

Advanced Paediatric Life Support

The Practical Approach

THE PRACTICAL GUIDE TO THE EMERGENCY CARE OF CHILDREN

Advanced Paediatric Life Support: The Practical Approach gives detailed, easy to follow directions on management during the crucial first hour of care in all common emergencies in children. The book is divided into sections on:

- Basic and advanced life support
- Management of the seriously ill child
- Management of the seriously injured child
- Practical procedures

Written by paediatricians, paediatric surgeons, specialists in accident and emergency medicine, and anaesthetists, the book is an integral component of the Advanced Paediatric Life Support course, which aims to raise the standard of the emergency care of children. It will help all doctors, nurses, and paramedics to deal confidently with seriously ill and injured children.

What's wrong with medical education?

Many medical graduates are unprepared for the realities of being a doctor. After five years of absorbing factual information, their creative thinking and problem solving skills are poor. Something is wrong with the way students are being taught.

In *Medical Education* Stella Lowry has put together the current views from the

profession, the GMC's recent review, and a national consensus inquiry by the King's fund. She examines issues such as:

- Selecting and assessing students
- Changing curricula
- Improving the quality of teaching
- Reorganising the preregistration year

The arguments and proposals for improvement are explained clearly, enabling all those involved in teaching medicine – virtually all doctors – to contribute to the debates. The book also provides a valuable insight, for teachers and students alike, into the way forward for medical education.

THE UNACCEPTABLE FACE OF SCIENCE

Fraud exists, both in academic medical research and in drug trials in general practice. This important new book sets out the evidence, reviewing events since 1975 when the first notorious case of fraud became public knowledge.

The problem is viewed from many perspectives, with contributions from a general practitioner, head of an academic unit, contract research company director, statistician, editor and lawyer. Together, their information provides a compelling account of the extent to which fraud and misconduct have been and continue to be practised in medicine.

Contents include:

- Fraud in general practice
- Statistical aspects of detection
- The British Pharmaceutical Industry's response
- Legal aspects
- The French scene
- The Danish scene
- Data audits in trials and their implications for misconduct (USA)
- Fraud and the editor

Fraud and Misconduct in Medical Research is a valuable practical text for all researchers – and ultimately anyone who practises medicine.

A vertical strip of a repeating geometric pattern. The pattern consists of stylized human figures, each with arms raised and hands joined to the neighbors, forming a continuous chain. The figures are arranged in a grid-like fashion, with their heads and bodies forming a series of interlocking shapes. The entire pattern is rendered in black on a white background, creating a high-contrast, rhythmic visual effect.

What do we really know about editorial peer review in scientific publication?

Something, but not enough.

- We know that peer review is widely used, but how widely?
- We know that peer review suffers from bias and conflicts of interest, but what biases and conflicts really matter? And how do we get rid of them?
- We fear that peer review suppresses innovation, but to what extent?
- We know that peer review has existed for years without scientific proof of its worth, but will it hold up under the same rigor and scrutiny we demand of science itself?

To answer many of these questions, editors, scientists, and scholars will gather to present and discuss research findings at the Second International Congress on Peer Review in Biomedical Publication, September 9-11, 1993, at the Fairmont Hotel in Chicago, Illinois.

The Second International Congress on Peer Review in Biomedical Publication

September 9-11, 1993 Chicago, Illinois

Topics will include

- The mechanisms of peer review and editorial decision making in different journals, including blind review
- The relationships between authors, editors, and reviewers, and how each is educated, selected, and evaluated
- Allocation of responsibility for published material and the meaning of authorship
- Quality assurance and standards for reviewers and editors
- Breakdowns, weaknesses, and biases in the system
- Conflicts of interests
- Fraud and scientific misconduct
- Peer review of grant proposals

The subject of the Congress is biomedical publication, but scholars in other disciplines are urged to participate, so that we may examine editorial peer review in the context of the overall scientific enterprise.
