## Cardiovascular Research

**For angina. For hypertension.**

Merck Sharp & Dohme is pleased to announce the introduction of Blocadren, a significant product of original research which provides practitioners with an effective pharmacological method of managing the long-term clinical effects of angina and hypertension, while permitting most patients to live a more normal life-style.

Introducing a new beta-adrenergic blocking agent indicated

- for the long-term management of angina pectoris due to ischaemic heart disease
- for the treatment of essential hypertension

## For the patient with angina—restricted by pain

A world-wide double-blind co-operative study\* was conducted by 29 investigators. Three hundred and seven patients completed the study.

### Fewer anginal attacks

Patients receiving 'Blocadren' showed a drop from an average of 12 anginal attacks per week to under 4 attacks per week. Compared to placebo, twice as many patients on 'Blocadren' were free of anginal attacks (30% vs 13%).

### Less severe anginal attacks

Investigators reported either no anginal episodes or only mild episodes in 67% of patients treated with 'Blocadren'.

### Reduced intake of glyceryl trinitrate

Patients receiving 'Blocadren' showed a reduction from a pretreatment average weekly intake of glyceryl trinitrate from 10.6 tablets to 3.2 tablets at the completion of the study. Compared to placebo, twice as many patients on 'Blocadren' had no need for glyceryl trinitrate (39% 'Blocadren' vs 19% placebo).

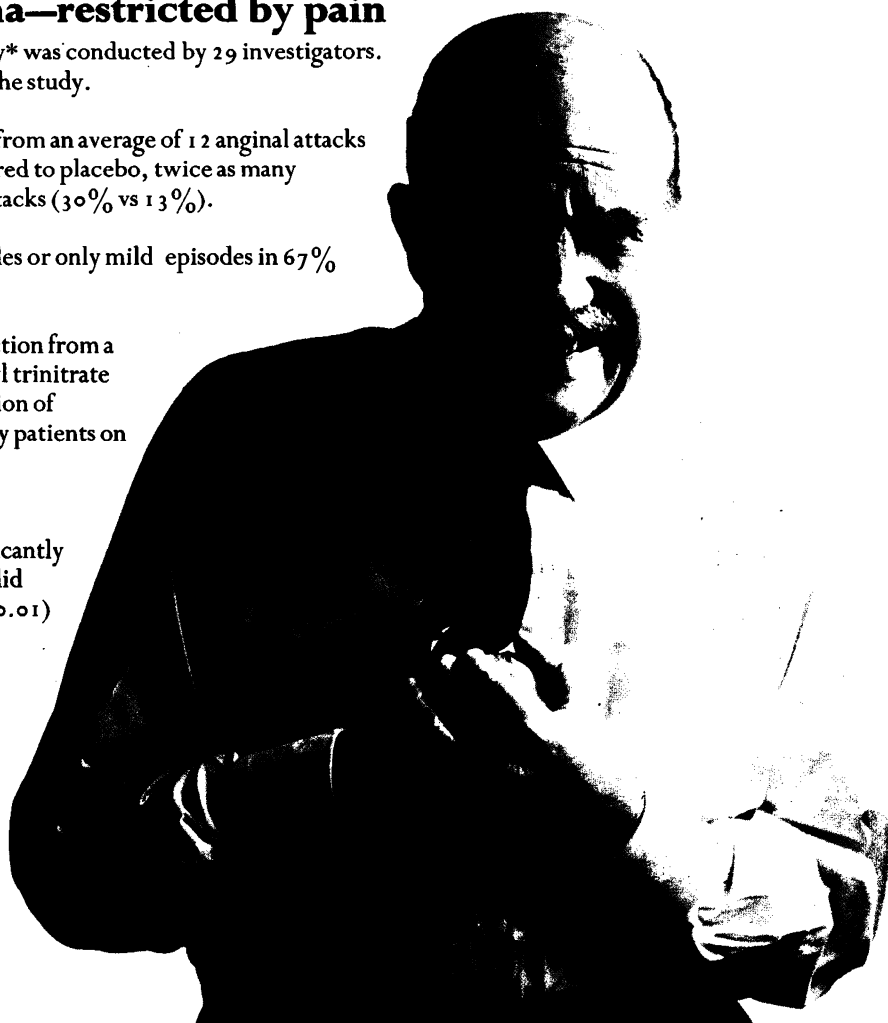

### Stress tolerance improved

Patients receiving 'Blocadren' required significantly more stress to produce an anginal attack than did the patients receiving placebo (Week 28;  $p < 0.01$ )

### Remarkable overall response

Good to excellent response was reported in 71% of patients treated with 'Blocadren' compared to only 26% of patients on placebo.

