

# In vaginal candidosis:

TRADEMARK

ketoconazole

*The elegant way  
to treat an inelegant problem*

2 oral tablets  
**once** daily for **5** days  
is all it takes today  
to cure vaginal candidosis

Ketoconazole is a triazole derivative with antifungal activity. It is effective against a wide range of fungi, including *Candida albicans*. It is indicated for the treatment of vaginal candidosis. Side effects have occurred in patients on ketoconazole, including headache, dizziness, nausea, skin rash, and liver dysfunction. Liver dysfunction has occurred with an incidence of about 1 per 10,000 patients. Some of these patients have been on long-term therapy. This should be borne in mind in patients on long-term therapy. In patients with liver dysfunction suggestive of hepatitis, treatment with ketoconazole should be stopped. Mild liver dysfunction, on the other hand, does not necessitate discontinuation of the treatment. For further information, please contact your local representative on request.

# It always takes to get an early warning.

**T**PA helps in the early detection of recurrent carcinomas. And early treatment can improve the prognosis and quality of life for your patient.

Rises in the post-treatment levels of serum TPA often precede the clinical symptoms of recurrent carcinomas by as much as six months.\*

Serum TPA (Tissue Polypeptide Antigen) can be measured quickly and easily using the Prolifigen® TPA IRMA test.

\*Documented for carcinomas of the bladder, breast, lung and genital tract.

*The illustration depicts the little Dutch boy Hans Brinker saving his home-town of Haarlem from flooding by sticking his finger into a hole in the dyke. The story was written by Mary Mapes Dodge in 1873.*

*This legend about the fair-haired hero of Haarlem is one of the world's best known. As with all good fairy-tales, it has a moral: "Don't wait until too late."*

Serum TPA measurements: For early and efficient detection of recurrent malignant disease.

## One revolution leads to another

The extraordinary technical developments in molecular biology over the past few years, and the equally rapid advances in understanding of cell biology, will almost certainly result in far reaching changes in medical research and practice. In this collection of articles experts in molecular and cell biology provide the background information to give clinicians an insight into the way in which the medical sciences may be moving over the next few years and into the exciting possibilities opening up for the treatment of genetic disorders, cancer, and the common illnesses of Western society such as degenerative vascular disease and diabetes.

Non-specialists overwhelmed by too many systematic descriptions of individual disease will welcome the new approach of *ABC of Dermatology*. Here the history, clinical appearance, and pathology of a few common key conditions are discussed and then used as a basis for comparison with other skin diseases. Also dealing in detail with allergic reactions, autoimmunity, acne, and infections, this handbook is **fully illustrated in colour**, providing a clear guide to assessment and treatment as well as an understanding of the histological changes underlying the clinical presentations.

**Hismanal** TRADEMARK  
astemizole

**The antihistamine of exceptional strength from the first  
to the last day of therapy.**

 **JANSSEN**  
PHARMACEUTICAL  
2340 Beerse, Belgium

**Prescribing information**

**Uses:** Hismanal\* is a potent and non-sedative antihistamine indicated for the treatment of seasonal and perennial allergic rhinitis, allergic conjunctivitis, chronic urticaria and other allergic conditions.  
**Dosage and administration:** adults and children over 12 years: 10 mg daily. Children 6-12 years: 5 mg once daily. Children younger than 6 years: 2 mg per 10 kg daily. Hismanal should be taken on an empty stomach. **Precautions:** Hismanal should be used in pregnant women only when, in the judgement of the physician, the potential benefits outweigh the possible hazards. **Adverse reactions:** weight gain may occur during prolonged treatment. **Overdose:** in case of overdose, gastric lavage should be followed by close observation and ECG monitoring as arrhythmias have occasionally occurred after intake of doses in excess of 200 mg.
