SOUNDINGS FROM BMJ COLUMNISTS

- doctors as ideal party guests
- being propositioned by a patient
- making your own gunpowder
- appointments committees
- hospital architecture
- breast implants
- trees
- the royal touch

Each week in the BMJ the regular columnists of the "Soundings" page - two general practitioners, three hospital doctors, three journalists - expound wittily, passionately, or forcefully on matters relating to medicine and the world at large. This selection brings together a choice of contributions from a year's "Soundings" by Trisha Greenhalgh, Julie Welch, Bernard Dixon, Colin Douglas, James Owen Drife, George Dunea, Tony Smith, and David Widgery.

Highly personal and eloquently expressed, these opinion pieces will entertain, inform, and exasperate you by turns.

Journal of Medical Screening

Editor: Nicholas Wald

Wolfson Institute of Preventive Medicine

Associate Editors include:

J Chamberlain (UK), N E Day (UK), J E Haddow (US), M Law (UK)

Journal of Medical Screening is a new quarterly journal to be launched in January 1994 by the BMJ Publishing Group to cover all aspects of medical screening and advance the science of the discipline. The journal aims to bring together specialist groups conducting screening research and establish a liaison with health authorities and policy developers. The philosophy of the journal is that screening should be about the prevention of disability and disease, not simply the early detection of disease as an end in itself.

SUBMISSION

Papers should be submitted to:

Professor Nicholas Wald

Wolfson Institute of Preventive Medicine

Medical College of St. Bartholomew's Hospital

Charterhouse Square, London EC1M 6BQ, United Kingdom

Are the ills of middle and later life rooted in our early development?

During the past few years a series of articles, mostly from the Medical Research Council's Environmental Epidemiology Unit at the University of Southampton, has been published in leading medical journals. They set out the evidence that certain adult diseases, including coronary heart disease, stroke and diabetes originate in impaired development during fetal life and infancy. Because of the obvious implications for prevention of some of the commonest diseases in Western society, they have attracted international attention. In this book, Professor David Barker, Director of the Unit, has selected 31 articles that he considers seminal and a comprehensive guide to the development of this important topic. Professor Roger Robinson's introduction summarises and interprets the evidence for non-epidemiologists.

The first chapters describe the origins of the hypothesis in geographical studies in England and Wales. These are followed by a series of studies of men and women in middle and late life whose early growth was recorded at the time. In those who have died, cause of death can be related to early growth. Examination of the living has allowed blood pressure, blood lipid and insulin concentrations, and other measurements to be related to different patterns of early growth. Together, the findings show that early development affects the risk of coronary heart disease, stroke, obstructive lung disease and diabetes at least as strongly as obesity, smoking and other aspects of adult life style.

Fetal and Infant Origins of Adult Disease brings together in one volume a body of work that cannot be ignored

ABC FROM THE BMJ

"Value judgments about food are being made all the time—they are nearly always subjective and usually wrong." A Stewart Truswell, Boden professor of human nutrition at the University of Sydney, separates fact from fallacy in the *ABC of Nutrition*. This fully revised and updated edition offers the general medical reader a refreshingly down to earth review of all aspects of nutrition—from anorexia to obesity, infant feeding to dietary guides for the elderly—and will be invaluable for doctors and other medical professionals wishing to advise patients about their eating habits.

Review of the first edition

"Truswell . . . has written the introductory textbook for students of nutrition at any level . . . All physicians, medical students, nurses, nursing students, dieticians, dietitian students, and those interested in nutrition education should have a copy of this book."

American Journal of Clinical Nutrition

Second edition March 1992

Paperback • ISBN 0 7279 0315 2 • 120 pages
UK £8.95; Abroad £10.50 (BMA members £8.45 or £10.00)

Healthy women with normal pregnancies need little formal care; those at risk of damage to their own or their baby's health need the best of scientific medicine. The aim of antenatal care is to distinguish between these two groups, giving those who need it the full range of diagnostic and therapeutic measures while avoiding unnecessary intervention in those whose pregnancy proceeds normally. In the *ABC of Antenatal Care* Geoffrey Chamberlain, professor and chairman of the department of obstetrics and gynaecology at St George's Hospital Medical School, London, outlines the practicalities of routine antenatal care and the management of the major medical problems that may arise. Originally published as a series of articles in the *BMJ*, this manual discusses with common sense and humour the background to current practice and indicates how it could be improved in the 1990s.

