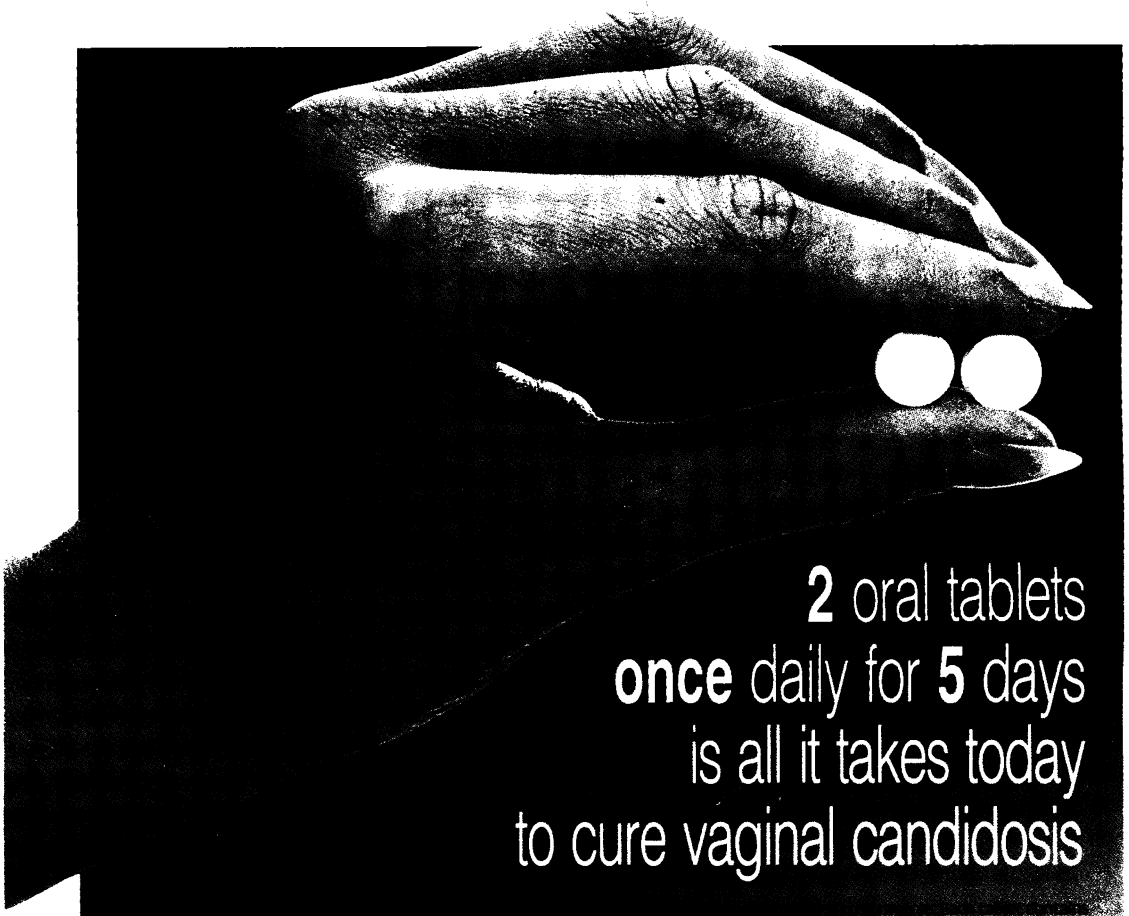
In vaginal candidosis:

TRADEMARK

ketoconazole

The elegant way to treat an inelegant problem



2 oral tablets
once daily for **5** days
is all it takes today
to cure vaginal candidosis

... which reduce gastric
... to be taken not less than
... increased blood levels of cyclosporin A. It is
... given concomitantly. **Side-effects:** nausea, skin rash,
... function tests have occurred in patients on ketoconazole;
... with an incidence of about 1 per 10,000 patients. Some of
... of the drug. This should be borne in mind in patients on long-term therapy.
... suggestive of hepatitis, treatment with ketoconazole should be stopped. Mild
... on the other hand, do not necessitate discontinuation of the treatment.
... on request.

