

SURGICAL ROOTS & BRANCHES

Sir Reginald Murley

When Sir Reginald Murley became president of the Royal College of Surgeons in July 1977 he was described in the *Daily Telegraph* as a "redoubtable standard bearer" and as "one of the dwindling number of old style 'surgical characters'". In *Surgical Roots & Branches* he gives a lively account of the development of this character.

FESTINA LENTE – A PSYCHIATRIC ODYSSEY

Henry R Rollin

Henry Rollin insists that *Festina Lente* is "in no way an autobiography. I prefer to regard it essentially as an history of psychiatry during the past half century as seen by one who has been witness to and played some small part in the shaping of events."

UK £14.95 (BMA Members £13.95);
Abroad £17.50 (BMA Members £16.50)

NOT A PROPER DOCTOR

David Sinclair

Sinclair was intent on a career in surgery when he graduated from St Andrew's University but fate, mainly in the shape of the second world war, decreed otherwise. As Professor Sinclair looks back at his varied life, there are moments of joy, sadness and regret, but throughout a central core of humour and compassion.

Abroad £18.50 (BMA Members £17.50)

NOT A MOMENT TO LOSE

Sir David Smithers

Sir David Smithers believes that "one should aspire to be a realist, but retain a sense of wonder, a rationalist who is prepared to jump to conclusions, and a critical visionary who remains sensible of the humour of the human situation."

UK £14.95 (BMA Members £13.95);
Abroad £17.50 (BMA Members £16.50)

ONE MAN'S MEDICINE

Archie Cochrane with Max Blythe

The autobiography of Professor Archie Cochrane, who was one of Britain's most influential thinkers on health care and the quality of health services. His 30 years' association with the Rhondda Fach – and his work there on reducing the suffering inflicted on whole communities by pneumoconiosis – is almost legendary.

UK £14.95 (BMA Members £13.95);
Abroad £19.00 (BMA Members £18.00)

REAP A DESTINY – DIVAGATIONS OF A TAOIST

Douglas Swinscow

Former deputy editor of the *BMJ*, the late Douglas Swinscow was also a world authority on lichens. A painstaking scientist and a lover of the arts, a philosopher who nevertheless thrived in a military role, these memoirs look back at the events and choices that have shaped his life and character.

UK £14.95 (BMA Members £13.95);

"Value judgments about food are being made all the time—they are nearly always subjective and usually wrong." A Stewart Truswell, Boden professor of human nutrition at the University of Sydney, separates fact from fallacy in the *ABC of Nutrition*. This fully revised and updated edition offers the general medical reader a refreshingly down to earth review of all aspects of nutrition—from anorexia to obesity, infant feeding to dietary guides for the elderly—and will be invaluable for doctors and other medical professionals wishing to advise patients about their eating habits.

Review of the first edition

"Truswell . . . has written *the* introductory textbook for students of nutrition at any level . . . All physicians, medical students, nurses, nursing students, dieticians, dietician students, and those interested in nutrition education should have a copy of this book."

UK £8.95; Abroad £10.50 (BMA members £8.45 or £10.00)

Healthy women with normal pregnancies need little formal care; those at risk of damage to their own or their baby's health need the best of scientific medicine. The aim of antenatal care is to distinguish between these two groups, giving those who need it the full range of diagnostic and therapeutic measures while avoiding unnecessary intervention in those whose pregnancy proceeds normally. In the *ABC of Antenatal Care* Geoffrey Chamberlain, professor and chairman of the department of obstetrics and gynaecology at St George's Hospital Medical School, London, outlines the practicalities of routine antenatal care and the management of the major medical problems that may arise. Originally published as a series of articles in the *BMJ*, this manual discusses with common sense and humour the background to current practice and indicates how it could be improved in the 1990s.

Chapters include

- Normal antenatal management • Detection and management of congenital abnormalities • Work in pregnancy • Medical problems in pregnancy • Preterm labour

Are the ills of middle and later life rooted in our early development?

During the past few years a series of articles, mostly from the Medical Research Council's Environmental Epidemiology Unit at the University of Southampton, has been published in leading medical journals. They set out the evidence that certain adult diseases, including coronary heart disease, stroke and diabetes originate in impaired development during fetal life and infancy. Because of the obvious implications for prevention of some of the commonest diseases in Western society, they have attracted international attention. In this book, Professor David Barker, Director of the Unit, has selected 31 articles that he considers seminal and a comprehensive guide to the development of this important topic. Professor Roger Robinson's introduction summarises and interprets the evidence for non-epidemiologists.