# two major problems.

## For the patient with hypertension—an asymptomatic risk

The asymptomatic hypertensive patient is 'at risk' for two reasons—side effects of medication may cause him to discontinue therapy, and inadequate control may result in progressive organ damage. 'Blocadren' can help remedy both problems.

### Effective in 4 out of 5 patients

Clinical effectiveness was confirmed in 80% of patients treated with 'Blocadren' in a world-wide double-blind co-operative hypertension study.\*

### Significant reduction in diastolic pressure

The average of the co-operative study and five other studies\* showed that 4 out of 5 patients responded with a significant reduction in pressure (defined as a reduction of 10 mm Hg or more, or a drop to 90 mm Hg, in supine diastolic pressure).

Percentage of patients responding in individual studies ranged from 64 to 94%.

### Used safely with thiazide

In another study\*, 'Blocadren' was safely administered to 24 patients concurrently with hydrochlorothiazide.

## Heartburn

**If antacids were the complete answer, would she return to your surgery so often?**

Antacids deal with excess acid. But, in many cases, dyspepsia involves more than this.

Unpleasant symptoms such as dyspepsia, heartburn and gastritis can frequently be traced back to disturbed gastric motility. Recent research has shown that in many patients food is retained for too long in the stomach, gastric contents enter the oesophagus, and bile refluxes from the duodenum.<sup>1</sup>

With Maxolon, you can resolve this underlying problem. Maxolon restores gastric motility to normal, so that symptoms of dyspepsia are prevented.

Prescribe Maxolon (tablets or syrup) for your dyspepsia patients. They—and you—will appreciate the difference.

Full information on Maxolon in gastroduodenal conditions is available on request.

**Fallacy: "Bread is a highly fattening food, providing practically nothing of value in the diet - just carbohydrate."**

**Reality: "Bread is moderate in calories, and therefore no more fattening than the majority of foods in our diets. As well as calories, it provides a wide range of nutrients!"**

Derek Miller, Lecturer in Nutrition at London University

Bread's contribution to the average daily diet.

<b>Protein</b>	<b>17.0%</b>
<b>Calcium</b>	<b>13.4%</b>
<b>Iron</b>	<b>17.7%</b>
<b>Niacin</b>	<b>13.7%</b>
<b>Thiamine</b> (Vitamin B1)	<b>22.1%</b>
<b>Energy value</b>	<b>14.4%</b>

Source: National Food Survey 1972

Many dietitians recommend that a reasonable amount of bread should be included in a calorie-controlled, weight-reducing diet because it provides such important quantities of essential nutrients—and does

so at such low cost. So, if you're cutting down all round, it's particularly important to maintain an adequate intake of protein, energy, the B vitamins, calcium and iron, all of which are provided by bread. A sandwich can provide the equivalent nutrition and calorie-value to a cooked meal—as Dr. Sally Parsonage, nutrition expert writing in the journal *Slimming and Nutrition* (May/June 1974), points out:

*A bowl of tomato soup, 3 oz boiled gammon, gravy, peas and a boiled potato: approximately half a day's requirement of protein, iron, vitamins B1 and C, and a useful contribution of calcium and other B vitamins as well.*

*A sandwich of two slices of buttered bread, 3 oz cheese and a sliced tomato: an equal quantity of protein and all the vitamins in the cooked meal — PLUS half a day's requirement of two more important vitamins, A and D, a little less iron but more calcium.*

## How do you see your slice of bread?

*asks Derek Miller*

In a recent article\* Derek Miller puts bread into perspective. Even—yes—in slimming. "In fact," he writes, "bread provides 70 calories an ounce. It isn't a very high-calorie food, like fats which provide as many as 260 calories an ounce—nor a very low-calorie food. Bread comes some where in between, in company with foods like *meat*—which are usually thought of as slimming."