NOT ALWAYS ON THE LEVEL

The third in the Memoir Club series of books of general interest by medical writers is *Not Always on the Level* by E J Moran Campbell, professor of medicine at McMaster University, Canada, who combines reminiscences of his Yorkshire childhood and student days in London with an account of his work in respiratory physiology and a painfully honest description of what it is like to be a manic depressive.

Price: Inland £14.95; Abroad £18.50; USA $30.00

Think about it

You make a clinical diagnosis. Do you ever consider the thought processes by which you arrived at it? Medical students and practitioners are often concerned with examples of diagnostic logic, but seldom consider them in the context of a general philosophy. Is diagnostic logic out on a limb, or is it based on the same principles as logic in general?

In *Logic in Medicine* doctors and philosophers combine to provide a coherent system of diagnostic logic with a broader view of the science and art of reasoning.

The abstract theory of theories has highly practical applications, and the authors explore the uses of computer technology and artificial intelligence systems as well as "fuzzy logic," "relevant logic," and the logic of economics and ethics. A book for all who wish to clear their minds of cant.

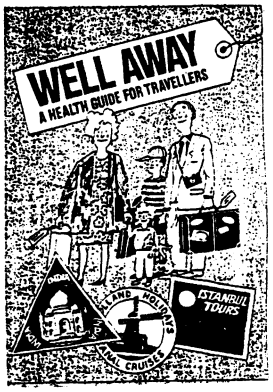
4 new books from the BMJ - published 28 March 1988



The British have been travelling overseas for centuries, but never in such enormous numbers as now. Holidaymakers from Britain between them take about 15 million trips abroad each year, and thousands more go to work, either for firms or voluntary organisations. Strange climate, customs, food, disease can all cause illness. *Well Away* advises non-medical readers on how to avoid this. Adapted by Eric Walker and Glyn Williams from their *ABC of Healthy Travel,* it gives straightforward practical advice on everything from immunisations and insurance before departure to first aid while abroad. The one guidebook no traveller can afford to be without.

Price: Inland £4.95; Abroad £6.00; USA$9.00

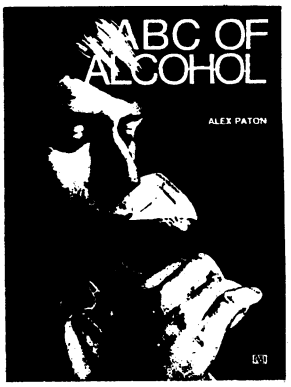
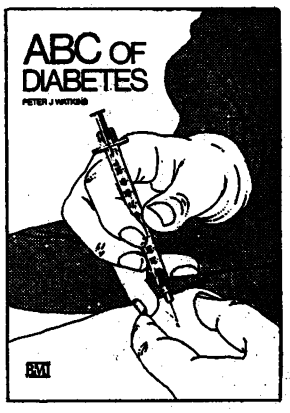
The extraordinary technical developments in molecular biology over the past few years, and the equally rapid advances in understanding of cell biology, will almost certainly result in far reaching changes in medical research and practice. In this collection of articles experts in molecular and cell biology provide the background for information to give clinicians an insight into the way in which the medical sciences may be moving over the next few years and into the exciting possibilities opening up for the treatment of genetic disorders, cancer, and the common illnesses of Western society such as degenerative vascular disease and diabetes.

Price: Inland £5.95; Abroad £7.50; USA$12.00
BMA members: Inland £5.45; Abroad £7.00; USA$11.00



One of today's most pressing medical and social problems is comprehensively reviewed in the *ABC of Alcohol.* With an extended introduction by Richard Smith, assistant editor of the *BMJ,* this second, revised and expanded edition brings readers up to date on current approaches to the diagnosis and treatment of alcoholism. Essential reading for all doctors who need to understand the appalling difficulties that this condition creates for patients and their families—and indeed for doctors themselves.

