

**Measurement of reversibility of bronchospasm...**

## VENTOLIN SETS A HIGHER STANDARD IN BRONCHODILATOR THERAPY

"...salbutamol (Ventolin) is at present the drug against which all newer bronchodilator drugs must be compared."

(*Practitioner*, 1973, 211, 801)

**EFFECTIVENESS.** Measurement of the effectiveness of a bronchodilator drug in reversing airways obstruction can be achieved with such simple instruments as the Wright Peak Flow Meter or the more recently introduced Peak Flow Gauge. The illustration shows the Peak Flow Gauge in use.

A large number of clinical trials has clearly demonstrated again and again that Ventolin is more effective than other bronchodilators such as isoprenaline and orciprenaline, whilst more recent trials against newer bronchodilator drugs have failed to reveal any significant advantages over Ventolin in this respect.

**SELECTIVITY.** The high degree of selectivity of Ventolin for bronchial muscle, with therapeutic doses

having no discernible effect on the heart, has been an outstanding feature of the clinical trials. In consequence, Ventolin is still the only adrenergic bronchodilator which is indicated for asthmatic or chronic bronchitic patients who also have any form of heart disease or hypertension.

**A LONG DURATION OF ACTION.** In the clinical trials in which the duration of action has been investigated it has been clearly shown that Ventolin, whether given by inhalation or orally, has a duration of at least four hours and usually of 6 to 7 hours.

The availability of Ventolin Spandets means that the patient with nocturnal bronchospasm can be sure of effective bronchodilatation all through the night.

VENTOLIN "... the most widely used bronchodilator drug . . ." (*Brit. med. J.*, 1973, 4, 448)

# IN PAIN, INFLAMED, IMMOBILE-

# INDOCID<sup>®</sup>

## Six merits of 'Indocid'

### Analgesic

'Indocid' can relieve arthritic pain—promptly and effectively. Natural movement is encouraged. By night, the patient can relax and sleep more easily; and during the day, the physical and psychological benefits of reduced pain are considerable.

### Anti-inflammatory

The powerful anti-inflammatory properties of 'Indocid' have been recognised for many years. Some patients respond so well to the reduction of inflammation and swelling that they are able to perform everyday tasks previously seen as impracticable.

### Mobility

By relieving pain, swelling and inflammation, 'Indocid' encourages the patient to attempt more natural movement. 'Indocid' is often an important part of the management of the patient incapacitated by rheumatoid arthritis or osteoarthritis.

### Efficacy

'Indocid' is established as a major antirheumatic agent. Relief of pain, reduction of inflammation, and the progressive increase in mobility—even in some who are severely disabled—enables many to enjoy a more active life.

### Reliability

Many years of clinical use have proved the qualities of 'Indocid'.

### Versatility

'Indocid' has proved valuable against a variety of arthritic conditions, and the number of formulations allow easy dosage adjustment to meet the need of the individual patient.

'Indocid' is indicated in the active stages of—

**Rheumatoid arthritis**

**Osteoarthritis**

**Ankylosing spondylitis**

**Gout**

**Certain acute musculo-skeletal disorders**

In the day and night control of a variety of arthritic conditions

**Fallacy: "Bread is a highly fattening food, providing practically nothing of value in the diet - just carbohydrate."**

**Reality: "Bread is moderate in calories, and therefore no more fattening than the majority of foods in our diets. As well as calories, it provides a wide range of nutrients!"**

Derek Miller, Lecturer in Nutrition at London University

Bread's contribution to the average daily diet.

Protein	17.0%
Calcium	13.4%
Iron	17.7%
Niacin	13.7%
Thiamine (Vitamin B1)	22.1%
Energy value	14.4%

Source: National Food Survey 1972

Many dietitians recommend that a reasonable amount of bread should be included in a calorie-controlled, weight-reducing diet because it provides such important quantities of essential nutrients—and does

so at such low cost. So, if you're cutting down all round, it's particularly important to maintain an adequate intake of protein, energy, the B vitamins, calcium and iron, all of which are provided by bread. A sandwich can provide the equivalent nutrition and calorie-value to a cooked meal—as Dr. Sally Parsonage, nutrition expert writing in the journal *Slimming and Nutrition* (May/June 1974), points out:

*A bowl of tomato soup, 3 oz boiled gammon, gravy, peas and a boiled potato: approximately half a day's requirement of protein, iron, vitamins B1 and C, and a useful contribution of calcium and other B vitamins as well.*

*A sandwich of two slices of buttered bread, 3 oz cheese and a sliced tomato: an equal quantity of protein and all the vitamins in the cooked meal — PLUS half a day's requirement of two more important vitamins, A and D, a little less iron but more calcium.*

## How do you see your slice of bread?

*asks Derek Miller*

In a recent article\* Derek Miller puts bread into perspective. Even — yes — in slimming. "In fact," he writes, "bread provides 70 calories an ounce. It isn't a very high-calorie food, like fats which provide as many as 260 calories an ounce — nor a very low-calorie food. Bread comes some where in between, in company with foods like *meat* — which are usually thought of as slimming."

