

A new acquaintance a good

 Bencard

can soon become friend.

Amoxil can soon become a good friend because of its reliability in the routine treatment of a wide range of infections.

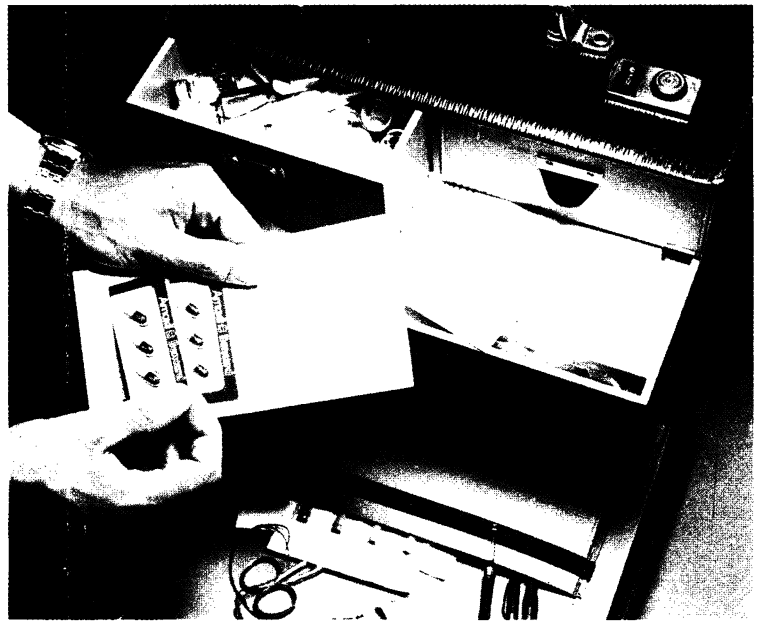

Outstanding oral absorption, not greatly affected by the presence of food, broad spectrum of activity and bactericidal action are among the more notable qualities of Amoxil.

Rapid decisive action coupled with the degree of safety associated with penicillin therapy inspires a high level of confidence in everyday use.

A convenient t.d.s. dosage, independent of meal times, a range of highly acceptable presentations, treatment costing as little as 16p per day – further good reasons why Amoxil represents practical antibiotic therapy at its best.

Extensive clinical trials have demonstrated that in Upper and Lower respiratory infection, Urinary tract and Skin and Soft tissue infections, Amoxil is dependable and trustworthy – as all good friends should be.

Further information on Amoxil (amoxycillin) is available from: Bencard, Freepost, Great West Road, Brentford, Middlesex.

To help you further in your practice, Amoxil starter packs are available from your Bencard representative or from the Company.

Prescribing information

Dosage: Adults 250 mg three times a day. Children – up to 10 years: 125 mg three times a day. In the case of severe infections the dosage should be doubled.

Contra-indication: Amoxil is a penicillin and should not be given to penicillin hypersensitive patients.

Side effects: In clinical trials involving more than 1,500 patients no serious side effects were reported. Those side effects which were encountered were of a mild transitory nature.

AMOXIL

an excellent antibiotic for routine treatment

In the Nobrium general practice survey 228 British GPs studied 691 patients with anxiety, most of whom kept a subjective record of their progress. Both the GPs and the patients recorded a substantial remission of symptoms with Nobrium (a total pretherapy symptom score of 9167 was reduced to 3888). A detailed analysis of these results is now being circulated to all general practitioners under the title of the Nobrium general practice survey: Results in 691 patients

B.M.J. Publications

Problems of the Newborn

Many doctors outside the neonatal and paediatric field may be unaware of the rapid advances made in the care of the newborn in the last decade. Last year the *B.M.J.* published a series of articles discussing the diagnosis and management of common conditions affecting newborn babies. The articles have been revised by their authors and collected together as a booklet, forming a useful guide to both serious problems and more everyday topics which confront doctors in their practice.

PRICE £1.00 (U.S.A. \$3.00), *including postage*

Gynaecology in General Practice

As in other branches of medicine, the pattern of gynaecological problems likely to be encountered by the general practitioner will probably change in the future. Moreover, many doctors, now in practice were taught little about some of the topics which are important today and are likely to become even more so. In 1971 the *B.M.J.* published a series of articles in the "Medical Practice" section discussing the management of various gynaecological disorders in a domiciliary setting. These have now been collected together as a booklet entitled *Gynaecology in General Practice* and provides a useful and up-to-date account of gynaecology in general practice.

