

# Imodium

TRADE MARK

(loperamide hydrochloride)

**symbol of  
accuracy  
in acute diarrhoea**

Imodium's specific action controls diarrhoea, relieving pain and abdominal cramps rapidly and effectively.

A tailored dosage regime means that patients only take Imodium when they really need it, minimising the risk of constipation and encouraging economy of medication. Patients will find Imodium capsules easy to take and the blister pack of just twelve capsules is convenient to carry throughout the working day.

Further information is available from :

**JANSSEN PHARMACEUTICA**  
2340 Beerse, Belgium

or

**JANSSEN PHARMACEUTICAL LTD.**  
Marlow, Bucks. SL7 1ET.

**Presentation :**

Hard gelatin capsules containing 2 mg loperamide hydrochloride and syrup containing 1 mg loperamide hydrochloride per 5 ml.

**Indications :**

Imodium\* is indicated for the symptomatic control of acute diarrhoea of any aetiology.

**Contra-indications and warnings etc. :**

There are no specific contraindications to Imodium\*. Studies in animals have shown no abnormal teratogenic effects, however the use of loperamide during pregnancy is subject to the usual precautions. In trials, no side effects have been reported that can reliably be distinguished from the symptoms of the gastro-intestinal disorder being treated. As persistent diarrhoea can be an indicator of potentially more serious conditions, Imodium\* should not be used for prolonged periods until the underlying cause of the diarrhoea has been investigated.

**Dosage and Administration :**

Acute Diarrhoea. *Adults* : Two capsules initially, followed by one capsule after every loose stool. The usual dosage is 3 to 4 capsules a day, the maximum daily dose should not exceed 8 capsules. *Children* : 4 to 8 years : Syrup 5 ml four times daily until diarrhoea is controlled. In children under 8 years, further investigation may be necessary if diarrhoea has not responded to three days' treatment. 9 to 12 years : Syrup 10 ml (or 1 capsule) four times daily until diarrhoea is controlled.

**Basic NHS Cost :**

12 capsules (ex 250 pack) 104p (correct at time of printing)

**Product Licence Numbers :**

# ABC OF EAR NOSE AND THROAT

Diseases of the ear, nose and throat account for a substantial proportion of all consultations in general practice; they cause time off work and, particularly in children, a great deal of misery and discomfort.

Mr. Harold Ludman's illustrated articles on the common problems of ENT provide the busy clinician with a practical and reliable guide to their assessment and management.

These articles have been collected together in book form in the same format as they appeared in the BMJ.

Price: Inland £3.50; Overseas US\$16.00\*  
(Inland £3.00; Overseas US\$14.50\* for

# Today's antibacterial

Success 9 times out of ten in chest infections would be hard to beat. It is this order of success, confirmed in worldwide clinical studies involving over 8,500 patients, that has helped thousands of doctors to decide that **Septin** is today's antibacterial. With over 2,500 published reports and more than 250 million prescriptions written worldwide, is it any wonder that **Septin** is Britain's No. 1 branded antibacterial?

#### PRESCRIBING INFORMATION

**Indications** Sensitive bacterial infections of the lower respiratory, urinary and genital tracts, sinusitis, otitis media, skin infections, septicaemia, typhoid and paratyphoid fevers, and other infections caused by sensitive organisms.

**Dosage** **Septin Forte** Tablets. Adults and children over 12 years: 1 forte tablet twice daily. Maximum dosage for particularly severe infections 1½ forte tablets twice daily. In acute infections **Septin** should be given for a minimum of 5 days or until the patient has been symptom-free for 2 days.

**Contra-indications** **Septin** is contra-indicated in patients with marked liver parenchymal damage, blood dyscrasias or severe renal insufficiency. **Septin** should not be given to patients hypersensitive to sulphonamides or co-trimoxazole; should not be given during pregnancy or to neonates.

**Precautions** In cases of renal impairment a reduced dosage is indicated and an adequate urinary output should be maintained. Regular blood counts are necessary whenever long-term therapy is used. Caution is advised in patients with folate deficiency. Care should be taken when giving **Septin** to patients receiving oral anticoagulants of the coumarin group, pyrimethamine or sulphonylureas.

**Adverse Reactions** Occasionally, nausea, vomiting, glossitis and skin rashes may occur with normal doses and, very rarely, haematological reactions.

**Presentation** **Septin Forte** Tablets each contain 160mg Trimethoprim B.P. and 800mg Sulphamethoxazole B.P.

# TODAY'S TREATMENT/4

The drugs that we use today are increasingly potent, dangerous, and expensive, and every doctor should have some understanding of clinical pharmacology and drug-induced diseases. Both these subjects, which have been badly taught in medical schools, are covered comprehensively in this new book, which consists of articles taken from the *BMJ*. Also included are articles that provide a clear and up-to-the-minute introduction to anaesthetics.

**Price: Inland £4.50;  
Overseas US\$20.50\*

*Slowly, surely...*

**Lopresor<sup>®</sup> SR**  
metoprolol tartrate

*The 24 hour beta-blocker*

**Presentation** Tablets containing 200mg metoprolol tartrate in a sustained release formulation. **Indications** Hypertension and angina pectoris. **Dosage** Initially one tablet daily. Most patients respond satisfactorily within 14 days to one or two tablets once daily. **Side-effects** Slight gastro-intestinal discomfort and disturbance of sleep pattern. **Precautions** Avoid in patients with cardiac decompensation unless adequately controlled by digitalis and/or diuretics. Care in patients with chronic obstructive pulmonary disease, where dosage of bronchodilator may require adjustment. It may be necessary to adjust the dosage of the hypoglycaemic agent in labile and insulin dependent diabetics. Lopresor SR therapy should be brought to the attention of the anaesthetist prior to general anaesthesia. Occasionally patients taking beta-blocking drugs develop skin rash and/or dry eyes; where such a reaction is otherwise inexplicable, beta-blocker therapy should be gradually withdrawn. Withdrawal of therapy with Lopresor SR should be effected gradually, over 8-10 days. Use in pregnancy only when there are compelling reasons; if used during pregnancy or lactation special attention should be paid to foetus, neonate or infant for undesirable effects of the drug's beta-blocking action. **Contra-indications** Atrioventricular block of second or third degree, heart failure refractory to digitalis, severe bradycardia, cardiogenic shock. **Packs** Lopresor SR tablets in calendar packs of 28 tablets (2 x 14 tablet foils) PL0001/0081 basic NHS price £7.20. \* denotes registered trademark. Full prescribing information is available on request from Geigy Pharmaceuticals, Horsham, West Sussex.
