

What's best for patients?

New drugs are continually being developed and knowledge about existing drugs is constantly expanding, so it is essential, but difficult, for doctors to keep up to date with the latest developments. *New Drugs* describes the most important therapeutic advances of the past decade and discusses the drugs that will be in common use in the 1990s. Completely revised and updated, this second edition has been expanded to include 11 additional chapters. Its coverage of practical aspects of drug use, avoidance of adverse reactions and interactions, and prescribing at extremes of age makes it an invaluable guide for busy practitioners who want to get the best out of the new drugs currently available.

Chapters include: Adverse reactions to drugs • Calcium antagonists • Diuretic treatment • Antiarrhythmic drugs • Insulin • Lipid lowering drugs • Antidepressant drugs • Centrally acting drugs • Controlling symptoms in advanced cancer

Second edition April 1991

UK £14.95; Abroad £18.00 (BMA members £13.95 or £17.00)

Doctors do not always agree on what is the right treatment even for quite common conditions. Often definitive clinical trials have not been performed and no one knows for sure the best way to treat. *Controversies in Therapeutics* looks at some problems that arise in general practice. For each one it offers two different approaches; and Peter Rubin, professor of therapeutics and consultant physician at the University Hospital of Nottingham, provides an editorial comment on these which summarises the prevailing views and helps you to make up your own mind. Written by academic experts with everyday clinical experience, *Controversies in Therapeutics* is a must for all physicians and general practitioners—both those who think they know it all and those who know they don't.

Chapters include: Role of diet in treating atopic eczema • Risks of dependence on benzodiazepine drugs • Thrombolysis and the general practitioner • Depression in childhood • Theophylline in the management of airflow obstruction • Management of constipation

January 1991

UK £9.95; Abroad £12.00 (BMA members £8.95 or £11.00)

Calculate with confidence

CIA software

Confidence Interval Analysis (CIA) is a computer program that takes the sweat out of calculating confidence intervals. Devised by Martin Gardner, professor of medical statistics, MRC Environmental Epidemiology Unit, University of Southampton. The program is menu driven with easy access to each chapter and to the method required within each chapter. Topics covered include calculating confidence intervals for:

- means and their differences
- proportions and their differences
- regression and correlation
- non-parametric analyses

For each method relevant intermediate statistics and the required confidence interval are produced on the screen. Complete with its own manual, the program may also be used in conjunction with the book *Statistics with Confidence*, which provides numerous worked examples. The software is available for IBM compatibles on either a 5¼" or a 3½" disk.

Price: £65.00. Educational establishments, research institutes, and the NHS — £45.95. Prices include VAT in the UK and air mail despatch abroad.

The book *Statistics with Confidence – Confidence intervals and statistical guidelines* is available price £7.95 in the UK and £9.50 abroad (BMA members £7.45 and £9.00, respectively)

ORDER FORM BRITISH MEDICAL JOURNAL, PO Box 295, London WC1H 9TE, England

Please send me copy/copies of *Confidence Interval Analysis (CIA)* at £65.00 (full price) or £45.95 (educational establishments, research institutes, and the NHS).

Suddenly it happens: can you cope?

Injury is an enormous problem in Western society. It is the commonest cause of death among those aged under 35, and about 100 people die each week in road traffic accidents in Britain. Hospital staff have to manage about 500,000 patients with injury who are admitted each year, often with multiple injuries requiring urgent treatment.

The *ABC of Major Trauma* is a comprehensive guide to the early management of the multiply injured patient. All immediately life threatening problems are dealt with, the chapters being written by experts in all of the relevant specialties and by doctors who have day to day experience of treating patients with major injuries in the accident and emergency department. Also covered are the handling of accident victims and their transport to hospital and how to deal with major accidents. Practical guidance is clear and dogmatic to avoid delay in urgent treatment and is relevant to all medical, paramedical, and nursing staff who are concerned with the management of patients from the moment of injury to eventual discharge.

March 1991

UK £12.95; Abroad £15.00 (BMA members £11.95 or £14.00)

The second edition of the *ABC of Resuscitation* incorporates the latest standards and guidelines for cardiopulmonary resuscitation issued by the Resuscitation Council (UK) in 1989. The are three new chapters—one on trauma, one on resuscitation in late pregnancy, and one on avoiding HIV infection—and throughout, recommendations have been updated where necessary and other revisions have been made in view of current theory and practice. Written by members of the Resuscitation Council (UK) and other invited experts, the new edition of *ABC of Resuscitation* offers the most up to date information and advice on this vital aspect of health care.

