Schiller's world-wide success rests on two unique developments

1.

The Minigraph MG-1.

The electrocardiograph for instant diagnosis and medical records. A featherweight of 790 g.

2.

The Miniscope MS-2.

Electrocardioscope and pulse reading instrument. Displays results within a second, reads at a glance. A featherweight of 650 g.

Schiller's mini ECG and ECS are meeting a widely felt demand in hospitals as well as in private practice, in emergency wards, during home visits and in ambulances. The electrode tripod at the back of the instruments is applied directly to the thorax and permits instant diagnosis. In addition, all classical derivations are possible by means of a five-core cable.

The Minigraph MG-1 is a high-performance electrocardiograph which because of its small size fits in any doctor's bag. The Miniscope MS-2 is ideally suited

for instant diagnostication and monitoring of the heart function. A microprocessor calculates the pulse rate after each heartbeat («beat-by-beat» method), which makes it possible to detect heart dysrhythmia in a minimum of time.

MG-1 and MS-2 are independent of mains power and deliberately built to extremely rugged high-quality design standards. Their price is on a par with their small size (45 mm by 110 mm by 130 mm or 155 mm, respectively), in other words, it is astonishingly low.

ANNOUNCING THE FIRST AMIDINO-PENICILLIN

The introduction of SELEXID (mecillinam), the first amidino-penicillin, represents a new chapter in the history of antibiotics.*

Extensive research by chemists and microbiologists has resulted in the development of SELEXID, the first radically new derivative of 6-APA in a decade.

The chemical differences from other beta-lactam antibiotics have far reaching clinical consequences. SELEXID acts in a unique way on the cell wall thus reducing the chance of cross-resistance and often giving synergistic action with the penicillins and cephalosporins.

SELEXID exhibits high activity against certain Gram-negative bacteria and in vitro studies have shown it to be up to 40 times more active than ampicillin against E.coli, Klebsiella and Salmonella species.

SELEXID is indicated for infections caused by sensitive Gram-negative organisms, in particular, urinary tract infections and Salmonellosis. SELEXID can be advantageously considered for use with those antibiotics where synergism has been demonstrated.

SELEXID

A totally new antibiotic

Presentation: White film coated tablets containing 200 mg pivmecillinam hydrochloride. *Oral dose:* Range from 200 mg 8 hourly to 400 mg 6 hourly for urinary tract infections and from 1.2-2.4 g daily for salmonellosis. Tablets should be taken with food. *Contra-indications:* Penicillin or cephalosporin hypersensitivity. *Precautions Adverse Reactions:* In accordance with normal practice Selexid should be avoided in the 1st trimester of pregnancy. Dosage may need modification when renal function is impaired. Routine monitoring of liver and renal function advisable with prolonged therapy. Gastro-intestinal upset, rash, and anaphylaxis may occur. Product Licence No. 0043/0048* Selexid is a trade mark.