Price: Inland £5.95; Abroad £7.50; USA$13.00
BMA members: Inland £5.45; Abroad £7.00; USA$12.00



Many advances in the treatment of diabetes have been made in the past decade: self measurement of blood glucose, intravenous infusions and intramuscular insulin treatment for diabetic emergencies, continuous subcutaneous insulin infusion techniques, and new tests for autonomic function. The outlook for diabetic pregnancy has been transformed; photocoagulation for retinopathy is reducing blindness; and at last diabetic renal disease is receiving some attention. Dr Peter Watkins's articles set these advances in their clinical context, providing a practical guide to the management of diabetes for non-specialist doctors and nurses. There have recently been several more developments both in understanding the causes of diabetes and improving its management, and this second, revised, edition incorporates the most important of these latest innovations.

Price: Inland £4.95; Abroad £6.50; USA$11.00

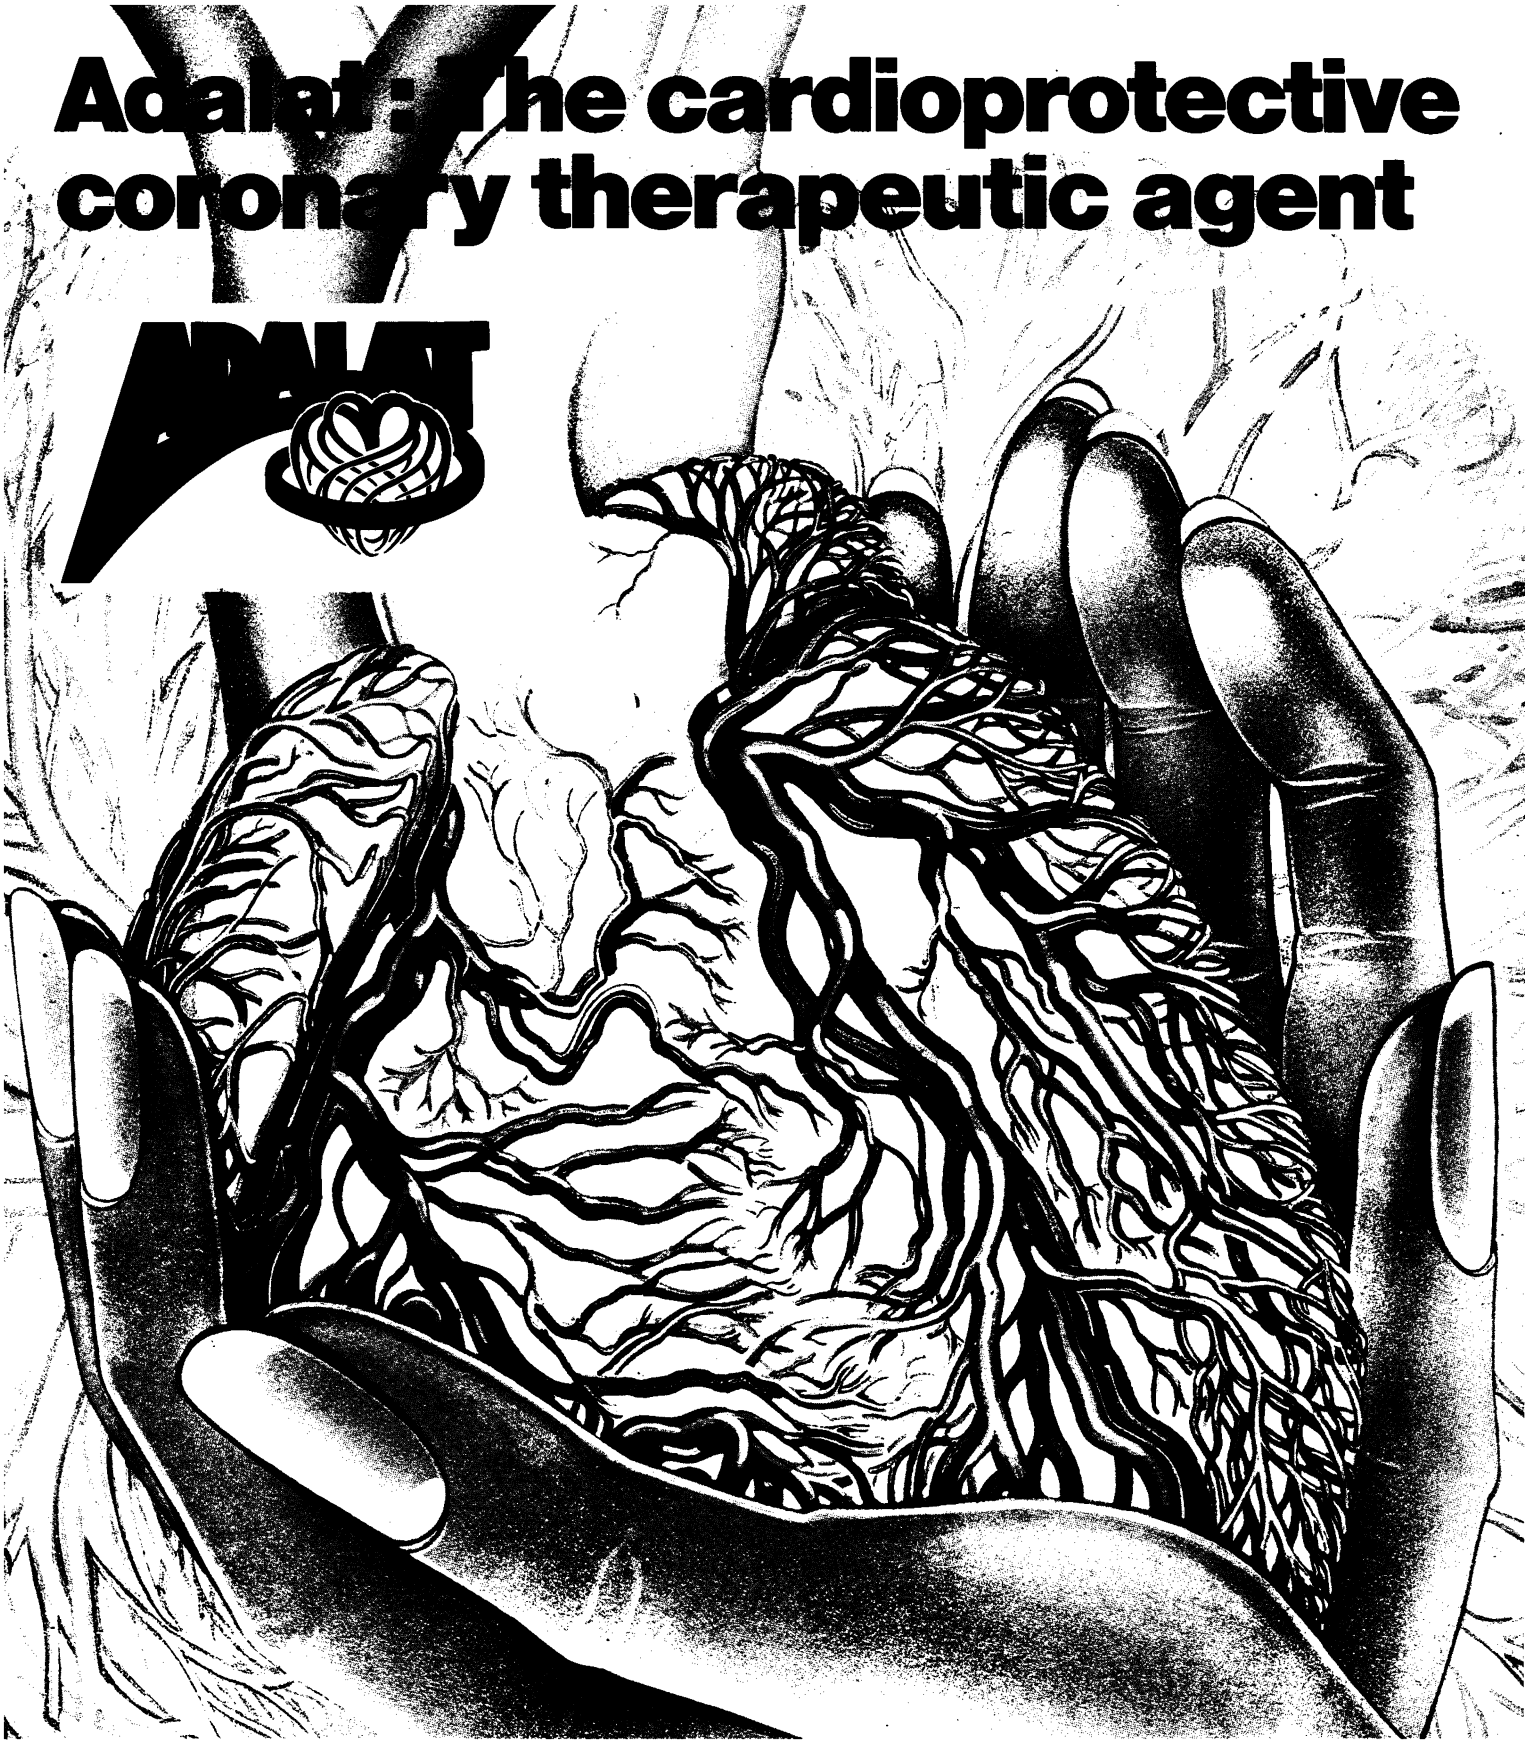
Adalat: The cardioprotective coronary therapeutic agent