### One slice of bread lightly buttered: 150 calories

6 oz white fish	150 calories
6 cubes chocolate	150 calories
6 teaspoonfuls sugar	150 calories
1½ oz cheddar cheese	150 calories
6 oz baked beans	150 calories
¾ pint pale ale	150 calories

Derek Miller sums up: "On the basis of calories (and a calorie obtained from bread, or any other food, is no more fattening than a calorie obtained from meat, or fish, or anything else), bread certainly couldn't be considered highly fattening.

"If you're counting calories to lose weight, devising your own diet, or just trying to keep your weight steady, there is no reason why bread should not form an inexpensive and useful ingredient in any varied and healthy diet."

## Are asthmatic attacks ruining her lungs?

Asthmatic attacks can damage lungs.

Sometimes the bronchioles lose their elasticity, the ability to expel phlegm is impaired and there is increased risk of infection.

Sometimes the alveoli themselves may suffer damage.

Aerosol bronchodilators can help, but only when the attack is under way, and there may already be damage.

Only Intal prevents the attack and eliminates these problems.

With Intal, there is no danger of side effects, no risk of misuse and no diminution of therapeutic effect.

Put them on Intal.  
Give them a fighting chance.

# Some people take barbiturates because they can't face another day

Every year many thousands of people attempt to kill themselves with barbiturates. Some die. Most survive. But usually only after intensive treatment, in hospital.

Virtually all of these patients could be transferred to Mogadon, which is much safer,<sup>1</sup> but just as effective in inducing sleep.<sup>2</sup> Moreover, it causes few of the barbiturates' many other problems.<sup>3-5</sup>

Patients may still try to kill themselves. But with Mogadon few, if any, would succeed and most would recover in less than 12 hours without treatment.<sup>1</sup>

# PAROVEN<sup>®</sup>

improves capillary flow

## Relief of symptoms in varicose disorders

*Varicose veins, post-phlebotic syndrome, superficial thrombophlebitis, varicose ulcers, varicose eczema, ankle oedema, restless legs, paraesthesia, haemorrhoids.*

**Dosage** Initial treatment: 4 capsules a day, preferably with meals. In most cases, at least four weeks treatment with PAROVEN is required before significant benefit is felt. At the point where the patient experiences benefit, the dosage may be adjusted to a maintenance level. Maintenance treatment: 1-2 capsules a day.

**Side effects and Precautions** In a few patients, slight gastro-intestinal disorders, flushes and headaches have been reported. These are usually overcome by taking the capsules with

meals or by slight adjustment of dosage. There are no known contra-indications to PAROVEN; it is virtually non-toxic and has no teratogenic effects. In keeping with current teaching and practice its use during the first trimester should, however, be avoided.

**Availability** Capsules, each containing 250 mg of O—(  $\beta$ -hydroxyethyl)—rutosides (not less than 45% troxerutin) in bottles of 20 and 100 capsules.

Paroven is known as Venoruton in certain overseas markets

Surgical hosiery provides venous support, but PAROVEN is a kind of 'physiological elastic stocking' for the capillaries.

"The most obvious effect of treatment with HR (Paroven) is the very constant relief of night cramps, with an improvement exceeding 90 per cent."

*Brit J Clin Pract* (1970) 23, 161

"The degree of relief in chronic aching pain in the legs was not so marked (compared with 90% improvement in night cramps and 70% improvement in heaviness of the legs), but still amounted to 54 per cent."

*Brit J Clin Pract* (1970) 23, 161

"Symptoms of heavy legs are improved in 70 per cent, and it was generally agreed that not only did legs feel lighter but the patients were more agile."

