

TRADEMARK
Nizoral
(ketoconazole)

Did you know

that in seborrhoeic dermatitis
a dominant role is played by
Pityrosporum yeasts?

And did you know

that *Pityrosporum* is exceptional
sensitive to ketoconazole,
alias Nizoral?

If you do, you know why Nizoral *cream* is the right answer to
seborrhoeic dermatitis

Apply twice daily until a few days after remission of symptoms.

Indications: Nizoral *cream* is indicated for topical application in the treatment of dermatophyte infections of the skin, as well as in the treatment of cutaneous candidosis and tinea (pityriasis) versicolor. Nizoral *cream* is also indicated for the treatment of seborrhoeic dermatitis, a skin condition related with the presence of *Pityrosporum ovale*. **Precautions:** Irritation may occur when Nizoral *cream* is used immediately after prolonged treatment with topical corticosteroids. Therefore, it is recommended to continue applying the topical corticosteroid in the mornings and to apply Nizoral *cream* in the evenings, and to subsequently and gradually withdraw the steroid therapy over a period of 2-3 weeks.
