

NATRILIX®

indapamide

a primary antihypertensive agent

Natrilix offers a simple, effective means of controlling blood pressure both in newly diagnosed and in poorly controlled patients with mild to moderate hypertension

Prescribing information

Presentation

Pink biconvex sugar-coated tablets each containing 2.5 mg indapamide hemihydrate.

Uses

For the treatment of hypertension.

Dosage and administration

Adults

The dosage is one tablet daily to be taken in the morning.

Children

There is no experience of the use of this drug in children.

Contra-indications, warning, etc.

There are no absolute contra-indications to the use of Natrilix but caution should be exercised when prescribing it in cases of severe renal or hepatic impairment. As with all new drugs, the administration of Natrilix should be avoided during pregnancy although no teratological effects have been seen in animals. At doses higher than that recommended, Natrilix has a diuretic effect, therefore it is not recommended to prescribe it with a diuretic agent which may cause hypokalaemia. Also, slight weight loss has been reported in some patients taking Natrilix. Reported side effects have included nausea and headache,

but they are generally uncommon and mild in nature.

Serum urate levels may rise slightly but there is no evidence that glucose tolerance is adversely affected.

Box of 30 tablets.

Product licence number 0093/0022.

NATRILIX is available as: FLUDEX® in Africa, Belgium, France, Holland, Portugal, Switzerland.

NATRILIX® in English speaking Countries of Africa, Brazil, Central America, Germany, Ireland, Italy, Middle East, South East Asia, United Kingdom.

TERTENSIF® in Spain.

NATRIX® in Korea.

MARITAL PATHOLOGY

Divorce is becoming increasingly common: at current rates about six million people in Britain will divorce before the end of the century. Every doctor and health worker will have to deal with the diverse effects of marital unhappiness. This book discusses clearly and concisely reasons for marital misery, its effects on the health of the family, and how counsellors can help. This book will benefit all who have to deal with these problems.

HOW TO DO IT

Every doctor knows the sinking sensation induced by waiting one's turn for an examination viva and the social anxieties of changing jobs. The misery of first night nerves does not, however, disappear with time: each decade brings new challenges. On these occasions—chairing a committee, giving evidence in court, appearing on television—practical tips can be enormously helpful. The same is true of the many skills not taught in medical school—how to lecture, referee papers, edit, or use a library. All these and many more nuggets of down-to-earth advice have been collected from past issues of the *BMJ* to form a compendium for the novice—whatever his or her age or seniority.

MEDICINE IN OLD AGE

The series of twenty two articles published in the *British Medical Journal* have been collected in book form as a convenient source of reference for general practitioners. The emphasis is on remedial mechanisms, and the use that can be made of psychogeriatric and social services in keeping the elderly healthy and relatively independent members of the community.

Lopresor[®] 100

metoprolol tartrate

simply right for
hypertension

Efficacy-Tolerability- β_1 Selectivity-Simple dosage regime:
the essentials of Lopresor simplicity
in hypertension

Geigy

Lopresor Presentation: Pale red, round film-coated tablets, each containing 50mg. Lopresor is also available as light blue round tablets, each containing 100mg. **Indications:** Hypertension and angina pectoris. **Dosage and Administration:** *Hypertension:* Initially, one 100mg tablet morning and evening should be given. The dosage may be increased to 2 x 100mg twice daily according to response. Most patients will respond to two 100mg tablets twice daily or less, particularly if Lopresor is used in conjunction with a diuretic such as chlorthalidone or a vasodilator such as hydralazine. The total daily dose of Lopresor may be given as a single dose if required. *Angina pectoris:* One or two x 50mg tablets twice or three times daily. **Side-effects:** Slight gastro-intestinal discomfort and disturbance of sleep pattern occasionally occur. There have been reports of skin rashes and/or dry eyes associated with the use of beta-adrenoceptor blocking drugs. The reported incidence is small and in most cases the symptoms have cleared when treatment was withdrawn. Discontinuance of the beta-adrenoceptor blocking drugs should be considered if any such reaction is not otherwise explicable. Cessation of therapy with a beta-blocker should be gradual. **Precautions:** Cardiac failure must be controlled before initiating Lopresor therapy. Caution should be observed when treating asthmatics. It may be necessary to adjust the dosage of antidiabetic medication. As with other drugs, beta-blockers should only be used during pregnancy if there are compelling reasons. **Contra-indications:** Atrioventricular block, digitalis-refractory heart failure, severe bradycardia and cardiogenic shock. **Packs:** Lopresor 100mg (PL0001/0066) Packs of 100 tablets £8.97. Calendar packs of 56 tablets £5.03. Lopresor 50mg (PL0001/0065) Packs of 100 tablets £4.83. Further information is available on request from Geigy Pharmaceuticals, Horsham, West Sussex.