The first chapters describe the origins of the hypothesis in geographical studies in England and Wales. These are followed by a series of studies of men and women in middle and late life whose early growth was recorded at the time. In those who have died, cause of death can be related to early growth. Examination of the living has allowed blood pressure, blood lipid and insulin concentrations, and other measurements to be related to different patterns of early growth. Together, the findings show that early development affects the risk of coronary heart disease, stroke, obstructive lung disease and diabetes at least as strongly as obesity, smoking and other aspects of adult life style.

Fetal and Infant Origins of Adult Disease brings together in one volume a body of work that cannot be ignored

FRAUD AND MISCONDUCT IN MEDICAL RESEARCH

EDITED BY
STEPHEN LOCK
FRANK WELLS

BMJ

Fraud exists, both in academic medical research and in drug trials in general practice. This important new book sets out the evidence, reviewing events since 1975 when the first notorious case of fraud became public knowledge.

The problem is viewed from many perspectives, with contributions from a general practitioner, head of an academic unit, contract research company director, statistician, editor and lawyer. Together, their information provides a compelling account of the extent to which fraud and misconduct have been and continue to be practised in medicine.

Contents include:

- Fraud in general practice
- Statistical aspects of detection
- The British Pharmaceutical Industry's response
- Legal aspects
- The French scene
- The Danish scene
- Data audits in trials and their implications for misconduct (USA)
- Fraud and the editor

Fraud and Misconduct in Medical Research is a valuable practical text for all researchers – and ultimately anyone who practises medicine.

Essential handbook of vascular diseases

Vascular problems are common – so much so that they are often forgotten and sometimes overlooked – and the incidence of vascular disease has increased to epidemic proportions. But along with this increase has come the rapid development of new methods of diagnosis and treatment. Successful management now requires cooperation among many hospital specialists – vascular surgeons, general surgeons, radiologists, neurologists, cardiologists, orthopaedic surgeons, and general physicians – as well as paramedical staff. A key figure in the equation is the general practitioner, who has a vital part to play throughout. The *ABC of Vascular Diseases* draws together the contributions of all these, condensing years of experience into brief chapters with clear practical messages. Aspects covered include the assessment of severity of disease and medical and radiological treatment as well as surgery. Both early and late complications are covered in detail, making this an essential handbook for everyone concerned in the treatment and rehabilitation of patients with vascular disease.

Journal of Medical Screening

Editor: Nicholas Wald
Wolfson Institute of Preventive Medicine

Associate Editors include:

J Chamberlain (UK), N E Day (UK), J E Haddow (US), M Law (UK)

Journal of Medical Screening is a new quarterly journal to be launched in January 1994 by the BMJ Publishing Group to cover all aspects of medical screening and advance the science of the discipline. The journal aims to bring together specialist groups conducting screening research and establish a liaison with health authorities and policy developers. The philosophy of the journal is that screening should be about the prevention of disability and disease, not simply the early detection of disease as an end in itself.

SUBMISSION

Papers should be submitted to:
Professor Nicholas Wald
Wolfson Institute of Preventive Medicine
Medical College of St. Bartholomew's Hospital
Charterhouse Square, London EC1M 6BQ, United Kingdom
Tel: 44 71 982 6269 Fax: 44 71 982 6272

Instructions to Authors may be obtained by returning the form below

The Journal Aims to Cover:

Principles and theory of medical screening

Research into screening methodology

Development of new screening tests and their quantitative evaluation

All aspects of public health as they relate to screening, including epidemiology, randomised trials, quantitative observational studies, demonstration projects and economic evaluations

Ethical and psychological issues

Management issues

Policy and strategy

What do we really know about editorial peer review in scientific publication?

**Something,
but not enough.**

- We know that peer review is widely used, but how widely?
- We know that peer review suffers from bias and conflicts of interest, but what biases and conflicts really matter? And how do we get rid of them?
- We fear that peer review suppresses innovation, but to what extent?
- We know that peer review has existed for years without scientific proof of its worth, but will it hold up under the same rigor and scrutiny we demand of science itself?

To answer many of these questions, editors, scientists, and scholars will gather to present and discuss research findings at the Second International Congress on Peer Review in Biomedical Publication, September 9-11, 1993, at the Fairmont Hotel in Chicago, Illinois.

The Second International Congress on Peer Review in Biomedical Publication

September 9-11, 1993 Chicago, Illinois

Topics will include

- The mechanisms of peer review and editorial decision making in different journals, including blind review
- The relationships between authors, editors, and reviewers, and how each is educated, selected, and evaluated
- Allocation of responsibility for published material and the meaning of authorship
- Quality assurance and standards for reviewers and editors
- Breakdowns, weaknesses, and biases in the system
- Conflicts of interests
- Fraud and scientific misconduct
- Peer review of grant proposals

The subject of the Congress is biomedical publication, but scholars in other disciplines are urged to participate, so that we may examine editorial peer review in the context of the overall scientific enterprise.
