

TRADEMARK

(ketoconazole)

## Did you know

that in seborrhoeic dermatitis a dominant role is played by *Pityrosporum* yeasts?

## And did you know

that *Pityrosporum* is exceptionally sensitive to ketoconazole, alias Nizoral?

If you do, you know why Nizoral cream is the right answer to  
**seborrhoeic dermatitis**

Apply twice daily until a few days after remission of symptoms.

**Indications:** Nizoral cream is indicated for topical application in the treatment of dermatophyte infections of the skin, as well as in the treatment of cutaneous candidosis and tinea (pityriasis) versicolor. Nizoral cream is also indicated for the treatment of seborrhoeic dermatitis, a skin condition related with the presence of *Pityrosporum ovale*. **Precautions:** Irritation may occur when Nizoral cream is used immediately after prolonged treatment with topical corticosteroids. Therefore, it is recommended to continue applying the topical corticosteroid in the mornings and to apply Nizoral cream in the evenings, and to subsequently and gradually withdraw the steroid therapy over a period of 2-3 weeks.

PHARMACEUTICA  
B-2340 Beerse, Belgium

world leader in antimycotic research

Full prescribing information  
available on request.

**•Tilcotil® -  
Relief that's fast  
enough  
even for the  
impatient patient**

As early as 30 minutes after taking 20 mg •Tilcotil®, your rheumatic patient will experience an appreciable relief of pain.

This rapid onset of analgesic action is related to the active ingredient's favourable pharmacological properties. They also ensure that the antirheumatic effect is as long as possible: no less than 24 hours.

**NEW**  
**Tilcotil**  
nonsteroidal antirheumatic