Chapters include

- Normal antenatal management • Detection and management of congenital abnormalities • Work in pregnancy
- Medical problems in pregnancy • Preterm labour

January 1992

Paperback • ISBN 0 7279 0313 6 • 96 pages
UK £9.95; Abroad £12.00 (BMA members £8.95 or £11.00)

What do we really know about editorial peer review in scientific publication?

Something, but not enough.

- We know that peer review is widely used, but how widely?
- We know that peer review suffers from bias and conflicts of interest, but what biases and conflicts really matter? And how do we get rid of them?
- We fear that peer review suppresses innovation, but to what extent?
- We know that peer review has existed for years without scientific proof of its worth, but will it hold up under the same rigor and scrutiny we demand of science itself?

To answer many of these questions, editors, scientists, and scholars will gather to present and discuss research findings at the Second International Congress on Peer Review in Biomedical Publication, September 9-11, 1993, at the Fairmont Hotel in Chicago, Illinois.

The Second International Congress on Peer Review in Biomedical Publication

September 9-11, 1993 Chicago, Illinois

Topics will include

- The mechanisms of peer review and editorial decision making in different journals, including blind review
- The relationships between authors, editors, and reviewers, and how each is educated, selected, and evaluated
- Allocation of responsibility for published material and the meaning of authorship
- Quality assurance and standards for reviewers and editors
- Breakdowns, weaknesses, and biases in the system
- Conflicts of interests
- Fraud and scientific misconduct
- Peer review of grant proposals

The subject of the Congress is biomedical publication, but scholars in other disciplines are urged to participate, so that we may examine editorial peer review in the context of the overall scientific enterprise.

American Medical Association

PUBLISHING GROUP

Journal of Neurology, Neurosurgery and Psychiatry

EDITOR: R A C HUGHES

Journal of Neurology, Neurosurgery and Psychiatry

Focus on clinical neurology, neurosurgery, neuropsychology, neuropsychiatry and closely related experimental work. Established in 1920, features include editorials, full-length scientific papers, short reports and letters. The 1993 volume will contain a series of reviews of **Neurological Emergencies**. Each issue presents an editorial concerning a recent advance or area of current controversy. The journal includes the proceedings of the meetings of the Society of British Neurological Surgeons and the Association of British Neurologists. Essential reading for clinical neurologists, neurosurgeons and psychiatrists, and for nonclinical research workers in related fields, the **Journal of Neurology, Neurosurgery and Psychiatry** aims to provide not only a reference to be consulted in every medical library but also an up-to-date statement of advances in the field, which all neuroscientists will want to have on their desks.

Members of the European Neurological Society and the Association of British Neurologists may subscribe to the journal at the reduced rate of £82, (full price £163) and members of the American Academy of Neurology can subscribe for \$150.

FORTHCOMING PAPERS:

- **Infarct topography and hemiparesis profiles with cerebral convexity infarction: the stroke data bank**
J P Mohr, M A Foulkes, A T Polls, D B Hier, C S Kase, T R Price, T K Tatemichi, P A Wolf
- **Dementia of frontal lobe type: neuropathology and immunohistochemistry**
D M A Mann, P W South, J S Snowden, D Neary
- **Intracranial tumours that mimic transient cerebral ischaemia: lessons from a large multicentre trial**
R J Coleman, J M Bamford, C P Warlow (for UK TIA Study Group)
- **A randomised controlled trial of domiciliary and hospital-based rehabilitation for stroke patients after discharge from hospital**
J R F Gladman, N B Lincoln, D H Barer
- **Miller Fisher syndrome is associated with serum antibodies to GQ1b ganglioside**
H J Wilson, J Veltch, G Paterson, P G E Kennedy