Ceporex 250mg q.d.s. means success in bronchitis

In a recent clinical trial* conducted among General Practitioners, 156 bronchitic patients were treated with Ceporex 250mg q.d.s. Both chronic and acute conditions were treated, mainly of mild to moderate severity. Success rate with this economical dosage regimen was high – 80% in acute bronchitis and 81% in chronic bronchitis.

In bronchitis, Ceporex 250mg q.d.s. can reduce the risks and improve the results.

Dosage recommendations for Ceporex

As indicated in the table below, the dosage requirements in some infections can vary considerably from patient to patient. However, most cases of urinary tract and skin infections, sinusitis, otitis media and bronchitis treated in General Practice respond well to a dosage of 1 gram a day.

Guide to adult dosage (oral)

	15–30mg/kg/day or 250mg q.d.s.	30–60mg/kg/day or 500mg q.d.s.	60–100mg/kg/day 1G t.d.s. to 1.5G q.d.s. or 2G t.d.s.
Urinary tract infections	Acute simple cystitis	Chronic, recurrent or complicated cystitis and pyelonephritis	Prostatitis (3G daily)
	Acute simple pyelonephritis 250–500mg q.d.s. Asymptomatic bacteriuria 250–500mg q.d.s.		
Ear, nose and throat infections	Acute tonsillitis Acute pharyngitis	Chronic sinusitis Chronic otitis media Peritonsillar abscess Mastoiditis	
	Acute sinusitis 250–500mg q.d.s. Acute otitis media 250–500mg q.d.s.		
Respiratory tract infections	Bronchitis 250–500mg q.d.s.		Pneumonia† Lung abscess†
Skin and soft-tissue infections	Furunculosis Lymphadenitis Lymphangitis Superficial wound infections	Cholecystitis Cholangitis	Infections with less sensitive gram-negative organisms, and deep or serious infections†
Gynaecological and obstetrical infections	Uterine and adnexal infections and acute mastitis		More severe infections or those with less sensitive organisms
Osteo-articular infections			Acute or chronic osteomyelitis and acute septic arthritis (4 grams daily)†
Severe systemic infections			Septicaemia† Bacterial endocarditis†
Dental treatment in heart disease	Temporary replacement of penicillin		
Venereal diseases (If penicillin is unsuitable)	<i>Gonorrhoea</i> : a single dose of 3 grams cephalaxin with 1 gram probenecid is usually effective in males, and 2 grams cephalaxin with 0.5 gram probenecid in females <i>Syphilis</i> : 500mg q.d.s. for two weeks		

†Dosage may be reduced later depending upon the response, and the sensitivity of the organism.

Ceporex is cephalaxin, a semi-synthetic antibiotic derived from cephalosporin C. It is acid-stable, and well absorbed after oral administration. Ceporex has a broad range of bactericidal activity, has little toxicity, and is apparently not nephrotoxic even in high dosage.

Antibacterial activity

Ceporex is bactericidal to many gram-positive and gram-negative micro-organisms. It acts more rapidly against the latter than against gram-positive organisms and appears to be completely stable to staphylococcal penicillinase. Most strains of *Staphylococcus aureus* (including penicillin-resistant types) are susceptible, but the rare methicillin-resistant strains are usually resistant to Ceporex. Other sensitive organisms include *Streptococcus pyogenes*, *Diplococcus pneumoniae*, *Corynebacterium diphtheriae* and most strains of *Streptococcus viridans*. *Str. faecalis* varies in its sensitivity. Sensitive gram-negative organisms include most strains of *Escherichia coli*, *Klebsiella pneumoniae*, *Proteus mirabilis* and many strains of *Haemophilus influenzae*. *Neisseria gonorrhoeae* and *N. meningitidis* are highly sensitive. *Salmonella* and *Shigella* spp. are also sensitive.

Ceporex is rarely active against *Proteus morgani* or *Pr. vulgaris* and is inactive against *Aerobacter aerogenes*, *Mycobacterium tuberculosis* and *Pseudomonas aeruginosa* (*pyocyanea*). Bacterial resistance develops slowly in a step-wise manner on repeated subculture.

