

Fungal skin infections should normally be treated at least until the symptoms have completely disappeared. This does not enhance patient compliance and may so hinder the healing process.

But now there is

Sporanox itracopazole

After precisely 15 days of oral treatment, therapeutic concentrations of Sporanox remain active in the stratum corneum for another 3-4 weeks. And yet, its plasma level disappears very rapidly.

Practical dosage:

As a construction of the specific property of the second

. . Call sile daily

ANTIHISTAMINE of exceptional strength

HISMANE
