ACNE?

patient
confidence

"Acne is an almost universal complaint in adolescence." *

"Many patients when they seek the help of their doctor are depressed, discouraged and disillusioned. Their own efforts at treatment have failed, or the first prescription was not the cure they anticipated. In the management of acne the patient must appreciate that he or she may have to persevere with treatment throughout their teens, and it should be emphasised that in this way one hopes to limit as far as possible the severity of the lesions and prevent severe or permanent scarring." *

When patients like these ask for your help remember that clinical reports show that acne responds to Quinoderm.

Available as Quinoderm
with Hydrocortisone Cream 30G. for initial treatment.
Quinoderm Cream 25G. for subsequent treatment.

Prothiaden works beneath the disguises of depression

The disguises of depression and the patient's brave face may fool everyone but his doctor. To a growing number of doctors the benefits of Prothiaden are also obvious. In trials, Prothiaden has shown superiority to amitriptyline and with less side effects.^{1,2,3}

Unlike tranquillisers which merely act against anxiety and may mask a dangerously deepening depression, Prothiaden also treats the underlying illness.

Now a leading antidepressant, Prothiaden provides

prompt response and early improvement in patterns of sleep. The 75mg tablet, employed in a simple evening dosage regimen, gives complete 24 hour therapeutic cover—with minimal risk of daytime drowsiness.

Prothiaden 75mg

a simple, evening dosage regimen treats the underlying depressive illness.

Abbreviated Prescribing Information

Presentation Prothiaden is dothiepin hydrochloride, an antidepressant of the tricyclic group. It is available as 25 mg capsules and 75 mg tablets.

Dosage Prothiaden should be given in a dosage of 75 to 150 mg daily, based on response and severity. This may be taken as a single evening dose. In certain circumstances, i.e. in hospital use, Prothiaden has been given in dosages up to 225 mg daily.

Precautions and Contra-indications Prothiaden has anticholinergic properties; therefore, it may precipitate urinary retention in susceptible individuals and its use should be avoided in patients with existing or potential urinary retention. Prothiaden should not be used in patients with closed-angle glaucoma. Caution is advised when treating epileptic patients and those with cardiovascular disorders. Prothiaden should not be used with MAO inhibitors.

Side Effects These are usually mild and normally controlled by reducing the dosage. The following have been reported: dryness of mouth, constipation, disturbed accommodation, orthostatic hypotension, palpitations, somnolence, tremor, headache.

Basic NHS Cost 100 x 75 mg £4.52

*"As soon as I started with morning sickness,
I lost my appetite."*

*"It's my little boy, doctor. Ever since he had
the 'flu, he just hasn't eaten."*

*"With this ulcer of mine playing up,
I can't eat a thing."*

*"I suppose you'd call it nervous tension—
it's put me right off my food."*

*"It's nothing serious—I just feel run down.
And I'm not eating."*

*"She hasn't eaten a proper meal
since she caught mumps."*

What can you offer, besides sympathy?

There are any number of reasons why a person may be off his food. It may be as serious as surgical recovery, it may be nothing more than recuperating after the 'flu.

Whatever the cause, the problem is the same: how to provide the body with nourishment it needs, when the food which provides that nourishment remains uneaten.

That's where you can help, by

recommending Complan.

A complete food drink that contains all the nourishment of a light, balanced meal yet is easy to digest. And because

Complan now comes in chocolate, butterscotch and strawberry flavours, as well as original plain, it's as perfect a drink for a child as it is for an adult.

So you can recommend it to anyone.

Complan

Bought for its goodness.
Drunk for its taste.

As a fast acting diuretic
Burinex^{*} K
is unbeatable...

as a potassium
supplement it's
unforgettable

Your patients rarely forget to take their 'water pill' but all too frequently fail to take their potassium supplement if you prescribe it separately.¹ Burinex K solves this problem because Burinex the 'most effective natriuretic agent'² 'coats' the potassium core - to make it truly unforgettable. In addition - because of the shape and size - it's easier to swallow than the most commonly used potassium supplement alone.³

Burinex K in CCF
right from the start

1. Brit. Med. J., 618, 2, 1977

2. Acta med. scand., 119, 193, 1973

3. J. Int. Res., 104, 3, 1975

Burinex (bumetanide) is a potent short-acting diuretic indicated in the treatment of oedema. Available as Burinex Tablets (1mg and 5 mg), Burinex Injection (4 ml and 25 ml ampoules; each ml contains 0.25 mg bumetanide) and Burinex K (0.5 mg bumetanide and 7.7 mmol slow release KCl).

Dosage: oral and parenteral normally 1 mg. Higher doses may be used in resistant oedema, for long-term maintenance therapy of CCF, Burinex K is usually given as 2 tablets O.M. **Contra-indications:** Hepatic coma and severe electrolyte disturbances. Burinex K should not be used with potassium sparing agents. **Adverse reactions:** Occasional skin rashes and minor gastric upset. **Precautions:** Burinex may potentiate antihypertensive therapy and rarely, may affect carbohydrate metabolism. Periodic electrolyte checks are advisable on long-term therapy. Burinex K should be stopped immediately if signs or symptoms of bowel ulceration appear.
