ABC OF DERMATOLOGY

SECOND EDITION

PK BLUXTON

ISBN 0 7279 0758 1 2nd edition May 1993
UK £12.95; Overseas £15.00
(BMA members £11.95; £14.00)

ISBN 0 7279 0763 8 3rd edition March 1993
UK £7.95; Overseas £9.50
(BMA members £7.45; £9.00)

ABC OF SPINAL CORD INJURY

SECOND EDITION

DAVID GRUNDY
ANDREW SWAIN

ISBN 0 7279 0760 3 2nd edition January 1993
UK £8.95; Overseas £11.00
(BMA members £7.95; £10.00)

ABC OF COLORECTAL DISEASES

EDITED BY
D J JONES
M H IRVING

ISBN 0 7279 0755 7 April 1993
UK £12.95; Overseas £15.00
(BMA members £11.95; £14.00)

BASIC MOLECULAR AND CELL BIOLOGY

The study of disease at the molecular and cellular level is revolutionising medicine. Already spectacular progress has been made in identifying the genes involved in some diseases and in understanding cancer pathogenesis, opening up exciting new possibilities for treatment. In *Basic Molecular and Cell Biology* leaders in the field explain the techniques of molecular and cell biology, which are being applied in specialties as far apart as cardiology and diabetes, and describe their implications for medicine. It will enable doctors, students, and researchers to gain a basic understanding of the subject and some insight into the way in which the medical sciences will be moving over the next few years.

This second edition has been extensively updated and expanded, with four new chapters added.

CONTENTS INCLUDE:

- › Molecular and cell biology in clinical medicine: introduction
David Weatherall
- › The polymerase chain reaction: a tool for molecular medicine
A F Markham
- › Gene regulation
David S Latchman
- › Genes and cancer
Richard G Vile, Myra O McClure, Jonathan N Weber
- › An introduction to cells
Lewis Wolpert
- › The cell nucleus
R A Laskey
- › Sorting signals and cellular membranes
Graham Warren

Authoritative texts to help save lives

"...excellent for teaching purposes... a good example of how to present a subject in a clear and pithy fashion."

Canadian Medical Association

"...highly recommended for personal purchase as well as departmental and ward libraries."

Journal of the Royal Naval Medical Service

"... an attractive and authoritative review of state of the art blood transfusion practices."

Clinical & Laboratory Haematology

"...an extremely well written practical guide to transfusion for clinicians and medical students."

Anaesthesia and Intensive Care

"Clear layout, admirable illustrations, easy reading. Recommended."

Annals of the Royal College of Surgeons

1992 Second Edition

UK £12.95; Abroad £14.50

(BMA members £11.95 or £13.50)

"...crammed with current information...an excellent book which makes a major contribution to trauma care...authors and editors are to be congratulated."

BASICS

"... an excellent manual for those dealing with trauma. Until now there has been no concise text of this sort ..."

BMJ

"This book is a pleasure...richly and superbly illustrated, particularly well written, and of considerable value to basic and advanced readers in trauma... clear, clinical and practical. It belongs... on the trauma unit bench as a rapidly accessible manual for in-service training."

SAMJ

UK £12.95; Abroad £15.00

(BMA members £11.95 or £14.00)

Many doctors, including those in training, care for patients in the intensive care unit. Too often such doctors do not know the details of ventilation techniques; yet if they are to feel at home on the intensive care unit they must be familiar with all aspects of assisted ventilation.

In this short comprehensive guide to the subject thoracic physicians, intensive care specialists, and anaesthetists take the reader through from the theory, equipment, and techniques to the latest advances in non-invasive and domiciliary ventilation.

UK £8.95; Abroad £11.00

(BMA members £8.45 or £10.50)

Are the ills of middle and later life rooted in our early development?

During the past few years a series of articles, mostly from the Medical Research Council's Environmental Epidemiology Unit at the University of Southampton, has been published in leading medical journals. They set out the evidence that certain adult diseases, including coronary heart disease, stroke and diabetes originate in impaired development during fetal life and infancy. Because of the obvious implications for prevention of some of the commonest diseases in Western society, they have attracted international attention. In this book, Professor David Barker, Director of the Unit, has selected 31 articles that he considers seminal and a comprehensive guide to the development of this important topic. Professor Roger Robinson's introduction summarises and interprets the evidence for non-epidemiologists.

The first chapters describe the origins of the hypothesis in geographical studies in England and Wales. These are followed by a series of studies of men and women in middle and late life whose early growth was recorded at the time. In those who have died, cause of death can be related to early growth. Examination of the living has allowed blood pressure, blood lipid and insulin concentrations, and other measurements to be related to different patterns of early growth. Together, the findings show that early development affects the risk of coronary heart disease, stroke, obstructive lung disease and diabetes at least as strongly as obesity, smoking and other aspects of adult life style.

***Fetal and Infant Origins of Adult Disease* brings together in one volume a body of work that cannot be ignored**

Journal of Medical Screening

Editor: Nicholas Wald

Wolfson Institute of Preventive Medicine

Associate Editors include:

J Chamberlain (UK), N E Day (UK), J E Haddow (US), M Law (UK)

Journal of Medical Screening is a new quarterly journal to be launched in January 1994 by the BMJ Publishing Group to cover all aspects of medical screening and advance the science of the discipline. The journal aims to bring together specialist groups conducting screening research and establish a liaison with health authorities and policy developers. The philosophy of the journal is that screening should be about the prevention of disability and disease, not simply the early detection of disease as an end in itself.

SUBMISSION

Papers should be submitted to:

Professor Nicholas Wald

Wolfson Institute of Preventive Medicine

Medical College of St. Bartholomew's Hospital

Charterhouse Square, London EC1M 6BQ, United Kingdom

Tel: 44 71 982 6269 Fax: 44 71 982 6272

The Journal Aims to Cover:

Principles and theory of medical screening

Research into screening methodology

Development of new screening tests and their quantitative evaluation

All aspects of public health as they relate to screening, including epidemiology, randomised trials, quantitative observational studies, demonstration projects and economic evaluations

Ethical and psychological issues

Management issues

Policy and strategy

What do we really know about editorial peer review in scientific publication?

Something, but not enough.

- We know that peer review is widely used, but how widely?
- We know that peer review suffers from bias and conflicts of interest, but what biases and conflicts really matter? And how do we get rid of them?
- We fear that peer review suppresses innovation, but to what extent?
- We know that peer review has existed for years without scientific proof of its worth, but will it hold up under the same rigor and scrutiny we demand of science itself?

To answer many of these questions, editors, scientists, and scholars will gather to present and discuss research findings at the Second International Congress on Peer Review in Biomedical Publication, September 9-11, 1993, at the Fairmont Hotel in Chicago, Illinois.

The Second International Congress on Peer Review in Biomedical Publication

September 9-11, 1993 Chicago, Illinois

Topics will include

- The mechanisms of peer review and editorial decision making in different journals, including blind review
- The relationships between authors, editors, and reviewers, and how each is educated, selected, and evaluated
- Allocation of responsibility for published material and the meaning of authorship
- Quality assurance and standards for reviewers and editors
- Breakdowns, weaknesses, and biases in the system
- Conflicts of interests
- Fraud and scientific misconduct
- Peer review of grant proposals

The subject of the Congress is biomedical publication, but scholars in other disciplines are urged to participate, so that we may examine editorial peer review in the context of the overall scientific enterprise.