Review of the first edition

"This book represents a major achievement on the part of the Resuscitation Council and the *British Medical Journal* and must be essential reading for every practising doctor, and especially those in the 'front-line' of pre-hospital care." *BASICS, Journal of the Association for Immediate Care*

Second edition 1990

UK £6.95; Abroad £9.00 (BMA members £6.45 or £8.50)

In spinal cord injury correct management from the outset is vital to prevent further damage. But what is the correct management? The *ABC of Spinal Cord Injury* sets it out step by step: how the injured patient should be moved from the scene of the accident; the assessment of his injuries; transfer to a spinal treatment centre; immediate medical problems and later complications; and the specialised nursing, physiotherapy, and occupational therapy that are essential in helping the patient and his family adjust to what may be a lifetime of disability. A valuable introduction to a topic that non-specialists need to know more about.

Third impression 1990

UK £7.95; Abroad £9.00 (BMA members £7.45 or £8.50)

A selection of American College of Physicians books available now from the BMJ

ACP

We are pleased to announce that books published by the American College of Physicians are now available from the *BMJ*, with the exception of North America and Mexico.

Common Diagnostic Tests: Use and Interpretation—second edition

EDITED BY HAROLD C SOX, JR, MD, FACP

This second edition contains revised and updated chapters and completely new chapters on diagnostic reasoning, thyroid function tests, and glycemia tests. Among the tests covered are routine chest radiographs, blood cultures, carcinoembryonic antigen tests, and throat cultures and rapid tests for diagnosis of A streptococcal pharyngitis.

400 pages

UK £19.00/Abroad £21.00 (BMA members £17.00 or £19.00)

Guide for Adult Immunization—second edition

AMERICAN COLLEGE OF PHYSICIANS

This guide is an indispensable reference for those concerned with the immunisation needs of adults and adolescents. The second edition has an expanded section on travel, a completely revised chapter on immunocompromised adults (including those with HIV infection), and updated material on the efficacy of influenza and hepatitis B vaccines. The guide focuses on such factors as age, occupation, lifestyle, environmental risk, and compromised hosts, any one of which may call for special vaccines. With tables, appendixes, and an index, plus an expanded bibliography, the *Guide* is a convenient reference for the busy practitioner.

Providing Quality Care: The Challenge to Clinicians

EDITED BY NORBERT GOLDFIELD, MD, DAVID B NASH, MD, MBA

Quality assurance has become a major issue in health care. Nine chapters by prominent medical experts critically discuss case-mix and quality-of-care measures, information systems as quality measures, and the relationships between quality assurance programmes and malpractice. Commentary reflecting the clinician's perspective follows each chapter.

Drug Prescribing in Renal Failure: Dosing Guidelines for Adults—second edition

WILLIAM M BENNETT, GEORGE R ARONOFF, THOMAS A GOLPER, GAIL MORRISON, IRWIN SINGER, D CRAIG BRATER

Biochemical and physiologic factors for determining drug dosage in patients with renal failure are presented in easy to read tables. Text and tables detail bioavailability distribution, metabolism, renal excretion, pharmacokinetics, dosimetry, therapeutic monitoring, and adverse reactions. The guidelines are organised by drug category. Major categories include: anti-microbial agents; antihypertensive and cardiovascular agents; sedatives, hypnotics, and drugs used in psychiatry and analgesics.

Hospital Clinical Privileges: Guidelines for Procedures in Gastroenterology and Nephrology

AMERICAN COLLEGE OF PHYSICIANS

First in a series of guidelines on clinical competence in specific medical procedures, this book defines the "minimum criteria" for competent performance of eight procedures, four each in gastroenterology and nephrology. An essential aid for anyone faced with the task of granting hospital clinical privileges, the guidelines were first published as separate articles in *Annals of Internal Medicine* in 1987 and 1988. Written by the Clinical Privileges Project Steering Committee of the American College of Physicians, each article discusses a specific procedure and defines training requirements and the level of competence needed to perform the procedure. Recommendations for when procedures should and should not be used as well as technical and cognitive criteria are given in tabular form.