*Brit J Clin Pract* (1970) 23, 161

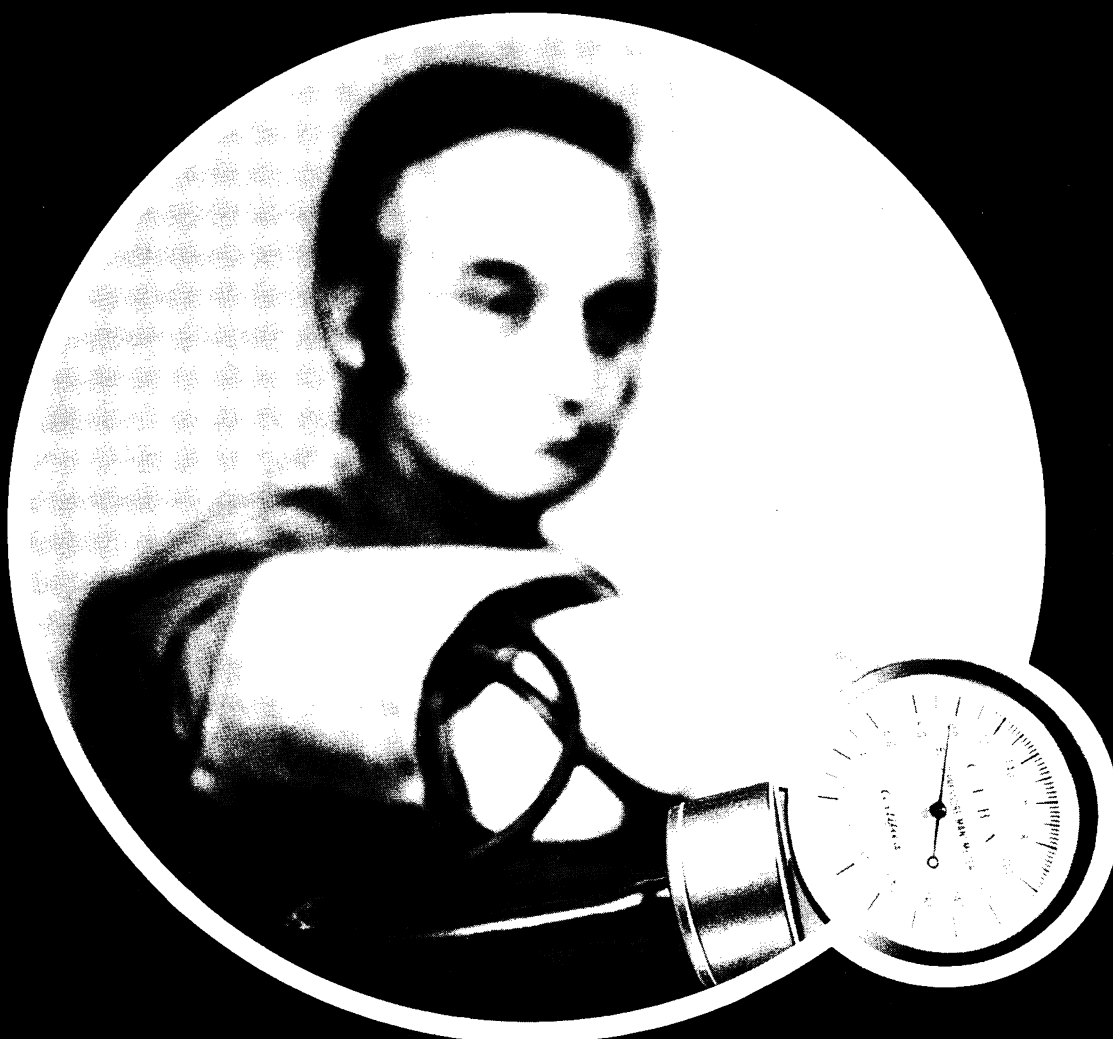

*"The improved venous blood oxygenation and the reduced tissue oxygen extraction indicated better tissue perfusion with less blood oxygen having been taken from the increased capillary blood flow."*

# NAPROSYN

naproxen 250 mg.

