Angina doesn't affect the brain, liver or lungs but some non-selective beta-blockers may. Prescribe once daily 'Tenormin' and concentrate your attack on angina where it is most needed: the heart.

'Tenormin' appears to be the most cardioselective beta-blocker available.¹ It is at least as effective as other blockers but is less likely to upset hepatic carbohydrate metabolism, precipitate bronchospasm or produce unwanted central nervous effects.

TENORMIN

One tablet, Once daily.

Contraindications & Side Effects:
'Tenormin' is contraindicated in patients with 2nd degree or 3rd degree heart block. Side effects attributable to its pharmacological actions include cold extremities, muscular fatigue and, in isolated cases, bradycardia. Sleep disturbances of the type noted with other beta-blockers have rarely been reported.