### One slice of bread lightly buttered: 150 calories

6 oz white fish	150 calories
6 cubes chocolate	150 calories
6 teaspoonfuls sugar	150 calories
1½ oz cheddar cheese	150 calories
6 oz baked beans	150 calories
¾ pint pale ale	150 calories

Derek Miller sums up: "On the basis of calories (and a calorie obtained from bread, or any other food, is no more fattening than a calorie obtained from meat, or fish, or anything else), bread certainly couldn't be considered highly fattening.

"If you're counting calories to lose weight, devising your own diet, or just trying to keep your weight steady, there is no reason why bread should not form an inexpensive and useful ingredient in any varied and healthy diet."

## Are asthmatic attacks ruining her lungs?

Asthmatic attacks can damage lungs.

Sometimes the bronchioles lose their elasticity, the ability to expel phlegm is impaired and there is increased risk of infection.

Sometimes the alveoli themselves may suffer damage.

Aerosol bronchodilators can help, but only when the attack is under way, and there may already be damage.

Only Intal prevents the attack and eliminates these problems.

With Intal, there is no danger of side effects, no risk of misuse and no diminution of therapeutic effect.

Put them on Intal.  
Give them a fighting chance.

**Pulmadil is a unique new bronchodilator for inhalation. It comes from Riker. Seven years have been spent developing Pulmadil. Already over 20 publications have appeared.**

**Pulmadil Inhaler relieves the asthmatic attack very fast indeed. It is exceptionally selective.\***

**Pulmadil is rapidly removed from the blood by uptake into smooth muscle. Unlike long-acting agents it is metabolised by the body's enzyme C.O.M.T. Plasma half-life is under 5 minutes. So there is little if any chance of accumulation should overuse occur.**