**Powerful  
in arthritis**

**Kind  
to patients**

Naprosyn is a powerful non-steroidal anti-inflammatory agent with analgesic properties, for the treatment of rheumatoid arthritis, osteo-arthritis and ankylosing spondylitis. Naprosyn significantly reduces morning stiffness, relieves painful joints, increases mobility and improves grip strength. Naprosyn is well tolerated.

**NAPROSYN** round-the-clock action in  
rheumatoid and osteo-arthritis

#### Prescribing Information

Presentation: NAPROSYN (naproxen) is a new and unique non-steroidal anti-inflammatory agent, developed by Syntex Research. It is unrelated to salicylates, the corticosteroid hormones, or to other anti-inflammatory compounds now in use. It is presented as a yellow half-scored tablet containing 250mg of naproxen, inscribed NAPROSYN on one side, and SYNTEX on the other.

Indications: NAPROSYN is indicated for the treatment of rheumatoid arthritis, osteo-arthritis (degenerative arthritis) and ankylosing spondylitis.

NAPROSYN has been shown to have striking anti-inflammatory properties when tested in classical animal test systems. In addition, it has marked analgesic and antipyretic actions. It exhibits its anti-inflammatory effect even in adrenalectomised animals, indicating that its action is not mediated through the pituitary-adrenal axis. It inhibits prostaglandin synthetase, as do other non-steroidal anti-inflammatory agents. As with other agents, however, the exact mechanism of its anti-inflammatory action is not known.

Dosage and Administration: The recommended starting dose (and usual maintenance dose) of NAPROSYN is 250mg twice daily, usually given with the morning meal and about 12 hours later. Dosage adjustment within the range of 375mg to 750mg daily, maintaining twice-daily administration, may be required for long-term maintenance.

As safety and efficacy studies in children are not yet complete, the product is currently not recommended for use in children under 16 years of age.

Contra-indications: There are no known absolute contra-indications.

Special Precautions and Warnings: NAPROSYN has been found to be well tolerated by patients exhibiting dyspepsia with other similar agents. Nonetheless episodes of gastro-intestinal bleeding have been reported in patients with NAPROSYN therapy. NAPROSYN should be given under close supervision to patients with a history of gastro-intestinal disease.

Due to the high plasma protein binding of NAPROSYN patients simultaneously receiving hydantoins, anti-coagulants or a highly protein-bound sulphonamide should be observed for signs of overdosage.

Occasional skin rashes and angio-oedema have been reported. Patients who have exhibited aspirin hypersensitivity in the past (usually as the angio-oedema/asthma

syndrome) may exhibit the same phenomenon on NAPROSYN. The following additional occurrences have been reported with NAPROSYN but a causal relationship to NAPROSYN has not been established: abdominal discomfort, epigastric distress, headache, inability to concentrate, insomnia, thrombocytopenia, tinnitus, vertigo.

Sporadic abnormalities in laboratory tests (e.g. liver function tests) have occurred in patients on NAPROSYN therapy but no definite trend was seen in any test indicating toxicity.

Teratology studies in rats and rabbits, at dose levels equivalent on a human multiple basis to those which have produced foetal abnormality with certain other non-steroidal anti-inflammatory agents, e.g. aspirin, have not produced evidence of foetal damage with NAPROSYN. As with other drugs of this type NAPROSYN produces delay in parturition in animals. The relevance of this finding to human patients is unknown. However, good medical practice indicates minimal drug usage in pregnancy, and use of this class of therapeutic agents requires cautious balancing of possible benefits against potential risks to the mother and foetus.

Overdosage: Should a patient ingest a large number of NAPROSYN tablets accidentally or purposefully, the stomach may be emptied and usual supportive measures employed. Animal studies indicate that the prompt administration of activated charcoal in adequate amounts would tend to reduce markedly the absorption of the drug.

Pharmaceutical Precautions: Protect from light.

Legal Category: To be supplied on prescription only.

Package Quantities: NAPROSYN is supplied in canisters of 250 tablets. (N.H.S. Price £17.50).

