HISTHONAL

Prescribing information

Uses:
Histonal is a potent long-acting
antihistamine. Histamine
antagonist for the treatment of
seasonal allergic rhinitis, allergic
conjunctivitis, chronic urticaria and other
allergic disorders.

Histonal dose administration:
Adults and children over
12 years: 40 mg once daily.
Children 6-12 years:
20 mg once daily.
Children younger than 6 years:
10 mg once daily.
Histonal tablets.

Histonal should be used in
pregnant women only when,
in the judgement of the
physician, the potential benefits
outweigh the possible hazards.

Adverse reactions:

Weight gain may occur during
prolonged treatment.

Overdosage:

In case of overdose, gastric
lavage should be followed
by close observation and
ECG monitoring as arrhythmias
have occasionally occurred.

ABC OF MAJOR TRAUMA

BMI

EDITED BY
DAVID SKINNER
PETER DRISCOLL
RICHARD EARLAM

The *ABC of Major Trauma* is a comprehensive guide to the early management of the multiply injured patient. All immediately life threatening problems are dealt with, the chapters being written by experts in all of the relevant specialties and by doctors who have day to day experience of treating patients with major injuries in the accident and emergency department. Also covered are the handling of accident victims and their transport to hospital and how to deal with major accidents. Practical guidance is clear and dogmatic to avoid delay in urgent treatment and is relevant to all medical, paramedical, and nursing staff who are concerned with the management of patients from the moment of injury to eventual discharge.

How is no longer a problem — but there's still which and why

The microcomputer revolution has made powerful machines and highly complex programs generally available. This means that users of statistical techniques need no longer be concerned with the arithmetical and algebraic details — the software will take care of all that. What is vital, however, is to understand the ideas and the basic principles of statistical analysis. In *Medical Statistics on Microcomputers* R A Brown and J Swanson Beck show how to get the best use out of microcomputers when analysing data, particularly in the pathology laboratory. They explain the rational basis of various widely applicable statistical methods and also indicate their limitations so that you can make an informed choice. Chapters include:

- Data handling
- Analysis of data from one or two groups
- Comparison of several groups
- Analysis of categorical data
- Statistical methods for diagnostic tests.

Let the BMJ guide you through statistics:

STATISTICS WITH CONFIDENCE — Confidence intervals and statistical guidelines. Martin J Gardner, Douglas G Altman.

Many medical journals, including the *British Medical Journal*, now expect scientific papers submitted to them to contain confidence intervals when appropriate. Why? what are they? and how do you calculate them? *Statistics With Confidence* tells you. A clear explanation of the reasons for using confidence intervals is followed by detailed presentation of methods of calculation, including numerous worked examples and specially compiled tables. To make things even easier, a computer programme, Confidence Interval Analysis (CIA), for calculating confidence intervals, has been specially designed by Martin Gardner and details are available from the Publishing Department, *British Medical Journal* (or the American College of Physicians).

STATISTICS AT SQUARE ONE — T D V Swinscow

The statistical testing of data is indispensable in many types of medical investigation and a help on countless occasions in clinical practice. This book provides step by step instruction. Subjects covered include standard deviation, X^2 tests, t tests, non-parametric tests, and correlation. The book includes sections on Fisher's exact probability test and rank correlation. Methods specially adapted to pocket calculators.

UK £3.95; Abroad £5.00; US\$13.00 BMA members £3.45 or £4.50 ACP members US\$11.00

STATISTICS IN PRACTICE — Sheila M Gore, Douglas G Altman

No doctor can afford to ignore statistics: most modern medical research uses statistics. This important and authoritative book provides clear information on designing studies, applying statistical techniques, and interpreting studies that use statistics. It can be easily understood by those with no statistical training and should be read by all those who want to keep abreast of new developments.

EPIDEMIOLOGY FOR THE UNINITIATED — Geoffrey Rose, D J P Barker

Epidemiology has its own techniques of data collection and interpretation and its necessary jargon of technical terms, and in *Epidemiology For The Uninitiated* the authors guide the novice expertly through the theory and practical pitfalls. The second edition of this popular *BMJ* handbook has been revised to include further details of epidemiological methods and some of their more dramatic applications, such as the investigations on the Spanish cooking oil epidemic, and AIDS.

ABC OF AIDS

SECOND EDITION

EDITED BY
MICHAEL W ADLER

RWJ

January 1991
UK £10.95; Abroad £13.50
(BMA members: £9.95 or £12.50)

The number and range of sexually transmitted diseases have been increasing steadily in the past few years, and the second, revised edition of the *ABC of Sexually Transmitted Diseases*, includes the most up to date figures as well as new chapters on AIDS and psychosexual problems. Doctors need to be aware that common clinical conditions such as rashes, vaginal discharge, and pelvic pain may have a sexual origin and in the new edition of this invaluable handbook Professor Michael Adler gives expert guidance on the diagnosis and management of these conditions.