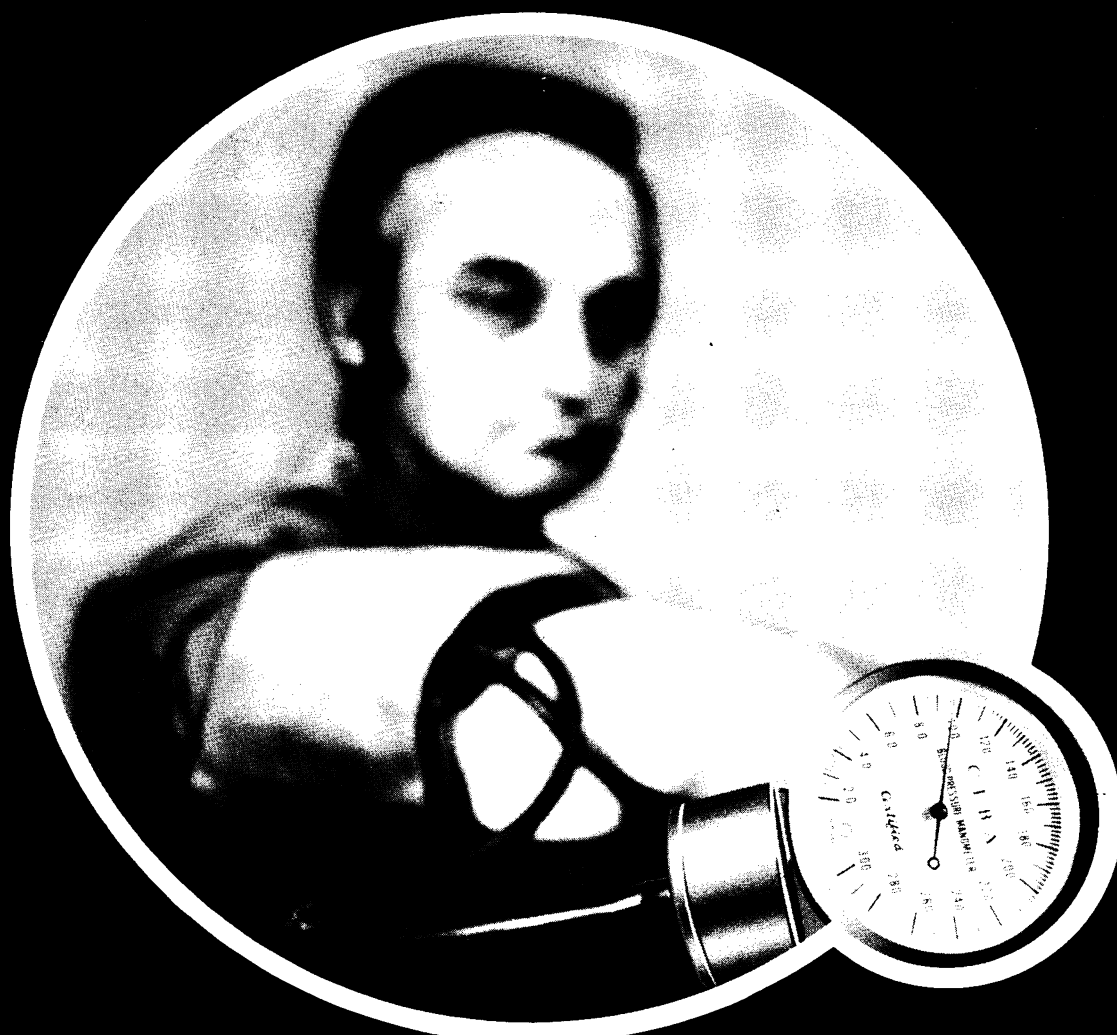

\*Cardiac effect minimal even with 36 inhalations.

*Scandinavian Journal of Respiratory Diseases*  
(1972) 53 : 302

**Composition:** Pulmadil Inhaler and Pulmadil Auto contain a suspension of rimiterol hydrobromide 10 mg/ml. and deliver to the patient 0.2 mg. in each dose. **Indications:** Pulmadil is indicated for the rapid relief of bronchospasm in bronchial asthma and chronic bronchitis. **Dosage:** One or two puffs should provide relief in most cases. This treatment dose should not be repeated in less than one hour. No more than eight treatments should be taken in any 24 hour period. Pulmadil Inhaler and Pulmadil Auto should be administered to children only under the supervision of a responsible adult. **Side-effects:** No side-effects of any significance have been reported. **Contra-indications:** There are no known contra-indications, but Pulmadil should be administered with care to patients with thyrotoxicosis. **Packs:** Pulmadil Inhaler: complete unit (comprising 300 dose vial plus adapter) **RIKER LABORATORIES 3M** Pulmadil Auto: complete unit (comprising 300 dose vial plus cartridge). **LOUGHBOROUGH ENGLAND**

# Before one bad thing leads to another

Acute cystitis is bad enough: temporarily painful, inconvenient and embarrassing. It can also disrupt a busy woman's life, causing absence from work and inability to cope with family problems.

And you'll want to make sure that the initial condition is completely cleared up and does not give rise to a worse problem . . . such as pyelonephritis.

Ceporex can clear up cystitis quickly and decisively; because it is *bactericidal*, destroying most common causative organisms. Against the major ones, *E.coli*, *Proteus mirabilis* and *Klebsiella* spp., it has been shown more effective than ampicillin.<sup>1</sup> Rapidly and almost completely absorbed, and excreted unchanged, Ceporex can render the patient's urine sterile within an hour,<sup>2</sup> allowing inflammation and other distressing symptoms to subside without delay.

Ceporex, with a recorded success rate of 92% in acute cystitis,<sup>3</sup> has minimal side effects and an excellent record of safety.

# Some patients stay on barbiturates until the day they die

Every day in Britain three patients die after deliberately taking overdoses of barbiturates – a total of over 1,000 every year<sup>1</sup>

Virtually all of these patients could have been transferred to Mogadon, which is much safer<sup>2</sup> but just as effective against insomnia<sup>3</sup>

The patients may still have tried to kill themselves. But with Mogadon few, if any, would have succeeded

## Course on Developmental Paediatrics

It is proposed to hold a further course for the academic year 1974/75 in association with Child Health Specialists in the Leeds Region.

The Course will consist of three terms commencing 30th September, 1974. The first term begins with a full week's introduction to the main theme followed by one day per week on Wednesdays at the postgraduate centre at Seacroft Hospital, Leeds. The final term is on a day per week basis except for the last 3 days when a written and clinical examination will take place together with the presentation of dissertations. Successful candidates will be awarded an appropriate certificate.

The first week, 30th September — 4th October, 1974, is a self-contained introductory course to Development Paediatrics, including demonstrations of practical tests. Applications are invited for attendance for this week only. Fee £20.

The outline of the syllabus is as follows:—

- Term I: Development Paediatrics
- Term II: The Child with Physical Handicaps
- Term III: The Child with Emotional and Educational Problems.

The Course is recognized by the Department of Education and Science for the purposes of the Medical Examinations (Subnormal Children) Regulations 1959 and provides valuable in-service training for medical officers wishing to remain in the clinical field of community child health.

Whole Course Fee £150.

