive process removes the glycyrrhizinic acid responsible for salt and water retention, without diminishing the efficacy of medicinal liquorice in accelerating ulcer healing.

With its proven record of reliability and lack of side effects, it makes sense to try CAVED*-S first when treating even the most severe ulcer cases.

CAVED*-S

It's naturally the treatment of choice.

Single Copies of issues published in the current year cost 80p in the United Kingdom and Irish Republic and US\$2.00 overseas. Back number prices on application to the Subscription Manager.

Leo Laboratories Limited
Hayes Gate House, Hayes, Middx.

ANNOUNCING THE FIRST AMIDINO-PENICILLIN

The introduction of SELEXID (mecillinam), the first amidino-penicillin, represents a new chapter in the history of antibiotics.*

Extensive research by chemists and microbiologists has resulted in the development of SELEXID, the first radically new derivative of 6-APA in a decade.

The chemical differences from other beta-lactam antibiotics have far reaching clinical consequences. SELEXID acts in a unique way on the cell wall thus reducing the chance of cross-resistance and often giving synergistic action with the penicillins and cephalosporins.

SELEXID exhibits high activity against certain Gram-negative bacteria and in vitro studies have shown it to be up to 40 times more active than ampicillin against E.coli, Klebsiella and Salmonella species.

SELEXID is indicated for infections caused by sensitive Gram-negative organisms, in particular, urinary tract infections and Salmonellosis. SELEXID can be advantageously considered for use with those antibiotics where synergism has been demonstrated.

SELEXID

A totally new antibiotic

Presentation: White film coated tablets containing 200 mg pivmecillinam hydrochloride. *Oral dose:* Range from 200 mg 8 hourly to 400 mg 6 hourly for urinary tract infections and from 1.2-2.4 g daily for salmonellosis. Tablets should be taken with food. *Contra-indications:* Penicillin or cephalosporin hypersensitivity. *Precautions Adverse Reactions:* In accordance with normal practice Selexid should be avoided in the 1st trimester of pregnancy. Dosage may need modification when renal function is impaired. Routine monitoring of liver and renal function advisable with prolonged therapy. Gastro-intestinal upset, rash, and anaphylaxis may occur. Product Licence No. 0043/0048 *Selexid is a trade mark.
