Are the ills of middle and later life rooted in our early development?

During the past few years a series of articles, mostly from the Medical Research Council's Environmental Epidemiology Unit at the University of Southampton, has been published in leading medical journals. They set out the evidence that certain adult diseases, including coronary heart disease, stroke and diabetes originate in impaired development during fetal life and infancy. Because of the obvious implications for prevention of some of the commonest diseases in Western society, they have attracted international attention. In this book, Professor David Barker, Director of the Unit, has selected 31 articles that he considers seminal and a comprehensive guide to the development of this important topic. Professor Roger Robinson's introduction summarises and interprets the evidence for non-epidemiologists.

The first chapters describe the origins of the hypothesis in geographical studies in England and Wales. These are followed by a series of studies of men and women in middle and late life whose early growth was recorded at the time. In those who have died, cause of death can be related to early growth. Examination of the living has allowed blood pressure, blood lipid and insulin concentrations, and other measurements to be related to different patterns of early growth. Together, the findings show that early development affects the risk of coronary heart disease, stroke, obstructive lung disease and diabetes at least as strongly as obesity, smoking and other aspects of adult life style.

Fetal and Infant Origins of Adult Disease brings together in one volume a body of work that cannot be ignored

Hardback • Illustrations • Tables • 368 pages • ISBN 0-7279-0743-3

UK £24.95; Abroad £30.00 (BMA members £22.95 or £28.00) including postage, by air abroad

Rights and Responsibilities of Doctors

SECOND EDITION (1992)

Doctors have rights and responsibilities and duties and powers which require them to do or not to do certain things in certain circumstances. Doctors' actions, as well as being governed by their professional code, are also regulated by a variety of legislation with which they must comply. Examples include the various Public Health Acts, the Misuse of Drugs Act, the Human Fertilisation and Embryology Act, the Data Protection Act, the Access to Health Records Act, and so on. As well as United Kingdom legislation, doctors are increasingly being affected by laws emanating from the European Community.

Rights and Responsibilities provides a practical guide to the law as it affects doctors. It aims to cover the main areas that are of interest and concern to most doctors. Designed as a handbook, the style affords easy access to individual topics and offers succinct but

comprehensive advice. As well as doctors, medical students, health service administrators, lawyers with an interest in medical law, local authority officers, and others with an interest in the legal aspects of medicine will find this book invaluable.

ISBN 0 7279 0753 0 226 pages
Price: Inland £10.95

The Unacceptable Face of Science

Fraud exists, both in academic medical research and in drug trials in general practice. This important new book sets out the evidence, reviewing events since 1975 when the first notorious case of fraud became public knowledge.

The problem is viewed from many perspectives, with contributions from a general practitioner, head of an academic unit, contract research company director, statistician, editor and lawyer. Together, their information provides a compelling account of the extent to which fraud and misconduct have been and continue to be practised in medicine.

Contents include:

- fraud in general practice
- statistical aspects of detection
- the British Pharmaceutical Industry's response
- legal aspects
- the French scene
- the Danish scene
- data audits in trials and their implications for misconduct
- fraud and the editor

Fraud and Misconduct in Medical Research is a valuable practical text for all researchers – and ultimately anyone who practises medicine.
