ALCOHOL PROBLEMS

In recent years alcohol problems have increased dramatically and the thinking on them has undergone a revolution. Alcohol Problems brings together two series of articles published in the *BMJ* — the ABC of Alcohol, with its emphasis on straightforward advice for the clinician, and Alcohol and Alcoholism, Dr Richard Smith's more discursive survey of current thinking and controversies. Together they cover both the clinical aspects of managing alcohol problems and the social and political factors that surround them.

INSTITUTE OF OPHTHALMOLOGY University of London ANNUAL COURSE FOR DIPLOMA IN COMMUNITY EYE HEALTH (15th June – 25th November 1983)

This multidisciplinary course will be held at the Department of Preventive Ophthalmology with a full-time schedule of lectures, group seminars and practical exercises in relevant aspects of many disciplines that are required for the design, implementation and assessment of rural eye services and programmes for prevention of blindness. The course will provide training in relevant ophthalmological, nutritional, microbiological, pathological, epidemiological, environmental, entomological, demographic, social, behavioural, educational and managerial studies. The syllabus will include detailed discussion of the major blinding diseases with emphasis on the practical analyses of the pathways leading to avoidable blindness from each of these type of disease.

This course is intended primarily for medical graduates with training in Ophthalmology, Paediatrics or Community Health. However, other graduates with a science or other degree relevant to health fields such as nutrition, health administration etc. will also be considered.

Fees: £2,500

All enquiries and applications should be made to:
The Dean, Institute of Ophthalmology, Cayton Street,
London, EC1. Tel: 253 3411, Ext. 494

Septtrin Assurance

Prescribing Information

Indications Sensitive bacterial infections of the lower respiratory, urinary and genital tracts, sinusitis, otitis media, skin infections, septicaemia, typhoid and paratyphoid fevers, and other infections caused by sensitive organisms.

Dosage Septtrin Forte Tablets. Adults and children over 12 years: 1 forte tablet twice daily. Maximum dosage for particularly severe infections 1½ forte tablets twice daily. In acute infections Septtrin should be given for a minimum of five days or until the patient has been symptom-free for two days.

Contra-indications Septtrin is contra-indicated in

patients with marked liver parenchymal damage, blood dyscrasias or severe renal insufficiency. Septtrin should not be given to patients hypersensitive to sulphonamides, trimethoprim or co-trimoxazole; should not be given during pregnancy or to neonates.

Precautions In renal impairment a reduced dosage is indicated and an adequate urinary output should be maintained. Regular blood counts are necessary whenever long-term therapy is used. Caution is advised in patients with folate deficiency. Care should be taken when giving Septtrin to patients receiving oral anticoagulants of the coumarin group, pyrimethamine or sulphonylureas.

Adverse Reactions Occasionally, nausea, vomiting, glossitis and skin rashes may occur with normal doses and, very rarely, haematological reactions.

Presentation Septtrin Forte Tablets each contain 160 mg Trimethoprim BP and 800 mg Sulphamethoxazole BP. PL3/0121.

Septtrin* Forte 1b.d. co-trimoxazole

HISTORY OF THE BRITISH MEDICAL ASSOCIATION

Volume II 1932-1981

by

ELSTON GREY-TURNER

CBE, MC, TD, MD, MRCS, LRCP
(Secretary, BMA, 1976-79)

and

F M SUTHERLAND

MA, FLA
(Librarian, BMA, 1961-81)

A companion volume to the history of the BMA's first hundred years published in 1932, *The History of the BMA Volume II* covers the next 50 years. The authors, Dr E Grey-Turner, former secretary of the BMA, and Mr F Sutherland, former librarian of the BMA, describe the change in the BMA's role overseas, the baffling new ethical problems, and the expansion of the BMA's publishing activities. Their book is packed with fascinating information. Why did the BMA threaten the *Sunday Pictorial* at the beginning of the second world war? What did the presidents of the royal colleges say in their famous letter to Aneurin Bevan? What was the biggest award ever made to doctors by a Review Body? All these questions, and many more, are answered in this book.

ABC OF DIABETES

Innovations in the treatment of diabetes have increased rapidly in the last decade: self measurement of blood glucose, intravenous infusions and intramuscular insulin for diabetic emergencies, continuous subcutaneous insulin infusions, and light coagulation for diabetic retinopathy have all helped to improve the outlook for diabetics. Dr Peter Watkins' articles in the *BMJ*, now collected together in book form, set these advances in their clinical context and provide a practical guide to the management of diabetes for the non-specialist, both doctor and nurse.

Take two

Voltarol[®] diclofenac sodium for osteoarthritis

Presentation Tablets of 25 and 50mg diclofenac sodium; suppositories of 100mg diclofenac sodium. **Indications** Rheumatoid arthritis, osteoarthritis, low back pain and other acute musculo-skeletal disorders, ankylosing spondylitis, acute gout. **Dosage** Tablets: 75-150mg daily in two or three divided doses. **Suppositories**: one daily, usually at night. In more severe cases, combined therapy with tablets is recommended (daily dose should not exceed 150mg). **Side-effects** Transient epigastric pain, nausea and diarrhoea, headache and slight dizziness have been reported, as occasionally have skin rash, peripheral oedema and abnormalities of serum transaminases and (very rarely) peptic ulcer and haematemesis or melaena. Local reactions to suppositories include itching, burning and increased frequency of bowel movement. **Precautions** Do not prescribe during pregnancy unless there are compelling reasons. Patients with a history of peptic ulcer, haematemesis or melaena, or with severe hepatic or renal insufficiency, should be kept under close surveillance. Voltarol has been reported to depress salicylate levels and vice versa: the clinical relevance of this is not yet clear. Use suppositories only with caution in patients with painful or irritable ano-rectal conditions. **Contra-indications** Peptic ulceration; patients in whom attacks of asthma, urticaria or acute rhinitis are precipitated by aspirin or other NSAIs. **Packs** Tablets 25mg (PL0001/0036) in packs of 100, basic NHS price £9.54; tablets 50mg (PL0001/0082) in packs of 100, £18.55; suppositories 100mg (PL0001/0083) in packs of 10, £3.16. Full prescribing information is available from Geigy Pharmaceuticals, Horsham, West Sussex.