Composition: **1 Adalat capsule contains 10 mg nifedipine.** Indications: 1. Coronary heart disease: Chronic stable angina pectoris, angina at rest, including vasospastic angina (Prinzmetal's angina, variant angina) and unstable angina (crescendo preinfarction angina), angina pectoris following myocardial infarction (except in the first 8 days following acute myocardial infarction). 2. Hypertension. Contraindications: Hypersensitivity to Adalat and the whole period of pregnancy. There are no findings on use during lactation. Caution should be exercised in the presence of pronounced low blood pressure (severe hypotension: systolic blood pressure < 90 mmHg). Cardiovascular shock. Side-effects: Side-effects generally occur at the start of therapy and are often of a slight and transient nature: facial flush, heat sensation, headache. In isolated cases, particularly at higher doses: nausea, dizziness, tiredness, skin reactions, paraesthesia, hypotensive reaction, palpitations and increased pulse rate. Occasionally leg oedema due to dilatation of the blood vessels. Extremely rare: during long-term therapy, gingival hyperplasia which regresses completely once therapy is discontinued; chest pain (which may be angina pectoris-like pain) – where this occurs and a causal connection with Adalat is suspected, therapy should be discontinued. Caution should be exercised in dialysis patients with malignant hypertension and irreversible renal failure with hypovolaemia, since vasodilatation can result in a reduction in blood pressure. Treatment of hypertension with this drug requires regular medical supervision. Individuals may react differently to this drug and some patients' ability to drive and to operate machinery may be impaired. This applies particularly at the start of treatment, when changing from one preparation to another and if alcohol is consumed. Mode of action: Adalat is a calcium antagonist and is classified as a coronary therapeutic agent/antihypertensive agent. Dosage: Treatment should be adapted to the individual as much as possible according to the severity of the disease and the patient's response to therapy. Coronary heart disease: Long-term therapy, generally with a daily dose of 3 x 1 capsule Adalat. In some cases the dose can be increased in stages to 60 mg (3 x 2 capsules Adalat). For coronary spasms (Prinzmetal's angina, angina at rest) the daily dose can be temporarily increased to between 80 and a maximum of 120 mg (between 4 x 2 and 6 x 2 capsules Adalat) in individual cases. Hypertension: Daily dose: 3 x 10 to a maximum of 3 x 20 mg (3 x 1 to 3 x 2 capsules) Adalat. If particularly rapid onset of action is required in cases of acute high blood pressure (hypertensive crisis) or impending angina pectoris attack, the individual dose is 1 – 2 capsules Adalat (10 – 20 mg) administered sublingually (the capsule should be bitten). In exceptional cases up to 3 capsules Adalat (30 mg). Dosage interval: Where the individual dose is 20 mg, the capsules should be taken at intervals of not less than 2 hours. Interactions with other drugs: Adalat/antihypertensive agents: concomitant administration may enhance the antihypertensive effect of nifedipine. Adalat/beta receptor blockers: the patient must be monitored carefully during concomitant administration since severe hypotension may occur; development of heart failure has been reported occasionally. Adalat/cimetidine: possible enhancement of antihypertensive effect. Presentations: Adalat: packs with 30, 50 and 100 capsules each containing 10 mg nifedipine.
