

Nizoral[®]

ketoconazole

The first
oral anti-fungal
effective against
all pathogenic
fungi

dosage:

vaginal candidosis:	all other superficial and systemic fungal infections:
2 tablets once daily (with food) for 5 days	1 tablet daily (with food) until complete symptomatic and mycological cure is obtained

PRESCRIBING INFORMATION

Presentation: white, flat, half scored uncoated tablets marked "Janssen" on one side and k/200 on the reverse. Each tablet contains 200 mg ketoconazole. **Uses:** Nizoral is an orally active antimycotic for the treatment in adults of vaginal candidosis, superficial and systemic mycoses including dermatophyte and yeast infections of the skin, hair and nails, yeast infections of the mouth and G.I. tract. Also maintenance treatment of systemic mycoses and chronic mucocutaneous candidosis and prophylaxis in "at risk" patients. In children, systemic mycoses and severe local infections where previous topical treatment has failed. **Side-effects, precautions, contra-indications:** contra-indicated in pregnancy. For maximal absorption Nizoral should be taken with meals. The use of agents which reduce gastric acidity (anti cholinergic drugs, antacids, H₂ blockers) should be avoided and, if indicated, such drugs should be taken not less than two hours after Nizoral. Nausea, skin rash, headache and pruritus may occasionally be observed. Alterations in liver function tests have occurred in patients on ketoconazole, these changes may be transient. Cases of hepatitis have been reported with an incidence of about 1 per 10 000 patients. Some of these may represent an idiosyncratic adverse reaction to the drug. This should be borne in mind in patients on long term therapy. If a patient develops jaundice or any symptoms suggestive of hepatitis, treatment with ketoconazole should be stopped.

Not all indications are as yet approved in all countries.

INTERNAL MEDICINE

Jay H. Stein, M.D., Editor-in Chief

Every thirty years or so, a new textbook emerges that, ultimately, defines the practice of medicine for its generation. Osler's *Textbook of Medicine* at the turn of the century; Cecil's *Textbook of Medicine* in the late twenties; and Harrison's *Principles of Internal Medicine* in the fifties—each of these remarkable texts set a standard of excellence for the study and practice of medicine.

Today, in the same tradition, Stein's *Internal Medicine* takes its place as the first major new textbook in more than thirty years. It is the book that reflects the practice of internal medicine in the 1980's.

Single Volume 0-316-81231-5, \$65.00

The standard of excellence,
now in a new edition.

Harrison's Principles of Internal Medicine 10/E

For over thirty years Harrison's *Principles of Internal Medicine* has been widely recognised and accepted as the leading reference in internal medicine. Now a new tenth edition maintains those qualities of scholarship, clarity and comprehensiveness the lecturers, doctors and students have come to expect from Harrison, but it is a major, thorough revision.

Every chapter has been completely revised or rewritten, and individual topics have been brought up-to-date to reflect the latest clinical research and information. This edition includes for the first time, two comprehensive chapters on geriatric medicine, while an already strong neurology section takes into account the many advances in the field and provides a focus on neurology in the 1980's. And, in bringing to clinical relevance new developments in the basic sciences, the tenth edition accomplishes the most extensive update of the biochemistry of disease in many years. Of course, it also includes full-colour illustrations, index and completely up-to-date references.

Harrison's *Principles of Internal Medicine 10/E* remains the reference that physicians and students can depend upon for immediate, accurate and up-to-date help in solving the full range of clinical problems.

Emergency Medicine

a major new journal to be published
quarterly from January 1984 by
Blackwell Scientific Publications

Edited by A.D. Redmond MD, MRCP, FRCS
Department of Accident and Emergency
Medicine, Stockport Infirmary

This new publication will cover all aspects of Accident and Emergency Medicine, with particular emphasis on the resuscitation, diagnosis and management of the acutely ill. It will publish original papers and review articles; short communications and case reports will be accepted if sufficiently noteworthy.

Manuscripts for consideration should be sent to the Editor, Dr. A.D. Redmond, Blackwell Scientific Publications, 9 Forrest Road, Edinburgh EH1 2QH.

Wellcome purified insulins, Neusulin, Neuphane and Neulente cover the needs of the vast majority of diabetics providing smooth, prolonged and cost-effective control.

Wellcome – committed always to the service of diabetics and diabeticians – will also continue to provide the patient and doctor service items for which the company is well-known.

Neusulin

Neutral Insulin Injection BP (purified) Wellcome

Neuphane

Isophane Insulin Injection BP (purified) Wellcome

Neulente

Insulin Zinc Suspension BP (purified) Wellcome

THE WELLCOME CONTRIBUTION TO OPTIMAL CONTROL

Prescribing Information

Uses Management of Diabetes mellitus.

Dosage and administration Dosage to be determined by the physician. Site of injection to be changed according to suitable routine. Avoid unintentional intravascular injection.