Further information. In addition to the excellent therapeutic efficacy demonstrated by NAPROSYN in comparative clinical trials, good tolerance has been demonstrated, even in patients exhibiting multiple intolerance to other commonly used non-steroidal anti-inflammatory agents.

Product Licence Number PL/0286/0031B (NAPROSYN is a registered trade mark).

Product Licence Holder: Syntex Pharmaceuticals Limited, St. Ives House, Maidenhead, Berkshire. Technical literature, symposia proceedings and full bibliography are available on request.

# 'Orudis' in arthritis

## Optimal efficacy and tolerance now further confirmed by two new studies

### Activity equal to that of phenylbutazone

"... in 47 patients with osteoarthritis of the hip, it has been shown that there is little to choose in efficacy between ketoprofen ['Orudis'] 200mg daily and phenylbutazone 300mg daily... Side-effects were mild..."<sup>1</sup>

Comparative clinical studies with indomethacin<sup>3</sup> and ibuprofen<sup>4</sup> have already shown that 'Orudis' affords both significant therapeutic effect and low toxicity in the treatment of arthritis.

1 *Rheumatol. and Rehabil.*, (in press), 1974  
2 *Scand. J. Rheumatol.*, (in press), 1974

### Tolerance markedly superior to that of aspirin

"... a trial with gastroscopic examinations has allowed the adoption of the hypothesis that the new anti-inflammatory product ketoprofen ['Orudis'] is better tolerated by the gastric mucosa than acetylsalicylic acid..."<sup>2</sup>

The latest comparisons with two further widely prescribed agents provide additional cogent evidence of its ability to meet the criteria for optimal drug management.

UNIVERSITY OF NOTTINGHAM  
Medical SchoolTWO SENIOR LECTURESHIPS  
OR LECTURESHIPS

will be vacant in the Department of Human Morphology as from 1st October, 1974. One of these posts arises as the result of the promotion of the present incumbent to a Chair in another centre; the other as a result of the planned expansion of the Medical School which will increase its student intake from October, 1975.

The Department moves into the new Medical School/University Hospital complex during the academic year 1974/75. New accommodation has been designed to take account of and facilitate teaching and research in modern functional and applied, including living, anatomy. The Department is primarily concerned with the training of medical undergraduates and postgraduates. In addition, courses are provided for various groups of medical ancillary workers.

Research is currently proceeding in fields of neurology, endocrinology, skeletal growth and developmental disorders, histochemistry, tissue culture, haemolymphoid system and cell kinetics with special reference to the alimentary tract. All aspects of anatomy, ranging from cell structure to topographical, including neuro-anatomy and embryology are regarded as components of integrated-system courses or as basis for physical examination and disorders of man. Successful applicants would be expected to contribute in the fields of teaching and research.

Applicants should either be medical graduates or graduates in veterinary medicine or biological sciences, with experience in medical or veterinary anatomy or related fields, such as cytochemistry. The Department has close links with a number of clinical units and disciplines and chances for collaborative work are very good. A number of posts in the Department are joint ones with clinical disciplines.

Salary will be within the appropriate scale with membership of F.S.S.U. The starting salary will be dependent on qualifications and experience.

Application forms and information on conditions of service may be obtained from the Senior Assistant Registrar, The Medical School, University of Nottingham, Nottingham NG7 2RD. Further information on the Department and its current and planned future activities may be obtained from Professor R. E. Coupland at the same address. (24123) 25

Applications are invited for the post of **SENIOR REGISTRAR** in Anaesthetics in the Department of Anaesthetics at the Swindon Group of Hospitals and subsequently at the Nuffield Department of Anaesthetics, Oxford.

Applicants should be in possession of the F.F.A.R.C.S. The appointment is a rotating one based initially at the Princess Margaret Hospital, Swindon, a modern hospital of 524 beds, catering for most types of surgery, and including intensive care. Whilst at Swindon, experience in Anaesthesia for Neurosurgery will be afforded by a regular day release to the department at Oxford. There are excellent library facilities at Princess Margaret Hospital, and time can be allocated for any special study or research.