Pharmacology

Absorption of Ceporex is probably from the duodenum after oral dosage and is rapid and nearly complete. If the antibiotic is given immediately after a large meal, absorption is slower and the peak serum levels are slightly reduced, but the total amount absorbed is unchanged. The peak serum level usually occurs between one and two hours after administration. The serum half-life of Ceporex is normally about one hour. In the new-born, serum levels are likely to be higher and more prolonged. Binding to serum protein is low, and reversible. The extent varies from zero to 30% depending upon the method of estimation.

Concurrent administration of probenecid usually raises peak serum Ceporex levels by 50 to 100%.

Ceporex is excreted in unchanged active form in the urine by glomerular filtration and by tubular secretion. Between 80 and 100% of a dose can be recovered from the urine within 24 hours (mostly within the first six hours).

The mean urinary concentration of Ceporex after one oral dose of 250mg falls from a peak of about 1,000 micrograms/ml to about 40 micrograms/ml over twelve hours.

About 3 to 5% of Ceporex is excreted in the bile, where concentrations are one to four times the concurrent concentration in the serum. The peak concentration in the milk after a dose of 500mg is about 5 micrograms/ml.

Precautions

In patients treated with Ceporex, a false-positive reaction for glucose in the urine may occur with Benedict's or Fehling's solutions, or with 'Clinitest' tablets, but not with 'Clinistix'.

Ceporex is usually tolerated well by patients allergic to penicillin, but cross-reaction can occur occasionally.

As with other antibiotics, Ceporex should be administered with caution in patients with a history of allergy, especially to drugs. When renal function is markedly reduced, Ceporex will accumulate in the serum and tissues unless dosage is suitably reduced.

Laboratory experiments with animals and clinical experience show no evidence of teratogenicity, but as with all drugs, caution is needed during pregnancy.

Contra-indication

Hypersensitivity to cephalosporins.

Adverse reactions

A small proportion of patients receiving Ceporex may experience gastrointestinal disturbances such as nausea, vomiting, diarrhoea, anorexia and general abdominal discomfort. As with all broad-spectrum antibiotics, superinfection (sometimes monilial) can occur, and may present as vulvo-vaginitis. Reversible neutropenia has occurred in a few patients, but is very rare.

Generalised drug rashes – urticarial or maculopapular – are uncommon.

Administration and dosage

Ceporex is administered orally. Treatment should continue for at least two days after the temperature has returned to normal and symptoms have subsided. However, in chronic, recurrent or complicated upper urinary tract infections a course of at least two weeks' duration may be necessary.

When renal function is considerably impaired, the dosage should be reduced. If the creatinine clearance is 20 to 50ml/minute, the adult dosage of Ceporex should not exceed 3 grams/day; if between 5 and 20ml/minute, not more than 1.5 grams daily; if the clearance is below 5ml/minute, dosage should not exceed 500mg/day.

Patients receiving intermittent dialysis should be given an additional 500mg of Ceporex after each dialysis, i.e., a total dosage of up to 1 gram on that day.

What some doctors may forget

Bread is a major source of protein, B vitamins, iron and calcium, as well as providing energy. As such, it plays a key role in the national diet, and few can afford to do without it. For instance, almost *one-fifth* of the protein in an average diet comes from bread alone. It is one of the best food bargains in the world, when you consider that penny for penny bread contains nearly twice as much protein as cheese, and three times the protein of white fish or beef.

Yet bread is often underestimated as the

source of such a wide range of essential nutrients. In the right amount, it plays a vital part in helping to keep any diet in healthy balance. To deprive anyone, including the slimmer, of all the goodness of bread, can throw a diet drastically—and even imprudently—out of balance.

The 1970 National Food Survey confirms the vital importance of bread in the national diet. According to this survey the percentages of essential nutrients in the average daily diet deriving from bread alone are shown below.

A doctor without insurance must have nerves of steel.

Just think about the number of times
you've seen patients struck down by a serious illness.

Just think about the tragic
consequences when they haven't got adequate
insurance cover. It's a rather unhappy story.

And as a doctor you're in a better
position than most to realise that the chances of this
happening are greater than the majority of people think.

So if you haven't adequate insurance
yourself, that's something you should be feeling rather
nervous about.

