Hard gelatin capsules containing 2 mg loperamide hydrochloride and syrup containing 1 mg loperamide hydrochloride per 5 ml.

Indications :

Imodium* is indicated for the symptomatic control of acute diarrhoea of any aetiology.

Contra-indications and warnings etc. :

There are no specific contra-indications to Imodium*. Studies in animals have shown no abnormal teratogenic effects, however the use of loperamide during pregnancy is subject to the usual precautions. In trials, no side effects have been reported that can reliably be distinguished from the symptoms of the gastro-intestinal disorder being treated. As persistent diarrhoea can be an indicator of potentially more serious conditions, Imodium* should not be used for prolonged periods until the underlying cause of the diarrhoea has been investigated.

Dosage and Administration :

Acute Diarrhoea - Adults : Two capsules initially, followed by one capsule after every loose stool. The usual dosage is 3 to 4 capsules a day, the maximum daily dose should not exceed 8 capsules. **Children :** 4 to 8 years : Syrup 5 ml four times daily until diarrhoea is controlled. In children under 8 years, further investigation may be necessary if diarrhoea has not responded to three days' treatment. 9 to 12 years : Syrup, 10 ml (or 1 capsule) four times daily until diarrhoea is controlled.