A maximum of two years will be spent at Swindon before moving to Oxford. The Nuffield Department of Anaesthetics is actively concerned with undergraduate and postgraduate teaching, running courses for both the primary and final F.F.A.R.C.S. examinations, and Senior Registrars are expected to assist with this and other teaching. The department is also actively engaged in research in which Senior Registrars may participate. Attendance at postgraduate meetings and courses is encouraged.

The content of the appointment as a whole will include those aspects of training considered desirable for higher specialist training, and approval for this purpose has now been granted by the Faculty of Anaesthetists.

The appointment will fall vacant on 1st November, 1974 and will be reviewed at the end of the first year. Candidates are invited to visit the respective hospitals by arrangement.

Application forms and further particulars may be obtained from The Medical Staffing Officer, The Manor House, off Headley Way, Headington, Oxford OX3 9DZ. Applications should be submitted by 17th August, 1974. Quoting Reference M61/74. (31878) 52-5

# AYLESBURY AND HIGH WYCOMBE DISTRICTS Department of Mental Health of the Elderly

# CLINICAL ASSISTANT

Up to 9 clinical assistant sessions are available at Tindal General Hospital,  
Aylesbury, the headquarters and assessment unit of the Department of Mental Health  
of the Elderly.

This Department has been in existence for four years and has made rapid  
developments in hospital and community services. There are two consultant  
psychiatrists, and registrars rotate into the Department from the main psychiatric  
hospital. The clinical assistant at present in this post acts as overall co-ordinator of  
the running of the assessment unit, as well as helping with domiciliary and pastoral  
visits.

Though some previous experience in psychiatry would be an advantage it is not  
essential. Arrangements can be made for the holder to be involved in psychiatric  
training locally, in Oxford, or in London; the present holder has obtained both  
D.P.M. and M.R.C.Psych. whilst working in the Department, which has category II  
accreditation from the Royal College.

Mental health of the elderly is an expanding field, yet with few formal training posts  
available, so that this post offers real prospects of further progress if so desired.  
There is a small night duty involvement with the post; this need not involve living-in,  
provided the person appointed is within reasonable distance of Tindal General  
Hospital.

Applications to The Administrative Officer, Tindal General Hospital, Aylesbury,  
Bucks.

Salary £435 per annum per session.

Interested persons are invited to visit the Department by appointment — telephone  
Aylesbury 4351, Ext. 49.

Applicants should state the number of sessions they can offer: six is the minimum  
acceptable number.

The appointment is based in the central clinical research department of one of the most internationally-prestigious Dutch pharmaceutical companies. The clinical research group is expanding its activities because of an increase in the number of original research products under evaluation and development.

The department is international in scope and includes physicians of several nationalities, including British. Each physician works on research projects in therapeutic fields appropriate to his or her own medical background, and is involved in the detailed planning, design, execution and evaluation of clinical trials and human pharmacological studies. The work carries no direct commercial involvement.

The successful applicant will receive any necessary training in the methodology of clinical trials and the interpretation of experimental results, whilst initially working alongside another physician. Thereafter he will assume full responsibility for his own research projects worldwide. This would involve him in travel up to about 15% of his time, mainly in Europe but also intercontinentally.

Candidates, ideally in their late 20's or early 30's, should be qualified medical practitioners, with a strong interest in therapeutics and some postgraduate experience in a hospital, academic or progressive general practice environment. Knowledge of Dutch is not required as English is widely spoken.

The appointment will be based at the Company's research headquarters near a major university city, and it will be possible to live in town or countryside according to preference. Any necessary assistance will be given in finding accommodation and suitable schooling for children.

The starting salary takes good account of experience and qualifications, and is attractive even by continental standards. Particular features of the benefits package include a built-in cost-of-living review twice annually to counter inflation, a holiday bonus and a profit share scheme. Relocation expenses will include reimbursement of the physical costs of removal together with the payment of a generous disturbance allowance.