Further particulars may be obtained from Professor R. W. Smithells, Department of Paediatrics and Child Health, 27 Blundell Street, Leeds LS1 3ET. (24058)

These include renal, muscle and neuropathology, and selected aspects of immunohistology, histochemistry and cell and organ culture. A high-resolution electron microscope is currently being installed. Ample opportunities exist for research.

**Duties:** The successful applicant will take a share of the routine surgical pathology and autopsy load and will be expected to develop an area of special interest within the department to be agreed upon with the director. He will also be involved in a moderate amount of postgraduate teaching, and will be encouraged to engage in research in his field of special interest.

**Qualifications and experience:** Applicants must hold a medical degree and an appropriate higher qualification in Pathology, both registrable in the State of South Australia. Previous experience in Paediatric Pathology is not essential, but the applicant must be a competent histopathologist. Previous experience in Immunohistology and Electron Microscopy is desirable but not essential.

**Salary:** Within the range of \$A13890 — \$A17960 p.a. (These rates are at present under review).

**Conditions:** Conditions include 5 weeks annual leave, 12 working days sick leave per annum, and three months long service leave after 10 years service. Membership of a generous superannuation scheme is available after a qualifying period. Conditions of service and regulations governing the right of private practice are available, on request, from the Medical Superintendent.

Further information may be obtained from the Director of Histopathology, Dr. R. F. Carter.

Applications in writing, giving full personal details and professional qualifications, together with the names of three referees should be addressed to the Medical Superintendent. (24594) 118

**International Career Opportunities**

The international headquarters of the Boehringer Ingelheim group, situated on the banks of the Rhine near Mainz, and with research laboratories in Germany, France, Austria, Italy, Japan and North America are expanding their international medical department to match the substantial research facilities, which have been particularly successful in the synthesis of original compounds.

We are looking for physicians to work in Germany with experience in the fields of ischaemic heart disease, chronic obstructive airway disease, hypertension, the relief of pain, disorders of the central nervous system and other important fields of medicine.

The tasks involved include: co-ordination of our medical programme worldwide, and provision of expert advice in the particular field of the speciality by keeping abreast of modern thinking and research and by personal attendance at Symposia and Workshops. Playing a role in the conception and realisation of new ideas in therapy, particularly in relation to the marketing needs of individual countries.

Some proficiency in German is desirable and comprehensive tuition in the language for you and your family would be available.

You would join an existing international team and a substantial salary and generous pension scheme are offered, and full assistance for you and your family in relocation in Germany.

Please write in confidence to: Dr. J. H. Shelley, C. H. Boehringer Sohn, Ellesfield Avenue, Southern Industrial Area, Bracknell, Berks. RG12 4YS.

# 'Orudis' in arthritis

## Optimal efficacy and tolerance now further confirmed by two new studies

### Activity equal to that of phenylbutazone

"... in 47 patients with osteoarthritis of the hip, it has been shown that there is little to choose in efficacy between ketoprofen ['Orudis'] 200mg daily and phenylbutazone 300mg daily... Side-effects were mild..."<sup>1</sup>

Comparative clinical studies with indomethacin<sup>3</sup> and ibuprofen<sup>4</sup> have already shown that 'Orudis' affords both significant therapeutic effect and low toxicity in the treatment of arthritis.

1 *Rheumatol. and Rehabil.*, (in press), 1974

2 *Scand. J. Rheumatol.*, (in press), 1974

### Tolerance markedly superior to that of aspirin

"... a trial with gastroscopic examinations has allowed the adoption of the hypothesis that the new anti-inflammatory product ketoprofen ['Orudis'] is better tolerated by the gastric mucosa than acetylsalicylic acid..."<sup>2</sup>

The latest comparisons with two further widely prescribed agents provide additional cogent evidence of its ability to meet the criteria for optimal drug management.

**The hypertensive patient's feeling of well-being...**

# should be protected

BRITISH MEDICAL JOURNAL, 17 AUGUST 1974

Success in treating hypertension depends so much on the co-operation of the patient. He usually feels perfectly well in himself—and obviously he wants to stay that way.

Yet many antihypertensive agents interfere with daily living. But with 'Aldomet', side effects have been infrequent—in particular, dizziness from postural or exertional hypotension rarely occurs.

No wonder 'Aldomet' is prescribed more than any other antihypertensive.

- ☐ lowers blood pressure more physiologically by reducing peripheral resistance
- ☐ usually does not directly affect heart or kidney function
- ☐ other disturbing side effects such as diarrhoea, impotence, or failure to ejaculate are uncommon
- ☐ acts rapidly and smoothly, usually without hazardous drops in blood pressure
- ☐ dosage is simple, and easily established
- ☐ a sedating effect, common in the beginning of therapy, usually disappears on continued treatment

**for effective 24-hour  
control of hypertension**