August 1990
UK £11.95; Abroad £13.50
(BMA members: £10.95; or £12.50)

The lung is the organ most affected by the opportunistic infections that occur in patients with AIDS. Pneumocystis pneumonia occurs in up to four fifths of such patients in Europe and North America, while tuberculosis is a major factor in Africa. As the numbers of patients with AIDS increase, respiratory physicians throughout the world are more likely to be concerned in their management. In *AIDS and the Lung* experts review the problems, emphasising practical points and providing up to date information on this rapidly changing subject.

September 1990
UK £8.95; Abroad £10.00
(BMA members: £8.45 or £9.50)

BMA House—yours for £155

Actual size 22" deep x 29½" wide

Why not treat yourself to a memento of the *BMJ*'s 150th anniversary? Specially commissioned to mark the occasion, David Gentleman's beautifully detailed lithograph of BMA House, the journal's home since 1925, is obtainable at £155 a copy. Showing a view of the courtyard from the main gates—a familiar scene to BMA members and to countless visitors from around the world—the lithograph has been produced in a limited edition and only 125 copies are available for sale. Many readers will want to have this handsome reminder of a milestone in the *BMJ*'s history; to make sure of yours, simply fill in the form below.

gastric distress & oesophagitis hyperacidity or dysmotility?

Most complaints of gastric distress, as well as oesophagitis, are conventionally attributed to hyperacidity in the stomach. However, the contemporary view in gastroenterology holds that most upper G.I. problems, including heartburn, postprandial fullness, early satiety, abdominal distension and epigastric discomfort, are commonly motility related.¹⁻³ And this stands to reason. After all, proper peristalsis is a physiological necessity for our digestive process.

Prepulsid, the novel G.I. prokinetic, uniquely restores healthy peristalsis to efficiently clear the oesophagus and empty the stomach.⁴⁻⁶

Prepulsid
CISAPRIDE

TRADEMARK

restores upper G.I. motility like no other agent.

expertise in digestive motility

References: 1. Knutt, J.E. et al. Dig Dis Sci 29: 194 (1984); 2. Karilas, J.P. et al. Gastroenterology 91: 897 (1986); 3. Malagelada, J.R. et al. Gastroenterol 88: 1223 (1985); 4. Ceccatelli, P. et al. Gut 29: 631 (1988); 5. Collins, B.J. et al. Hepato-Gastroenterol 34: 113 (1987); 6. Jan, R. et al. Dig Dis Sci 34: 657 (1989).

Prescribing information - Prepulsid (cisapride) is a gastro-intestinal prokinetic agent. Prepulsid enhances and co-ordinates gastro-intestinal propulsive motility, thereby preventing stasis and reflux. **Therapeutic indications:** 1. Gastroesophageal reflux disorders, including oesophagitis. 2. Symptoms of X-ray or endoscopy negative upper digestive discomfort. 3. Gastro-oesophageal reflux disorders, including oesophagitis. 4. Intestinal pseudo-obstruction. **Contra-indications:** No absolute contra-indications are known. **Precautions:** Although, in animals, there is no effect on primary fertility, no primary embryotoxic and no teratogenic effect, the anticipated therapeutic benefits should be weighed against the potential hazards before Prepulsid is given during pregnancy, especially during the first trimester. Nursing mothers: Although the excretion in breast milk is minimal, nursing mothers are advised not to breast feed while taking Prepulsid. **Driving and machine-operating ability:** Prepulsid does not affect psychomotor function and does not induce sedation or drowsiness. Prepulsid may, however, accelerate the absorption of drugs from the small bowel may be diminished, whereas absorption of drugs from the stomach may be diminished. **Interactions:** The acceleration by Prepulsid of gastric emptying may affect the rate of absorption of drugs. **Adverse reactions:** The effects of Prepulsid on gastro-intestinal motility are mediated by the stimulation of the smooth muscle of the gastrointestinal tract. The stimulation is mediated by the stimulation of the smooth muscle of the gastrointestinal tract. The stimulation is mediated by the stimulation of the smooth muscle of the gastrointestinal tract. **Severe reactions:** There have been isolated reports of convulsive seizures without clearcut relationship to Prepulsid. **Dosage:** Adults: according to the severity of the condition, 5 or 10 mg of Prepulsid, 2 to 4 times daily, to be taken as tablets or as oral suspension (the full plastic 5 ml spoon contains 5 mg). As a rule the following doses have proven adequate: • less severe conditions: 5 mg i.d. (before the 3 main meals and before retiring). • infants and children: on the average 0.2 mg/kg per intake, 3 to 4 times daily. For the suspension intakes are indicated on the dosing pipet as a function of body weight. **Full prescribing information available on request.**