THE MOST SIGNIFICANT  
ADVANCE IN THE TREATMENT  
OF PARKINSONISM  
SINCE LEVODOPA

# SINEMET

IN THE TREATMENT OF  
PARKINSON'S DISEASE

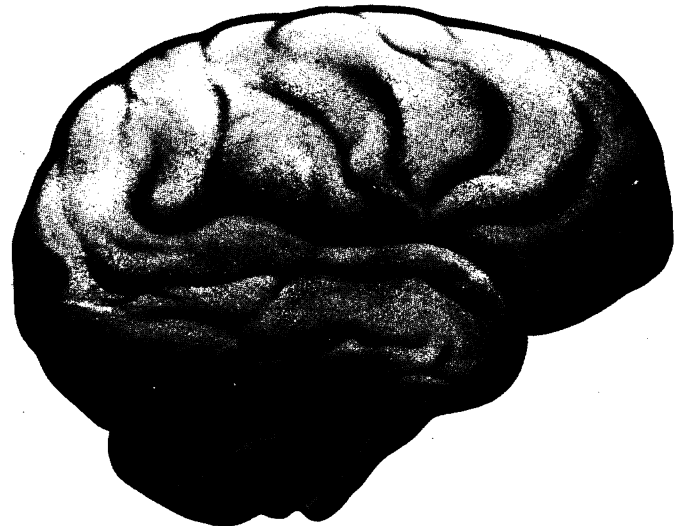

now available

*'Sinemet' contains levodopa, and carbidopa—a new agent discovered by the Merck Sharp & Dohme Research Laboratories. Carbidopa inhibits only the extracerebral decarboxylation of levodopa, making more levodopa available for transport to the brain and subsequent conversion to dopamine.*

**'Sinemet' reduces or eliminates many of the adverse reactions seen in treatment with plain levodopa. With 'Sinemet,' quicker control can be achieved—usually within one week.**

*'... the combination of levodopa with alpha-methyldopa hydrazine [carbidopa] is an effective, rapid, and efficient means of reversing the parkinsonian state.'*

*Trans. Amer. neurol. Ass., 1971, 96, 55*

#### ● HIGHLY EFFECTIVE

'Sinemet' is highly effective at doses approximately one quarter of those needed with plain levodopa.

#### ● RAPID RESPONSE

'Sinemet' offers prompt relief of many of the major symptoms of Parkinson's disease—fully effective doses are usually reached within seven days.

#### ● FEWER SIDE EFFECTS

'Sinemet' usually reduces and in some patients completely avoids certain distressing side effects caused by plain levodopa.

#### ● EASY TO TRANSFER

Patients maintained on levodopa can be easily and quickly transferred to 'Sinemet' with expectation of better results.

# SINEMET®

Carbidopa and levodopa

IN THE TREATMENT OF  
PARKINSON'S DISEASE

'Sinemet' is available as dapple-blue, half-scored, oval tablets, marked 'MSD 654', containing 25 mg carbidopa and 250 mg levodopa, in bottles of 100. Detailed information is available to physicians on request. ® denotes registered trademark.

**One of them  
is a chronic asthmatic...**

# ...maintained on new Bextasol inhaler.

Results with Bextasol inhaler in a double-blind, cross-over clinical trial involving children who "... all had fairly severe asthma interfering with their daily lives ... indicate a good clinical response in terms of daily assessment of symptoms, improvement in lung function, and reduction in additional drug usage in all 20 children in the trial."\*

*\*Archives of Disease in Childhood, 1973, 48, 862*

Bextasol can establish effective prophylactic control of frequently recurring extrinsic and intrinsic asthma in patients of all ages.

Moreover, many of your patients will enjoy greater, better-sustained breathing capacity than on previous therapy. And it is often the only maintenance therapy they will require.

Bextasol inhaler delivers metered micro-doses of betamethasone valerate, a corticosteroid known for its high topical and relatively low

Consequently, Bextasol inhaler offers the unique benefits of corticosteroid control to a much wider range of asthma sufferers.

#### **Presentation**

Bextasol inhaler is a pressurised aerosol containing a suspension of micronised Betamethasone Valerate BP with propellants. The container supplies 200 metered inhalations, each providing 100 micrograms of betamethasone valerate.
