

ABC OF DIABETES

Innovations in the treatment of diabetes have increased rapidly in the last decade: self measurement of blood glucose, intravenous infusions and intramuscular insulin for diabetic emergencies, continuous subcutaneous insulin infusions, and light coagulation for diabetic retinopathy have all helped to improve the outlook for diabetics. Dr Peter Watkins' articles in the *BMJ*, now collected together in book form, set these advances in their clinical context and provide a practical guide to the management of diabetes for the non-specialist, both doctor and nurse.
