A new dimension
in blood glucose
testing

New **BM-Test- Glycémie 20-800**

BM-Test Glycémie 20-800
is marketed in some countries as
Haemo-Glukotest® 20-800 or
Chemstrip® bG

Test strip for the semiquantitative determination
of blood glucose in the range of
20-800 mg/100 ml (1-44 mmol/l)

Main features:

- The combination of two test patches on one test strip ensures a wide range of response and reliable results - **no meter required**
- Readily identifiable comparison colours for
20 40 80 120 180 240 400 800 mg/100 ml
1 2 4 7 10 13 22 44 mmol/l
- Simple to use - no need to rinse with water
- Stable at room temperature
- A long shelf-life - even after vial has been opened

Stable reaction colour - small timing errors do not
lead to large reading errors

Out of the shadows of depression
and irrational fear with

Anafranil[®] 10mg
(clomipramine hydrochloride)

Geigy

Anafranil (clomipramine hydrochloride). **Dosage:** Depression – 30–50mg per day. In severe cases increase to 75mg or higher if necessary. Phobic/Obsessional States – generally higher dosage – build up to 100–150mg per day. **Contra-indications:** 1) Anafranil is contra-indicated in conjunction with, or within 14 days of treatment with a monoamine oxidase inhibitor. 2) In existing liver damage. 3) In cardiac/circulatory failure or following a recent myocardial infarction. **Precautions:** Caution is necessary in ischaemic heart disease, glaucoma, and retention of urine. Great caution in patients with epilepsy. Anafranil may antagonise the action of certain antihypertensive drugs, and may potentiate the cardiovascular action of noradrenaline and adrenaline. As with other drugs, avoid using during the first trimester of pregnancy if possible. **Side effects:** Dry mouth, sweating, difficulty with accommodation, constipation, disturbance of micturition, tachycardia. Less commonly tremor, ataxia, orthostatic hypotension and vertigo. More rarely anxiety, agitation, fatigue, drowsiness, confusion, insomnia and headache. Epileptiform seizures have occurred in a small number of patients. Symptomless hypothermia and allergic skin reactions are extremely rare. Interference with sexual function, particularly ejaculation, may be encountered. Agranulocytosis has occasionally occurred in patients on tricyclic antidepressants – routine blood counts are advised during treatment with Anafranil. **Availability:** Two-tone yellow/caramel capsules of 10mg (PL0001/0037) £3.10 per 100. Two-tone orange/caramel capsules of 25mg (PL0001/5000) £6.11 per 100. Two-tone blue/caramel capsules of 50mg (PL0001/0068) £11.63 per 100. Orange flavoured and coloured syrup containing 25mg of Anafranil in 5ml (PL0001/5001) £5.55 per 150ml bottle. Full prescribing information is available on request from Geigy Pharmaceuticals, Horsham, West Sussex.
