

THE KEYNES PRESS

A new series of limited editions
of medical classics, published under an imprint
named after Sir Geoffrey Keynes

Brought to light by a relative, Urban Marks's diary has been fascinating readers of the *BMJ* since we began publishing extracts 18 months ago. Spanning as his career did the introduction of Lloyd George's national insurance scheme and of the National Health Service – as well as two world wars – Urban Marks's accounts have an obvious interest for modern readers, who have had little experience of practice under any conditions other than the NHS. But there is also a touching naivete to his record of his relatives, his fellow medical students and family doctors, not to mention old style politics at the BMA and elsewhere, leading some readers to compare him to Mr Pooter of the *Diary of a Nobody*.

Extracts from Marks's diaries have now been collected into a book, entitled *A Varied Life: Memoirs of a Swansea GP*. Published by the Keynes Press at £35, it continues the high standards of this

imprint, being designed by Sebastian Carter and printed in Monotype Bembo. The introduction, by Dr Andrew Smith, the third is a long established general practice at Whickham-on-Tyne, sets in perspective the changes in both practices. A feature of this edition is a specially commissioned series of vignettes and drawings by Paul Cox, a young artist whose work has regularly appeared in *The Times* and the *Listener*, who has illustrated the Folio Society's edition of the *Experiences of an Irish R.M.*, and whose recent London exhibition was a great success. Each copy of Urban Marks's *Memoirs* has a full colour frontispiece signed by the artist. Price £35, including postage. Copies may be ordered from the Publishing Manager, British Medical Journal, BMA House, Tavistock Square, London WC1P 6PB. Cheques should be made payable to the British Medical Journal.

BMA BOOKS

FROM ABC TO XYZ

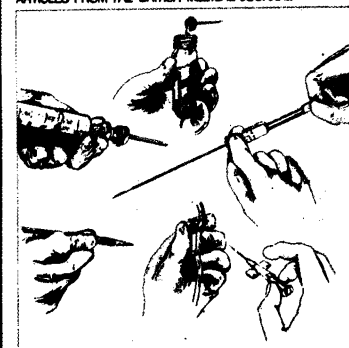

Every year the BMJ publishes between half a dozen and a dozen books, mostly comprising commissioned series of articles published in the Medical Practice and Practice Observed sections of the journal. Before publication, all these articles are revised by their authors, often in the light of correspondence in the BMJ, and each book is individually designed with a special cover and index. The reprints of the ABC series have been particularly successful, one reviewer commenting that "the clarity of thought and consistency of editing are remarkable."

LONDON SE21 7AN**

Have you had a research paper published this year?

The BUPA Medical Foundation aims to encourage the preparation and publication of papers in the U.K. on medical subjects which combine originality and literary merit. To that end, the Governors of the Foundation instituted an annual prize in 1979.

The 1984 awards will be made in April 1985 in respect of entries published during the year 1984 and will consist of at least one prize of £1,000. Other prizes, of up to that value, may be awarded if the Governors, on the advice of the Assessors, believe that the standard of entries received merits further recognition.

Entries will be eligible for consideration from registered medical practitioners in the U.K. who will not have reached the age of forty years on 31st December 1984. Entries may be submitted from those whose work has been done in collaboration, but if any co-author is not eligible, by reason of age, for consideration, account will be taken of this fact by the Assessors, in making their recommendation to the Governors.

Further details, and forms of entry, may be obtained from The Secretary, The BUPA Medical Foundation Limited, 24/27 Essex Street, London WC2R 3AX.

The closing date for entries is 21st January 1985.

FOUNDATION LIMITED**

ABC OF COMPUTING

Although computers are being widely used in medicine, their possibilities and limitations are still not clear to many potential users. This book, aimed at the non-expert, describes some of the uses of computers in medicine; because most doctors' involvement will be indirect, liaising with computer experts rather than designing systems themselves, the book concentrates on concepts rather than detailed descriptions of how computers work. It provides a useful introduction for the doctor who wants to know how computers can contribute to his practice of medicine.

a troublesome problem
in modern gynaecology

"Pill"-vaginitis

oral contraceptives create the ideal environment
for *Candida albicans* to develop

The modern approach:

Nizoral^{TRADEMARK}

ketoconazole

**just 2 oral tablets daily
with a meal**

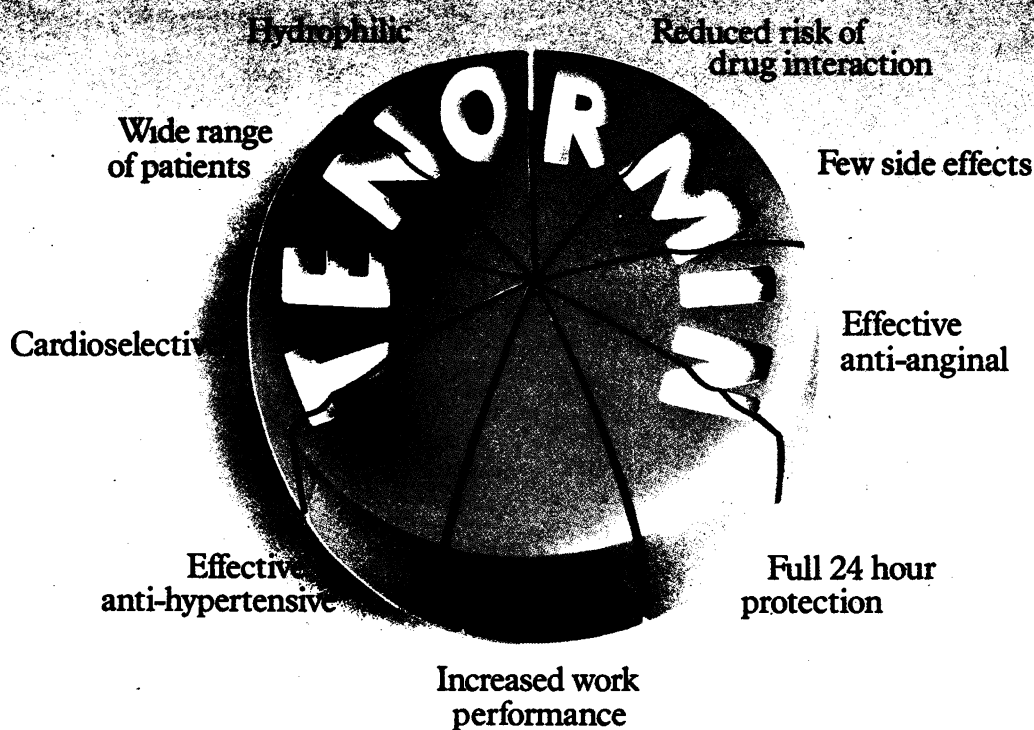

...scored uncommonly in patients on oral ketoconazole. Each tablet contains 200 mg ketoconazole. Ketoconazole is a broad-spectrum antifungal and antiparasitic agent. It is effective against a wide range of fungi, including *Candida albicans*, and is also active against some parasites. Ketoconazole is used for the treatment of systemic mycoses including dermatomycosis, candidiasis, and other fungal infections of the skin, hair, and nails, yeast infections of the mouth (thrush), and for the treatment of systemic mycoses and chronic mucocutaneous candidiasis and blastomycosis in "at risk" patients. In children: systemic mycoses and severe local infections where previous topical treatment has failed.

Side-effects, precautions, contra-indications:
contra-indicated in pregnancy. For maximal absorption Nizoral should be taken with meals. The use of agents which reduce gastric acidity (anti-cholinergic drugs, antacids, H₂-blockers) should be avoided and, if indicated, such drugs should be taken not less than two hours after Nizoral. Nausea, skin rash, headache and pruritus may occasionally be observed. Alterations in liver function tests have occurred in patients on ketoconazole, these changes may be transient. Cases of hepatitis have been reported with an incidence of about 1 per 10,000 patients. Some of these may represent an idiosyncratic adverse reaction to the drug. This should be borne in mind in patients on long-term therapy. If a patient develops jaundice or any symptoms suggestive of hepatitis, treatment with ketoconazole should be stopped. Mild asymptomatic increases of liver enzyme levels, on the other hand, do not necessitate discontinuation of the treatment. Ketoconazole, when given together with cyclosporin A results in increased blood levels of cyclosporin A. It is important that blood levels of cyclosporin A be monitored if the two drugs are given concomitantly. Ketoconazole 200 mg once daily produces a transient decrease in plasma levels of testosterone. During long term therapy at this dose, testosterone levels are usually not different from controls. In rare instances, gynaecomastia has been reported.