Neusulin, Soluble Insulin: Administered s.c. or i.m. or i.v. S.c., onset of action within 30-60 minutes, duration 6-8 hours. I.m., onset is faster and duration is shorter. I.v. administration has fastest onset and shortest duration, usually reserved for investigational use or diabetic ketoacidosis.

Neuphane, Neulente: Administered s.c. or i.m. *Not to be given i.v.* S.c., onset of action within 2 hours, duration (Neuphane) 20-24 hours, duration (Neulente) 24-28 hours. I.m., onset is faster and duration shorter. Mix well by gently inverting the vial several times before use.

Mixing: Neusulin may be mixed in the syringe, on medical advice, with Neuphane or Neulente if required, *provided the mixture is injected immediately.* However, it is preferable to avoid mixing insulins of different pH. See data sheet for procedure.

Contra-indications Hypoglycaemia.

Precautions Dosage requirement may alter with variation of lifestyle, infection, pregnancy and with change in species, type or purity of insulin.

Hypo- and hyperglycaemia may be enhanced by drugs which interact with insulin. Beta-blockers may affect insulin requirement and mask hypoglycaemia. MAO inhibitors may potentiate insulin.

Side-effects Hypoglycaemia. Possible altered visual refraction. Transient local reactions at the site of injection.

Storage Store at 2-8°C. *Do not freeze.* Avoid direct sunlight.

Presentation Neusulin, Neuphane and Neulente are available in strengths of 40 and 80 units per ml in vials of 10 ml.

Basic NHS costs

Neusulin		Neuphane	
40 units/ml	PL3/0137, £2.31	40 units/ml	PL3/0139 £2.31
80 units/ml	PL3/0138 £4.14	80 units/ml	PL3/0140 £4.47
Neulente			
40 units/ml	PL3/0141 £2.28		
80 units/ml	PL3/0142 £3.90

ALCOHOL PROBLEMS

In recent years alcohol problems have increased dramatically and the thinking on them has undergone a revolution. *Alcohol Problems* brings together two series of articles published in the *BMJ*—the ABC of Alcohol, with its emphasis on straightforward advice for the clinician, and *Alcohol and Alcoholism*, Dr Richard Smith's more discursive survey of current thinking and controversies. Together they cover both the clinical aspects of managing alcohol problems and the social and political factors that surround them.

HISTORY OF THE BRITISH MEDICAL ASSOCIATION

Volume II 1932-1981

by

ELSTON GREY-TURNER
CBE, MC, TD, MD, MRCS, LRCP
(Secretary, BMA, 1976-79)

and

F M SUTHERLAND
MA, FLA
(Librarian, BMA, 1961-81)

A companion volume to the history of the BMA's first hundred years published in 1932, *The History of the BMA Volume II* covers the next 50 years. The authors, Dr E Grey-Turner, former secretary of the BMA, and Mr F Sutherland, former librarian of the BMA, describe the change in the BMA's role overseas, the baffling new ethical problems, and the expansion of the BMA's publishing activities. Their book is packed with fascinating information. Why did the BMA threaten the *Sunday Pictorial* at the beginning of the second world war? What did the presidents of the royal colleges say in their famous letter to Aneurin Bevan? What was the biggest award ever made to doctors by a Review Body? All these questions, and many more, are answered in this book.

The logical choice

Select the correct figure from the six numbered ones

Voltarol[®] diclofenac sodium for osteoarthritis

Presentation Tablets of 25 and 50mg diclofenac sodium; suppositories of 100mg diclofenac sodium. **Indications** Rheumatoid arthritis, osteoarthritis, low back pain and other acute musculo-skeletal disorders, ankylosing spondylitis, acute gout. **Dosage** Tablets: 75-150mg daily in two or three divided doses. Suppositories: one daily, usually at night. In more severe cases, combined therapy with tablets is recommended (daily dose should not exceed 150mg). **Side-effects** Transient epigastric pain, nausea and diarrhoea, headache and slight dizziness have been reported, as occasionally have skin rash, peripheral oedema and abnormalities of serum transaminases and (very rarely) peptic ulcer and haematemesis or melaena. Local reactions to suppositories include itching, burning and increased frequency of bowel movement. **Precautions** Do not prescribe during pregnancy unless there are compelling reasons. Patients with a history of peptic ulcer, haematemesis or melaena, or with severe hepatic or renal insufficiency, should be kept under close surveillance. Voltarol has been reported to depress salicylate levels and vice versa: the clinical relevance of this is not yet clear. Use suppositories only with caution in patients with painful or irritable ano-rectal conditions. **Contra-indications** Peptic ulceration; patients in whom attacks of asthma, urticaria or acute rhinitis are precipitated by aspirin or other NSAIs. **Packs** Tablets 25mg (PL0001/0036) in packs of 100, basic NHS price £9.54; tablets 50mg (PL0001/0082) in packs of 100, £18.55; suppositories 100mg (PL0001/0083) in packs of 10, £3.16. Full prescribing information is available from Geigy Pharmaceuticals, Horsham, West Sussex.