Luckily there's a simple answer. A

INITIAL PRACTICE ALLOWANCE

A vacancy exists for a suitably qualified general medical practitioner to start a new group of doctors to provide general medical services in the first phase of the Mosborough Development.

The Mosborough Development is planned to take place in the south east part of the City on land which was transferred from Derbyshire County Council in April 1967. The Development will provide housing for about an additional 50,000 people within a number of independent townships. Each township will have dwellings for about 5,000 people grouped around a primary school and a local centre containing shops, public houses and other facilities. The first phase of the Development, comprising the townships of Halfway, Westfield and Waterthorpe is expected to be completed in 1978.

It is planned to provide the Health Services for the first phase of the Development from a Health Centre to be sited at Westfield. Until the Health Centre is ready, (probably late 1973), Sheffield Corporation will make available a house in Westfield for use as temporary practice accommodation. It is intended there will be full attachment of health visitors and nursing staff and close co-operation with Social Services Department of the Local Authority. There is open access to laboratory and X-ray facilities in the Sheffield Hospitals.

The vacancy attracts a special Type D initial practice allowance, which guarantees that the doctor's net annual professional income for the first three years, or earlier if a partnership develops, will not be less than his previous net professional income up to a maximum of £5,820. The experience expected will normally be about ten years as a qualified doctor, of which two have been in hospital appointments and five in a busy general practice in this country. In due course the appointed doctor will be expected to take partners and to become the leader of the medical team in the Development area. He should have enthusiasm for administering a new project and the ability to attract and work with other practitioners. He should be used to maternity work and acceptable for the obstetric list. The successful applicant will be expected to commence practising on 1st April, 1973.

There is a possibility that at a future date this practice could be associated with the new Department of Community Care and General Practice in the University of Sheffield.

There will be two interviews for this vacancy, one in Sheffield and the other in London. The final selection will be made by the Medical Practice Committee, London.

Application forms and further information may be obtained from the Clerk of the Council, Executive Council for the City of Sheffield, Brincliffe House, Osborne Road, Sheffield S11 9BD. Closing date for receipt of completed application forms is 23rd October, 1972. (H8256) 5

CLINICAL PHARMACOLOGIST

For Research

We are seeking a physician with experience in investigative medicine or scientific research who is interested in joining a team working in the field of human pharmacology. The post will be located within our Clinical Pharmacology Department at Brockham Park Research Centre near Dorking, where facilities exist for both laboratory and clinical investigation. It will also involve collaborative work at a new purpose built clinical pharmacology unit located at a London hospital.

The work involves practical, clinical investigation into the problems of absorption, distribution, metabolism, excretion and mode of action of new and existing drugs. These investigations are made on volunteer subjects at the early stages of Human Pharmacology prior to clinical trials which are the responsibility of a separate department. There are well defined areas of responsibility with ample scope for initiative and original thought.

The successful applicant will be an experienced physician who has experience equivalent to that of Registrar level in clinical medicine and is capable of liaising with senior scientists in other disciplines. Knowledge and experience of an appropriate speciality, a higher medical qualification, or previous experience in clinical pharmacology would be considered advantageous, but not essential.

Beecham Research Laboratories are part of the Beecham Group and situated in a pleasant area of Surrey within easy reach of London. The successful applicant will qualify for the Group's bonus, non-contributory pension and life assurance schemes. Please apply briefly, stating age, qualifications and experience to:

Head of Personnel Department,
Beecham Research Laboratories,
Brockham Park,
Betchworth,
Surrey.

with the potential to play an important role in the clinical development and evaluation of new drugs. This will involve working as a part of the well integrated team that already exists within our Medical Department in Basle, Switzerland.

The selected candidates will probably be under 40 years of age, with a sound knowledge of clinical medicine and therapeutics. One will have particular experience of cardiovascular diseases.

A genuine interest in clinical trials is essential and some knowledge of German or French an advantage. Opportunities exist for postgraduate education which includes language courses.

Attractive conditions of employment, including a first-class pension scheme and generous assistance with re-location expenses to Switzerland, will be offered.

Further details of the type of work involved will be discussed at interview in the U.K. with one of our senior clinical research physicians. Applications, which will be treated in strict confidence, should give age and full particulars of qualifications and experience and should be addressed in the first instance, quoting Ref. Medical Officer

**The National Diamond Mining Company
(Sierra Leone) Limited**

The Company has two well-equipped hospitals serving a population of over 4,000 employees and their families. The Medical Officer will be required to work in all of the hospital departments. The ability to do emergency surgery is essential. An interest in midwifery and anaesthetics is a decided advantage.

The conditions of work are excellent; rent free fully furnished accommodation, (including cutlery, crockery, bedding, etc.), free medical attention (dependants are also covered under the B.U.P.A. scheme), and generous children's education allowance. Sporting amenities include tennis, squash, swimming, cricket, golf and rugby football.

The basic starting salary is negotiable but an inclusive commencing emolument within the range £4,800 — £5,900 p.a. is envisaged. Salaries are reviewed annually.

Tours of duty consist of 12 months followed by 12 weeks' leave on full salary. Passages are paid for the doctor, his wife and children up to eighteen years of age.

Mr. D. J. Beake, of Sierra Leone Selection Trust Limited (the Company's Managers), Mason's Avenue, London EC2V 5BU, would be pleased to receive applications from interested doctors who are asked to give, in confidence, brief particulars of age, qualifications, experience and availability. Please quote Ref. 210 BMJ.

Consultant Pathologist Zambia

Applications are invited for the position of Consultant Pathologist with the Rokana Division of Nchanga Consolidated Copper Mines Limited at Kitwe, Zambia.

The successful candidate will have a higher degree in pathology and will be primarily a morbid anatomist, preferably with experience in cytology. In addition to providing a histopathology and cytology service he will supervise the sections of bacteriology, parasitology, haematology, blood transfusion and biochemistry.

The central pathological laboratory of Rokana Division has a staff of five qualified laboratory technologists in addition to a number of local laboratory assistants. This laboratory also performs histopathology and cytology for the medical departments of the other three mines in the N.C.C.M. group. At present the qualified technical staff is entirely expatriate. However, in co-operation with the group training department and the Evelyn Hone College of Further Education in Lusaka, the Rokana pathological laboratory takes part in a scheme of technician training for Zambians. A training officer/laboratory supervisor has been appointed to supervise the student technicians in the practical part of the

course. The Pathologist will be required to take particular interest in this training.

The appointment is on a one to three year contract, renewable. The basic starting salary will be dependant upon experience and qualifications, but will not be less than K9,200 (£5,152). In addition to the basic salary a company house is provided free of charge and a furniture allowance is payable. Leave is at the rate of 66 days per annum. Children receiving education overseas are granted up to £500 per child towards school fees and are given two return passages per year to visit their parents during holidays. *Income tax is lower than in the U.K. and Exchange Control Regulations allow for up to 33½% gross income to be remitted home.*

Applications giving full details will be treated in the strictest confidence and should be submitted to:

Anglo Charter International
Services Limited,
(Appointments Division),
Department No. A749/FF,
7 Rolls Buildings,
London EC4A 1HX.

Intal doesn't relieve asthmatic attacks

It prevents them

Steroids, bronchodilators and antihistamines, whether in aerosol or tablet form, are only symptomatic treatments. Whereas INTAL actually *protects* the patient from asthmatic attacks—day in, day out.

By preventing the release of spasmogens INTAL affords daily prophylaxis for as long as any challenge exists. More than 150 clinical trials have proved its effectiveness, safety and ease of administration.

But only an asthmatic can really appreciate the difference it makes.

In infected eczema,
it's the eczema you worry about.

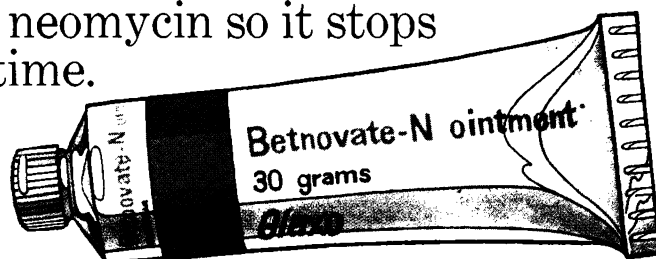

Betnovate-N

stops the scratching that starts the
infection that results in infected eczema.

And does it quicker than other preparations designed
to combat infected eczema, because it contains
betamethasone as 17-valerate, a more effective steroid.

Betnovate-N also contains neomycin so it stops
most infections at the same time.

And at a price others
can't match.
